WHITE CRAPE MYRTLE

FRUITLAND NURSERIES

ESTABLISHED 1856

AUGUSTA, GEORGIA

A Partial Bird's-eye View of our Nursery

Field Investigations in Hortology

RECEIVED

OCT 10 1910

Introduction

Answered

We have been growing trees, shrubs and plants at Fruitland Nurseries for more than fifty years. The Nurseries were established in 1856. The attention of Mr. P. J. Berckmans, the founder of Fruitland Nurseries, was attracted to the neighborhood of Augusta not only by the delightful climate, but by the many advantages it possessed for an enterprise like Fruitland Nurseries. Here may be grown the finest and most vigorous specimens of most of the fruits and ornamentals that thrive in the North, as well as those which serve their greatest usefulness in the South.

Augusta is just about the dividing line of the North and South in matters horticultural. Evergreens and other hardy trees and shrubs grown by us have demonstrated their adaptability to a wide range of territory.

Aside from the climate advantages which we have, the Fruitland Nurseries are particularly well off in the matter of soil. In our home tract of 400 acres, located west of and adjoining the limits of the city of Augusta, on Washington road (a continuation of Broad street), and one and one-half miles from the terminus of the Lake View Electric Car Line, we have soils of almost every texture to be found anywhere, ranging from stiff clay to the most friable sand. We are thus enabled to grow everything in the character of soil best adapted to it.

In addition to the home location, we have a 240-acre farm, ten miles away, constituted largely of new land and now almost entirely planted in nursery stock. On our home farm, also, more than thirty acres are devoted to orchards and test grounds. Our nurseries now contain more than twenty-five acres of roses, over one hundred acres of evergreens and deciduous trees and shrubs, and about three hundred acres of fruit trees and small fruits and vines.

In our greenhouse and plant department we have a total of in excess of 60,000 square feet of glass. Every appliance of proved merit which affords an economy of labor and adds to the production of healthy stock is utilized. An area of 50,000 square feet of coldframes allows us to carry through the winter a large stock of plants which do not require artificial heat in our mild climate. Our trees and plants in point of quality and a perfect adaptability to a wide range of climate, as well as in size, health and vigor, are equal to those produced by any other nursery establishment in the United States.

If it were not immodest, we might successfully claim that in many lines we offer a superior grade of stock not obtainable anywhere else. We ship to almost every part of the United States, and our foreign trade reaches such distant points as Australia, China, Japan, Africa, the East and West Indies, Brazil, the Bermudas and every section of Europe and North and South America. It is not our object to grow or offer cheap stock, such as is so often palmed off on the public. Within the last few years the cost of production has increased rapidly, until in many cases it has fully doubled. The market price of stock in many instances is equaled by the cost of production, owing to the rapid advance in the price of labor and materials; therefore, when quality of products is considered, our prices will be found as low as those of any first-class nursery.

Catalogue will be mailed free on application. This Descriptive Catalogue of Fruit and Shade-Trees, Grape-vines, Evergreens, Roses, Flowering Shrubs, Palms, etc., is issued annually in August.

P. J. BERCKMANS COMPANY (Incorporated)

Drawer 1070, AUGUSTA, GA.

Landscape and Engineering Department. In this department are handled all questions that may arise with our patrons as to the improvement of private estates, city lots, public grounds, parks, cemeteries, etc. Topographical surveys are made, grading and planting plans furnished, and consultations given on such subjects as tree-moving, planting, pruning and trimming, preparation of soil for special purposes, road, driveway and walk building, drainage and sewage disposal.

Our charges for services are as moderate as is consistent with good work and results, and all work entrusted to us is carefully executed by experienced men under direct supervision of the firm.

It is a pleasure to us to answer inquiries from our patrons concerning the improvement of their grounds. For further information as to the work of this department, refer to page 15.

Suggestions

Always address all communications to P. J. BERCKMANS COMPANY, Drawer 1070, Augusta, Ga., and not to individuals.

Note. All quotations are for immediate acceptance subject to stock being sold. No liability to attach to us where frost, drought or other casualties beyond our control prevent delivery of stock that may be contracted for.

ORDER NOW.—Do not wait until you are ready to plant. Frequently orders sent late in the season cannot be filled in full. Send us your order now; it will be carefully filed until you desire it shipped. When making out your order, write the full and correct name of the article desired, as given in catalogue. Give size and catalogue price. Never give local names of plants, as different plants frequently have the same local names.

NAME AND ADDRESS.—Always write your name plainly upon order sheet in catalogue. A lady should always sign herself Miss or Mrs., and always use the same initials.

Give your post office, county and state, also street or post office box number, and the name of your nearest express office.

EXPRESS.—In all cases when possible, we advise our customers to have their goods forwarded by express. Plants, trees, etc., are now taken by the leading express companies at a reduction of 20 per cent from the regular merchandise rate.

SHIPPING DIRECTIONS.—Give plain and explicit directions for shipping. If by freight, state route. When no directions are given, we shall use our best judgment in forwarding; but in all cases shipments are at purchaser's risk after receipt is taken from the transportation company. Freight and express rates will be given on application.

PACKING.—We have every appliance for packing in the best possible manner. A large force of thoroughly trained men are entrusted with this labor.

All domestic orders packed free; but on export orders there will be a packing charge at actual cost, as these export orders require large quantities of specially prepared packing material, and entail much extra labor and care.

TERMS OF PAYMENT.—Cash with order, or satisfactory reference before shipment; or, if preferred, will ship goods with Bill of Lading attached to Sight Draft, through express or bank. On all C. O. D. and Sight Draft orders we require 25 per cent of the bill remitted before shipment.

REMITTANCES.—Remittances should be made by Post Office or Express Money Orders, or by checks on Augusta or New York. As our banks charge exchange on checks on all points except Augusta and New York, please add one-fourth of one per cent on private checks. We cannot be held responsible for losses when remittances are not made as directed above. Cash sent through the mails is at sender's risk. **Make all remittances payable to P. J. Berckmans Company.**

WE GUARANTEE every tree or plant to be in a perfectly healthy condition, up to grade and first-class in every respect when leaving our hands, but after delivering to forwarders, all losses resulting from delays or exposures in transit are at risk of purchaser.

PRICES.—Orders for 100 or 1,000 trees in the aggregate, but comprising several classes, are billed as follows: 40 trees of a class, at 100 rate; less than 40, at 10 rate; 400, at 1,000 rate.

RESERVING ORDERS.—When purchasers desire these to be reserved for weeks or months after the opening of the shipping season, they must be paid for in full at the time of ordering.

ERRORS.—We exercise the utmost care in filling orders, and always put in more than is ordered, but during the rush of the busy season, an error is occasionally made, and satisfactory correction will be promptly made upon notification. Keep a copy of your order for comparison. All claims for errors must be made **within five days** after receipt of goods, otherwise they will not be entertained.

CLUB ORDERS, or those for parks and cemeteries, will be given special rates on application.

RESPONSIBILITY.—We have no connection whatever with any other nursery, and our responsibility extends only to persons purchasing direct from us. We also disclaim any responsibility for failure arising from defective planting, or from subsequent faulty treatment or cultivation, and we are not in any respect responsible for any loss or damage arising from any failure therefrom. While we exercise the greatest care to have all of our trees and plants true to name, well-grown and packed in the best possible manner, and hold ourselves in readiness to replace all trees and plants that may accidentally prove untrue to label, free of charge, or refund the amount paid therefor, it is mutually understood and agreed between the purchaser and ourselves that our guarantee of genuineness shall not in any case make us liable for any sum greater than that originally received for such trees or plants as prove untrue.

SHIPPING FACILITIES.—Augusta being the terminal point of seven lines of railroad, and two lines of steamers upon the Savannah river, enables us to secure low rates of freight to all points.

SHIPPING SEASON.—This usually commences about the middle of October, or as soon as the plants are sufficiently dormant to lift with safety, and for all open-ground trees and plants continues until the middle of March, or until the buds begin to swell. Pot-grown plants can be safely sent out any time of the year.

INSECTS AND DISEASES.—Our Nurseries are free from these. Certificate of State Entomologist is attached to every shipment.

FUMIGATION.—We fumigate our stock with hydrocyanic acid gas before shipping, as required by state law, so that assurance from freedom of insects or diseases of any kind is made doubly sure.

Hints for Planters

Preparation of the Soil. The most desirable soil for fruit trees is a rich loam, naturally dry or made so by drainage. Peaches and plums must be planted on high, well-drained soil. Before planting, prepare the land by thoroughly plowing and subsoiling, first using a two-horse plow, followed by a subsoil plow. Lay off the rows at required distances, and dig holes at least two feet wide and two feet deep; fill the holes by breaking in the sides, commencing at the bottom and going upward. Use surface soil in filling up, and with this mix one or two shovelfuls of thoroughly decomposed barnyard manure; or use one or two pounds of good bone meal. All fertilizers must be thoroughly incorporated with the soil. Avoid the contact of the roots with heating manures.

Selection of Trees. For this climate, experience has taught us that one- and two-year-old trees of thrifty growth (except peaches, only one-year trees of which should be planted) are the most desirable. Purchasers should bear in mind that such trees can be removed from the nursery with all their roots, whereas a four- or five-year-old tree cannot be taken up without cutting away a large portion of them. Success in transplanting is increased according as attention is paid in selecting well-rooted trees, instead of heavily-branched ones. Give as many sound roots, and as little head to a tree as possible.

Preparation of Trees. Before planting, remove the broken roots, cut back one-year peach, apple, pear, cherry and plum trees to a naked stem $1\frac{1}{2}$ to 2½ feet high, leaving no side branches. Two-year-old trees should have their branches cut back to half their length, or less; the lower limbs less than those above, cutting in shorter as you go upward, leaving the leader the longest. (For pruning peach trees, see page 7.) The tree should be set about 2 inches deeper than it stood in the nursery.

Time for Planting. In this climate, vegetation, although inactive in winter for the formation of leaves and new wood,

is never so as to new roots. A tree transplanted in November or December will, by the ensuing spring, have formed sufficient new roots to give it a firm hold in the ground, and will grow off rapidly when active vegetation commences. Plant as early after the first killing frost as practicable, although hardy stock can be safely transplanted any time during the winter when the ground is not too wet or frozen.

Cultivation. To get good results from your trees, keep them well cultivated. Stir the soil frequently during the summer. Remove all suckers and branches which start below the head of the tree. For the first two years, cultivate the orchard in some hoed crop suited to the location, such as cotton, vegetables, melons, peas, or any similar crop. Cultivate frequently. Never plant corn or small grain in your orchard if the soil is of light character, but for stiff soils devoid of humus, sow rye, clover, or barley in fall, using a suitable fertilizer. Turn under this cover crop in spring, and drill in peas. If soil is devoid of lime and potash, supply the deficiency with bone meal, hardwood-ashes, or a good commercial fertilizer. You cannot get a healthy growth on your trees unless the orchard is supplied with the proper plant-food.

Care of the Trees on Arrival. If not ready to plant on arrival, unpack without exposing the roots to cold or air, dig a trench, and heel-in by carefully covering the roots with earth, and give a copious watering. Trees thus treated can remain in the trenches until ready for planting in the orchard. If frozen when received, do not open the boxes, but place them in a cellar or some cool, dark room that is free from frost and let them remain until all frost is drawn out. If no cellar or frost-proof room, bury the box in saw-dust or dirt until thawed. The point is to get the frost entirely out without sudden exposure of stock to heat, light or air. Even if frozen solid, the stock will not be injured if handled in this manner.

Injurious Insects

The rapid increase of insects injurious to fruit and fruit trees necessarily compels the horticulturist to obtain a knowledge of their habits, that he may provide means to oppose their ravages; otherwise he must remain at their mercy, and find that paying crops become more and more uncertain. The limits of this catalogue allow only space for the enumeration of the most destructive and abundant species which infest the orchards and vineyards, and the best remedies as suggested by leading entomologists. The following remedies are compiled from the latest recommendations,

APPLES

Apple Worm (*Carpocapsa pomonella*, or Codling Moth). Spray with arsenate of lead at the rate of two pounds to fifty gallons of water, and Bordeaux mixture (six pounds lime, three pounds bluestone), the first spraying to be applied just before the calyx closes, and the second from seven to eight weeks later, when the brood appears. This gives the best results from an economic standpoint. It is generally conceded that earlier or later sprayings than mentioned above are of no value against the first brood, when dealing with the codling-moth. Bordeaux, not being strictly an insecticide, does not act against the codling moth, but it is always well to use it with arsenate of lead to prevent apple scab or other fungous diseases.

Borer (*Saperda candida*). Examine trees in spring and again in June and dig out the grubs with a wire. Then wash the collar of roots and parts of the body with a mixture of lime and sulphur.

Caterpillar (*Clisiocampa Americana*). Destroy nests as soon as they appear in spring by burning, or spray with Paris green eight ounces, lime one pound, water fifty gallons.

Spring Canker Worm (*Paleacrita vernata*). Encircle the tree with a canvas belt coated thoroughly with tar or train oil; or spray with six ounces Paris green and one pound lime to fifty gallons Bordeaux or water.

Woolly Aphis (*Schizoneura lanigera*). For above-ground colonies, wash trees with solution of whale-oil soap or kerosene emulsion. For root-inhabiting colonies, remove the soil to a depth of about three inches, or sufficient to partially expose the roots; open a circle from four to eight feet in diameter, depending on the spread of the roots, distribute three to eight pounds of tobacco dust or use 15 per cent kerosene emulsion. Enough emulsion should be used to saturate the soil to a depth of three or four inches. Recent experiments have shown that kerosene emulsion may be used with success. Tobacco dust is of more value as a preventive and fertilizer. Badly infested trees should receive kerosene treatment.

PEACHES AND PLUMS

Peach Tree Borer (*Sanninoidea exitosa*). The old method of worming peach trees during winter has been found ineffective, principally because the worms cause too much damage before being removed.

In the spring remove the earth from about the body of the tree down to the crown, scraping off gummy exudations, and carefully search for the borer. For this work, use a farrier's knife, or a tool especially made for working peach trees.

An excellent wash for borers is the following: One bushel of quick lime, twenty pounds of sulphur, one gallon of coal-tar, fifty gallons of water. Mix tar and sulphur in ten gallons of water and add lime. Stir well while slaking. When it is en-

tirely slaked, dilute the above to fifty gallons, and apply this wash to the tree, allowing it to run well down upon the roots. As soon as it is applied, draw up the earth to the trees so that it will form a cone about six inches above the level. A second application of this wash should be applied during August. During the last of October, remove the mound of earth from around the tree and thoroughly scrape the bark as in the spring and give another application of the wash. This is vigorous treatment, but it is effective.

Curculio (*Conotrachelus nenuphar*). To prevent the depredation of this pest, see remedial measures under head of "Brown Rot" on page 4.

San Jose Scale (*Aspidiotus perniciosus*). This attacks peach, pear, apple, quince, cherry, raspberry, rose and a number of other trees and shrubs. For winter treatment, we would recommend spraying with lime-sulphur solution. Spray in December and again late in February or early March if the orchard is badly infested. For summer treatment would suggest spraying with kerosene emulsion, one part of emulsion to five of water, or use the regular strength of lime-sulphur solution, applying this with a brush to the trunks and larger limbs only. None of this mixture should be put on the foliage or young growth.

Other Scale Insects, of which there are several species, which are more or less destructive to fruit or other trees, can be eradicated by the use of kerosene emulsion, whale-oil soap or Larkin's Sulpho-Tobacco Soap.

(Note.—If your trees are infested with any insects or fungous diseases, send infested portion to your Experiment Station, your State Entomologist, or United States Entomologist, at Washington, D. C.)

JAPANESE PERSIMMONS, WALNUTS AND PECANS

Borer (Prionus). These bore through the roots and usually destroy the tree; and must be carefully removed. Carefully examine collar of tree in winter and midsummer, and apply lime and sulphur wash.

Caterpillar (*Catocala maestosa*). Feeds on the leaves of pecans, and is sometimes quite injurious; spray with Paris green, four ounces, lime one pound, to fifty gallons of water.

Pecan Bud Worm (*Proteopteryx Deludana*). Spray the trees just as the buds are opening, with arsenate of lead, three pounds to fifty gallons of water, and repeat application ten days later. If the worms appear again in June or July repeat the treatment. This will also help control the pecan case borer.

Twig Girdlers (*Oncideres cingulatus*). All limbs that have been girdled and have fallen must be burned at once, thus destroying all future broods of sawyers.

GRAPE-VINES

Borer (Prionus). Its presence is manifested by the unhealthy appearance of the vine. Search must be made at the roots and the grub destroyed.

Flea Beetle (*Hallica Chalybea*). Dust leaves with dry lime.

Grape Curculio (*Coeliodes inoqualis*). Paris green or arsenate of lead solution as a spray, as soon as fruit is set.

Leaf Hopper (*Erythroneura vitis*). Passing with a torch between the rows in the evening and shaking the vines to disturb the insects.

Leaf Folder (*Desmia funeralis*). Kerosene emulsion, or Paris green, or arsenate of lead as a spray.

Phylloxera. Various insecticides are recommended, but must be applied below the ground with the aid of specially constructed apparatus.

Dangerous Fungous Diseases

Apple Tree Blight may be treated similarly as for pears, but fewer applications are required.

Black Rot in Grapes. Spray with copper sulphate solution in spring before buds swell. When leaves appear, spray with Bordeaux; repeat twice at intervals of ten to fourteen days. Dusting with flowers of sulphur as soon as fruit is set, and repeat every ten days until coloring, is advisable for mildew, but if Bordeaux mixture is used early it will lessen the appearance of the latter.

Black Knot in Plums. Cut off the affected branches below affected parts, and burn to prevent its spreading. Spray with Bordeaux mixture.

Brown Rot on Peaches, Plums and Nectarines. Brown Rot and Curculio work together; therefore, the following treatment is recommended for Brown Rot and Curculio.

Apply the first spraying about the time the calyxes are shedding, using two pounds of arsenate of lead, three pounds of lime to fifty gallons of water. Apply the second spraying three weeks later, using the self-boiled lime and sulphur and arsenate of lead. Prepare as follows: Eight pounds lime, eight pounds sulphur and two pounds of arsenate of lead to fifty gallons of water. Make the sulphur into a thin paste, and then add the lime to the sulphur paste mass, and add water from time to time as the lime slakes in order to keep the mixture from becoming too thick to stir well. The boiling process should be permitted to continue until the lime is all slaked, which will be fifteen or twenty minutes, when it should be checked by the addition of cold water.

The arsenate of lead should be rubbed into a thin paste by adding water slowly while stirring with a paddle until it is worked into a thin sloppy paste, and should be added to the diluted lime-sulphur solution the last thing before spraying. Make the third application about four weeks after the second, using the self-boiled lime sulphur without the arsenate of lead. If the curculio is very numerous and the foliage shows no injury

from the second previous application, arsenate of lead may be added to the self-boiled lime sulphur at the third spraying. Three applications of the above spray will give best results.

Peach and Plum Rosette. Root up and burn the affected tree as soon as the disease is observed.

Peach Leaf Curl (*Eroascus deformans*). Spray with Bordeaux (4-6-50) during late fall or at least one month before the fruit buds open; when trees are thoroughly covered, only one application is necessary to prevent this disease. Recent experiments indicate that fall spraying will control leaf curl as well as early spring treatment, if trees are well coated. If spraying has not been done and the disease appears, continuous cultivation and the application of nitrogenous manures will throw off the diseased leaves and save the fruit crop. In case of San Jose scale in the same orchard, the lime and sulphur solution may be used effectively against both scale and leaf curl at one spraying. We recommend spraying with lime and sulphur as late as possible, and pruning out disease persistently when it occurs.

Pear Blight. The following preventive measures are recommended: As buds are swelling, spray with copper solution; as blossoms fall, Bordeaux mixture (3-9-50) and arsenites; eight to twelve days later repeat application and use Bordeaux mixture ten to fourteen days later, and again ten to fourteen days later, if necessary. If blight has occurred, cut off and burn all affected limbs to prevent spreading. During winter, carefully remove all blighted twigs, and pay particular attention to removing all blight occurring in main limbs or branches. Send for bulletin on "Control of Pear Blight," which can be secured from the Bureau of Plant Industry, Washington, D. C., or from the State Board of Entomology, Atlanta, Ga. Disinfect the pruning shears.

Rust on Raspberries and Blackberries. Spray with copper sulphate solution before buds break. Use Bordeaux mixture if rust appears in spring or summer.

Fungicide and Insecticide Solutions and Formulae

Arsenate of Lead can be used as a substitute for Paris green and London purple. It can be used much stronger with less danger of injury to plants. Two pounds to fifty gallons of water will give good results against most biting insects.

Bordeaux Mixture. Copper sulphate, four pounds; quick-lime, six pounds; water, fifty gallons. Dissolve the copper sulphate by putting it in a bag and hanging it in a wooden or earthen vessel holding twenty-five gallons; slake the lime gradually and add water until you have twenty-five gallons. The blue-stone mixture and lime should then be poured into the pump so that the two streams will mix thoroughly as they fall. Bordeaux mixture will not keep more than twenty-four hours. Remember this.

Copper-Sulphate Solution. Dissolve one pound of copper-sulphate in fifteen gallons of water. Do not apply this solution to foliage; it must be used before buds break on grape-vines and peach trees. For the latter, use twenty-five gallons of water.

Kerosene Emulsion. One-half pound of soap dissolved in one gallon of water; add to this, while hot, two gallons of kerosene. (The boiling soap solution should be removed from the fire before the kerosene is added.) Churn violently with a spray pump or garden syringe until the mass becomes of the consistency of butter. Dilute the above mixture with from nine to fifteen parts of water when using, so that it will not be stronger than one part of oil to nine to fifteen of water. Sour milk may be used instead of soap.

Larkin's Sulpho-Tobacco Soap is a universal insecticide. A sure and safe exterminator of all kinds of insects and vermin on plants, shrubby vines, small fruits and trees. It also acts as a powerful fertilizer; plants that have wilted from the ravages of insects will regain their freshness and grow luxuriantly. The soap is non-poisonous and absolutely safe to handle. It will not injure the tenderest growth.

Lemon Oil. We have found this an invaluable insecticide for all plants grown in a greenhouse or in pots. Plants should be dipped in a solution of suitable strength. While it kills all scale insects, it is not injurious to the most tender plants.

Lime and Sulphur Wash. Lime, unslaked, twenty pounds; sulphur, ground, sixteen pounds; water, to make fifty gallons. Place eight to ten gallons of water in an iron kettle over a fire, and when it reaches the boiling point add the sulphur and mix thoroughly, then add the lime, which will immediately produce a violent boiling. From time to time add a small quantity of water as needed to prevent boiling over or burning. The sulphur gradually goes into solution, and the mixture, at first thick

and pasty, becomes thinner and thinner, changing in color through several shades of yellow. After boiling at least one and a half hours, the mixture should be diluted to the proper amount by the addition of sufficient hot water. If a suitable boiler is convenient, the mixture may be more economically cooked in barrels or tanks by the use of steam.

The lime and sulphur wash is now generally recommended for controlling the San Jose scale, and in some respects is superior to the other remedies named.

Napha Soap and Nicoticide. One ounce of soap and one-quarter ounce of nicotidine to each gallon of water. It is advisable to have the water at 100 degrees Fahrenheit. This is an excellent spray for Red Spider.

Paris Green. Actively poisonous. Add four ounces Paris green, one pound fresh lime, to fifty gallons of water. Paris green and Bordeaux mixture may be applied together without the action of either being weakened.

Land Plaster. With fifty pounds of land plaster mix one pint of crude carbolic acid. Sprinkle over vines for beetles and aphides.

Pyrethrum. One ounce of the "Bubach" powder, add to two gallons of cold water, on any plant used for food, as this is non-poisonous.

Sulphur, one pound; one pound of air-slaked lime, and boil it in eight quarts of water until the concoction simmers down to about six quarts; add one gallon of this mixture to fifty gallons of water. Use as a spray for red spider every five to six days until the spider is eradicated.

Tobacco, one pound; boiling water, two gallons; strain when cool. Is very effective when used as a spray against flea beetles, lice aphides (plant lice).

White Hellebore, one ounce; water, three gallons. Effective as a spray for rose slugs.

SPRAYING

We cannot be too emphatic in impressing on the horticulturist to spray his fruit trees and grape-vines if he desires good fruit. Follow directions carefully. Experiments frequently result disastrously. Careless spraying will result in loss of fruit and sometimes the trees. Every fruit-grower should purchase a spraying apparatus; they can now be had for a small sum. Be careful in keeping your solution continually stirred. The best time for spraying is late in the afternoon or during cloudy weather, except with kerosene emulsion; this should be used on bright, sunny days. (We recommend the Gould Pumps. Write us for prices on these; we can save you money.)

SULPHO-TOBACCO SOAP

A Wonderful Insect and Bug Exterminator

Gives best results in quickly exterminating all insect life on plants and flowers, in and out-of-doors. Effectively destroys squash and potato bugs, currant worms, lice, green-fly, mealy bug, red spider, etc. Unexcelled for spraying shrubs, fruit trees and vines. This popular insecticide never fails to give satisfaction. It is cheap, clean, harmless and noninjurious to the tenderest growth. You cannot afford to be without Sulpho-Tobacco Soap if you desire to be successful in plant culture. A trial will give highly gratifying results. We have discontinued handling anything smaller than the 10-lb. size. **10-lb. cake by express, \$3.**

SPRAY PUMPS

We have perfected arrangements by which we can ship promptly from stock in Augusta, the following Goulds Spray Pumps: "Bordeaux" No. 1129, "Pomona" No. 1100, "Monarch" No. 1506; also hose, nozzles, couplings and bands.

The celebrated "Pomona" pump is recognized as the most durable barrel sprayer on the market. It is very powerful and is capable of supplying four leads of hose and eight nozzles.

The "Bordeaux" is placed in bucket, with foot-hold on outside. This is the best small pump made.

The "Monarch" is the best high-grade sprayer for large orchards.

We recommend, with confidence, the pumps made by the Goulds Manufacturing Company. Write us for descriptive catalogue and special prices.

Special Southern Evergreen Lawn Grass "Fruitland Mixture"

If You Want a Beautiful Lawn This Winter, Try Our Mixture

We have experimented for a number of years in an effort to produce a Lawn Grass Mixture that would stand the hot, dry summers of the South, and we have finally succeeded in obtaining an Evergreen Lawn Grass Mixture which has given admirable results. During the past ten years we have tried many different mixtures, and we do not believe that a better Lawn Grass than our **Fruitland Mixture** can be produced. It is composed only of such grasses as have exhibited the greatest heat- and drought resisting qualities, and these are most carefully blended, resulting in a mixture that stands our hot summer sun better than any Evergreen Lawn Grass that we have been able to obtain. We feel sure that a trial will prove satisfactory. Of course, during periods of intense heat and drought in the South all evergreen lawn grass will burn out more or less. Frequent watering with the hose or lawn sprinkler in the evening after sunset is of great benefit, and should be practiced constantly.

In making a lawn, the ground should first be thoroughly broken as deep as possible, and a liberal application of well-rotted stable manure made. This should be thoroughly incorporated with the soil, and the whole then well pulverized. A 7-7-6 fertilizer (7% Phosphoric acid, 7% Nitrogen and 6% Potash) should be applied at the rate of 500 to 1,000 pounds to the acre (depending upon the character of the soil), and raked in well. When the surface has been raked perfectly smooth, the seed should be sown broadcast at the rate of 4 to 5 bushels (of 14 pounds each) to the acre, then raked in lightly, and rolled or tamped firm. In the spring a top-dressing of bone-meal should be applied. By following these directions no trouble should be experienced in obtaining a beautiful lawn. **\$3 per bushel of 14 pounds; in lots of 10 bushels and upwards, \$2.75 per bushel, packed, f. o. b. Augusta, Georgia. No orders filled for less than one bushel.**

A "Fruitland Mixture" Lawn

Fruit Department

APPLES

Summer and early fall varieties of northern or European origin succeed equally as well as southern seedlings, but the latter are the only reliable varieties for *late fall and winter*. Northern winter varieties seldom retain their fruit well here after August, as it then decays and drops during that month. Some native varieties that keep well when grown in the upper sections of Georgia, South Carolina, North Carolina and Alabama, fail to retain their keeping qualities when cultivated in the lower or middle sections of these states. The season of maturity is given for the latitude of Augusta.

For orchard and long-lived trees, plant only *standards*, grown by either being budded or grafted upon *whole seedling stocks*. We do not propagate Apple trees by grafting upon pieces of roots. We have always advocated planting trees propagated on whole seedling stocks, and hold to the same practice now.

Clay or clay loam are the best lands for Apples. Plow well and deep before setting the trees. The land should be well drained and cultivated.

Summer Apples

Varieties for Market Orchards in Capitals

COFFMAN (Summer Red; Coffman June). Medium large, roundish oblong; greenish yellow, striped and splashed with red, with white dots; flesh white, juicy, of good quality. An improvement on Red June. The tree is an upright grower. June.

Carolina Watson. Very large, oblate-conical; green, striped with dull red, with a dull red cheek; sweet, crisp and very fragrant. Exceedingly prolific, and a good market fruit. Beginning of July.

EARLY HARVEST (Early June-eating; Yellow Harvest). Medium to large; bright yellow; tender, juicy, well flavored. An excellent home market Apple; invaluable in any orchard. June 5, and lasts two or three weeks.

EARLY RED MARGARET (Southern Striped June). Small to medium, rather flat; skin yellow, with dark red stripes; subacid and of high flavor. Ripens June 20, and lasts until July 20.

HORSE (Haas, Summer Horse; Yellow, Red or Green Horse, etc.) Large; green; acid. Good for cooking and drying. Known everywhere. A very productive variety. July and August.

Hominy (Sops of Wine). Medium; red; very juicy, subacid. July.

KANSAS QUEEN. Large; yellow, nearly covered with crimson; good quality. Very reliable, productive, and a good market variety. Succeeds well on light sandy soils. June to August.

May Pippin (White June-eating). Small; yellow; good quality. Ripens first of the season.

RED ASTRACHAN (Red Ashmore; Early Rus, etc.) Large; yellow, nearly covered with crimson, and fine bloom; juicy, crisp, acid; beautiful fruit. Tree a thrifty and fine grower; excellent and profitable. Ripens end of May, and continues through June.

RED JUNE (Carolina Red June, etc.). Medium, conical; deep red; juicy. Very productive. June 15 to end of July.

SIMMONS' RED. Large; orange, nearly covered with red; flesh yellow, sugary, good flavor; quality very good. Ripens June to September.

Kansas Queen Apple

Autumn Apples

Varieties for Market Orchards in Capitals

BONUM (Magnum Bonum). Medium; deep crimson; firm, tender, juicy, mild, subacid. September to October.

CAROLINA GREENING (Southern Greening; Yellow, or Green Crank; Southern Golden Pippin; Green Cheese). Medium; green or yellow; crisp, subacid, fine flavor. September to January. Compact grower and prolific.

EQUINETELE (Bachelor; King; Iola; Ne Plus Ultra; Byers; Buckingham; Kentucky Queen). Very large, oblate; yellow, with bright red cheek and crimson stripes; flesh yellow, subacid, very rich and juicy; a magnificent fruit. Ripens end of September and lasts until November. Tree compact and a vigorous grower; bears young.

FALL PIPPIN (Pound Pippin; York Pippin, etc.) Large, green; subacid; quality best. August and September.

Grimes' Golden. Medium, round, oblate; skin yellow, with small dots, flesh yellow, crisp; rich, subacid; very good. October to December.

HARGROVE. (Origin, Haywood County, N. C.). Above medium to large, oblate; golden yellow,* with a bright carmine cheek; flesh crisp, white, with Pearmain flavor; subacid; quality best. Maturity, October and November. The Hargrove possesses such exceptional merits that we believe in offering it a valuable addition is made to our best fall Apples.

MRS. BRYAN. (Origin, Walker County, Ga.) Very large; orange-red; quality best. Maturity, September and October. An exceedingly handsome fruit, and becoming very popular in many sections.

PINE STUMP. Large, oblate; dark crimson; flesh yellow, crisp, sugary, good flavor. August and September. A very showy fruit. Tree spreading, vigorous and productive. One of the best varieties for the Piedmont section of Georgia, South Carolina and North Carolina.

Red Beitigheimer. Large to very large, roundish; ground color pale cream, nearly covered with purplish crimson; flesh white, firm, subacid. A heavy bearer.

WALLACE HOWARD. Very large, conical; deep orange-red, with a few crimson stripes; flesh brittle, sugary and highly flavored; quality best. A very showy fruit. October.

Winter Apples

Varieties for Market Orchards in Capitals

BLACK WARRIOR. Above medium; green; quality best; a fine keeper and a first-class fruit in every respect; prolific. October to March.

BEN DAVIS (New York Pippin; Thornton of Southern Alabama). Medium, oblate; greenish yellow, with a crimson cheek; subacid; fair quality. Keeps remarkably well.

Bismarck. From New Zealand; has been fully tested in Europe and in the United States. Enormously productive, and bears very young; quality very good. Late fall and winter. Tree of dwarf habit, and is largely grown in pots for decorative purposes. Has fruited with us.

GANO (Black Ben Davis, Red Ben Davis, Peyton). Roundish; oblate, large; color deep, dark red; flesh yellowish white; mild, subacid. Quality good and a profitable market variety.

Horn (North Carolina Vandevere). Medium; flat or conical; here and further South dark crimson; further north green, with red cheek; juicy, rich. Ripens in November and keeps until March; tree an open grower; productive.

Mangum (Carter; Gully). Medium; red-striped; flesh firm, juicy and well flavored. Ripens in October, and keeps well; productive; tree a vigorous, compact grower.

Paragon. A Tennessee seedling, combining the good qualities of Winesap and Limbertwig. An excellent keeper.

Romanite. Fruit similar to Shockley, but tree of more open growth; branches slender and very distinct in foliage and in appearance. Possesses all the bearing and keeping qualities of the Shockley.

FRUIT DEPARTMENT

WINTER APPLES, continued

ROME BEAUTY (Royal Red; Rome; Phoenix, etc.). Large; yellow and bright red; medium quality; handsome. A moderate grower and good bearer. October to April. Should be found in all orchards.

ROYAL LIMBERTWIG. Large, oblate; pale yellow, striped red; flesh yellow, rich and juicy.

SHOCKLEY (Waddell; Hall; Sweet Romanite). Medium, conical, always regular; yellow, with a bright crimson cheek; flesh firm, sweet or subacid, with some flavor. Tree very erect, vigorous, exceedingly productive. Ripens in October, and will keep until the following summer. This Apple can not be classed as of first quality, but is yet the most popular winter variety we cultivate. This is a very profitable variety for market.

STAYMAN'S WINESAP (Stayman). A seedling of Winesap. Dark red; flesh firm, fine-grained, crisp, subacid; quality best. Strong grower.

STEPHENSON (Stevenson's Winter, Stevens' Winter, etc.). Medium to large; green, covered with brown; flesh firm, juicy and spicy. A regular bearer, and keeps until April. The tree is a fine grower.

TERRY (Terry's Winter). Medium; subacid; quality best. Resembles Pryor's Red. November to January.

WINESAP. Small to medium; red, vinous; quality very good. A good keeping Apple.

WINTER QUEEN (Poorhouse; Winter Green). Large, roundish oblate; pale yellowish green, russet spots; flesh yellowish, moderately juicy, mild, subacid; very good. Tree vigorous, compact grower. This is a valuable addition to our varieties, as it is an exceptionally good shipper and keeper. Ripens last of October.

YATES (Red Warrior). Small, dark red, dotted with small white dots; flesh yellow, firm, juicy and very aromatic. Immense bearer and good keeper.

YORK IMPERIAL (Johnson's Fine Winter, Shepp, etc.). Medium whitish, shaded crimson; flesh yellow, crisp, juicy and subacid; very good. A profitable market variety for the upper sections. October to January.

(NOTE.—Nearly all winter Apples commence to be in eating condition here in October, and if properly taken care of in a cool, dry room, free from frost, the larger number can be kept through the winter.)

Crab Apples

Siberian Varieties

Golden Beauty, Red and Transcendent. These are the best varieties. They produce an abundance of small fruits, very desirable for preserving. Trees are also most ornamental.

New Native Varieties Introduced by Us

PRICE OF TREES
Standard, 1 year, 3 to 4 ft., strong trees. . . \$0 25 \$2 00

Blythe Crab. A native of Richmond County, Georgia. Fruit sometimes two and a half inches in diameter; good color. A regular and profuse bearer. Keeps late.

King Crab. A native Crab Apple found in Richmond County, Georgia. Lemon-yellow, bright carmine cheek; very showy fruit. Excellent for preserving and very productive; fine keeper.

APRICOTS

Apricots are best adapted for planting in city gardens, or where trees are protected by surrounding buildings. They are among the most delicious of fruits, and, therefore, a little extra care should be given in protecting the flowers from the late spring frosts. The trees, when planted in orchards, seldom last long here, unless protected by surrounding timber or tall-

growing fruit trees, but in many sections of the Southwest this is one of the most desirable of orchard fruits. The period of maturity extends from the beginning of June to the end of July. The best varieties are as follows:

PRICES OF TREES
5 to 7 feet, extra heavy \$C 40 \$3 50
4 to 5 feet, branched 25 2 00 \$17 50

EARLY GOLDEN (Dubois). Fruit small, rounded, oval; skin smooth, pale orange; moderately juicy and sweet; very good flavor.

MOORPARK (Dunmore; Temple's; DeNancy, etc.). Fruit large; skin orange, brownish red on sunny side; flesh bright orange; freestone, juicy, rich and luscious flavor.

ROMAN (Transparent; Grosse Germaine, etc.). Fruit medium-sized; skin pale yellow, sometimes dotted with a few red spots; flesh dull yellow, soft, rather dry; one of the largest-growing and hardiest Apricot trees.

ROYAL. Fruit medium, oval, dull yellow, red on sunny side; flesh pale orange, fine flavor.

ST. AMBROSE. Large, early; skin deep yellow; flesh sugary and juicy.

NECTARINES

Require the same culture as the peach. The fruit, having a smooth skin, is very liable to the attacks of the curculio and brown rot, and must be sprayed according to directions on page 3. They ripen through July and part of August.

PRICES OF TREES
1-year, 5 feet and up, extra heavy \$0 40 \$3 50
1-year, 4 to 5 feet 25 2 00 \$15 00

COOSA. Fruit large, red; flesh white; originated in the northern part of Georgia.

EARLY VIOLET. White, with blush cheek; flesh tender, juicy and of good flavor.

ELRUGE. Red, mottled darker.

NEW WHITE. Large; pure white; flesh tender, juicy, vinous; very good; early; free.

VICTORIA. Medium; purple, with brown cheek. July.

FIGS

PRICES ON TREES
2-year-old, heavy \$0 25 \$2 00 \$15 00
1-year-old 20 1 50 12 00

Best Varieties for General Cultivation in Capitals

Angelique (Early Lemon, etc.). Medium; yellow; of fair quality; very early.

BLACK ISCHIA (Blue Ischia, etc.). Medium; blue-black, crimson pulp; good; moderate bearer. Not so hardy as Green Ischia.

BROWN TURKEY. Medium; brown; sweet and excellent; very prolific. Most reliable for field culture. One of our hardiest varieties.

BRUNSWICK (Madonna; Boughton, etc.). Very large; violet; good and productive.

CELESTIAL (Sugar; Celeste, etc.). Medium; pale violet, with bloom; sweet and excellent; prolific. Hardest of all Figs.

GREEN ISCHIA (White Ischia). Medium to large; green; crimson pulp; excellent; prolific; rather late, but bears continually until frost.

LEMON. Fruit medium to large, flattened, slightly ribbed; yellow; flesh white, sweet; early. Strong grower and very prolific. A favorite for canning.

MAGNOLIA (Dalmation). Large to very large; greenish amber; quality good; productive, but tender.

Madeline (White Neyrei). Medium to large; greenish yellow; flesh white; good for drying.

White Marseilles (White Genoa; White Naples). Medium to large; yellow; flesh white; good.

PEACHES

PRICES OF TREES
1-year, 5 feet and up, extra heavy \$0 25 \$2 00 \$15 00
1-year, 4 to 5 feet, heavy 15 1 25 10 00 \$70 00
1-year, 3 to 4 feet, stocky 10 1 00 8 00 60 00

Varieties for Commercial Orchards in Capitals. Dates of maturity given for latitude of Augusta, Ga., except where noted

We propagate our Peach trees from buds taken from the best bearing trees. We, therefore, know our trees to be true to name, perfectly healthy, free from disease and first-class in every respect. We do not grow cheap or inferior Peach trees.

Directions for Cultivating. A sandy loam is best suited to the Peach, but it will adapt itself to almost any soil, provided it is well drained. Plant one-year-old trees 18 x 18 feet; cut the trees back to 18 to 24 inches, as it is always best to have a low-headed tree. In the spring, after the growth has started, remove all but three branches and let these be distributed so that the tree will be well balanced. For the first two years fertilize with well-decomposed barnyard manure, or a mixture of one part of cotton seed or bone meal to two parts of acid phosphate. Apply 1 1/2 to 2 pounds to each tree. After the third year, avoid nitrogenous fertilizers and use a fertilizer containing a good percentage of bone phosphate and potash and a small percentage of nitrogen. Prune every year by cutting off one-third of the previous year's growth. The head of the tree should be broad and open, so as to allow free circulation of light and air. Never plant newly cleared woodlands; such lands should be cultivated for at least two years before setting the trees, otherwise wood-lice will injure them. In preparing orchard land, plow deep. If necessary,

FRUIT DEPARTMENT

subsoil. Cowpeas, drilled in 2 feet apart, leaving at least 4 feet on each side of the trees, is the best crop to grow in a Peach orchard. Cultivate frequently, and, in late fall or early winter, turn under the cow peas. When the orchard begins to bear it should have clean cultivation, but after the fruit is harvested, drill in peas for a cover crop, and turn these under as above directed.

Peaches, Freestone

- Alexander.** Above medium; highly colored in clay soils, less so in light soils; flesh greenish white, very juicy, vinous and of good quality; adheres to the stone. Matures from May 20 to June 15. Remarkably prolific and bears very young.
- Angel.** (For Florida and sub-tropical sections only.) Large; roundish, slightly pointed; skin yellow, highly washed with red; flesh white, juicy, fine flavor; seedling of Peen-to; freestone; ripens in north Florida, June 20.
- BELLE** (Belle of Georgia). Very large; skin white, with red cheek; flesh white, firm, and of excellent flavor; very prolific; excellent shipper. Tree a rapid grower. July 5 to 20.
- BERENICE** (China Strain). Large to very large; yellow, mottled with dark crimson; flesh yellow, melting, juicy and rich. Matures from end of July to middle of August. In point of excellent qualities it is superior to any yellow Peach of its season, is most showy and an excellent shipper. Its good quality also commends it to the planter. It originated with the late Dr. L. E. Berckmans in 1877, and, after a trial of over thirty years, we have nothing equal to it at the same season.
- Captain Ede.** Large; yellow; excellent quality. Ripens early in July. Resembles Elberta, but better flavor.
- CARMAN.** Large; creamy white, with deep blush; skin tough, but flesh very tender and of fine flavor; prolific bearer. A most profitable and popular shipping variety. Ripens June 20 to July 1.
- Champion.** Large; skin creamy white, with red cheek; flesh rich and juicy. Ripens middle to last of July.
- Chair's Choice.** Large; yellow; flesh very fine; heavy bearer; an excellent variety. August 15 to 30.
- Climax.** (For Florida and sub-tropical sections only.) A seedling of Honey, but larger; a heavy bearer; fruit of good appearance, round, slightly oblong; point recurved; pale yellow, washed red; flesh yellowish white, fine-grained, sweet. Ripens north Florida, June 25 to July 5.
- Columbia** (Pace; Yellow Indian; Tinley, etc.). Large; dingy yellow and red stripes; flesh yellow, buttery, rich and sweet; quality best. End of July to middle of August.
- Dr. Berckmans.** Large; creamy white, blush cheek; flesh white, melting, vinous, of the highest flavor. A seedling of Chinese Cling, but surpasses any variety of the same parentage maturing at same season. Middle to end of July.

- ELBERTA.** Large; yellow, with red cheek; juicy and of good flavor; flesh yellow. Supposed to be a seedling of Chinese Cling. Ripe middle of July. This is an excellent shipping variety.
- Everbearing.** (Indian type.) In some sections, this Peach begins to ripen about July 1 to 15, and continues to produce successive crops until about the middle of September. Fruit varies in size from large to medium, is creamy white, mottled and striped with light purple and pink veins. Oblong, tapering to the apex; flesh white, with red veins near the skin. Very juicy and of excellent flavor. We do not recommend the Everbearing Peach for commercial orchards, but for family use only.
- FORD'S.** An excellent large, white-flesh Peach of Chinese type. Quality good; a heavy and reliable bearer. June 15.
- Governor Hogg.** Large; white, with beautiful cheek; flesh white, tender and juicy; highly flavored; red at pit; semi-cling; June 20 to 25.
- GREENSBORO.** Origin, North Carolina. Ripens usually a week later than Alexander, but frequently with it, and is much larger and superior in every way. Round, sometimes elongated; flesh white, very juicy, of good quality; skin white, with red cheek, highly colored in the sun. A favorite and profitable early market sort.
- HILEY** (Early Belle). Large; white, with beautiful red cheek; flesh white; quality best. Prolific bearer. Ripens June 25 to July 5. The best shipping variety of its season, which makes it very valuable.
- Imperial.** A Florida variety; very large, roundish, oblong; skin greenish yellow, red blush; flesh white, juicy and of excellent flavor. Ripens in north Florida. June 25 to July 5.
- Pallas.** A seedling of Honey, originated by Dr. L. E. Berckmans. Fruit resembles the parent, but is much larger and more nearly round in shape; flesh white, melting and vinous. July 10.
- Peen-to Free.** (For Florida and sub-tropical sections only.) Fruit 2 to 2½ inches in diameter, very flat; skin pale greenish white, with beautifully mottled red cheek; flesh finely grained; quality good. As this Peach colors some time before maturity, it is frequently gathered prematurely. Therefore, it should be allowed to hang upon the tree until approaching full maturity, to get the best fruit. Ripens in Florida from April 1 to May 10.
- Picquet's Late.** Very large; yellow, with a red cheek; flesh yellow, buttery, rich, sweet and of the highest flavor. Maturity from end of August to middle of September. One of the best freestones
- Red River.** An improvement on Early Louise, but of larger size; quality best; creamy white, with pink cheek. June 10 to 15.
- ROBERT.** Large; creamy white, with crimson cheek; flesh white, slightly veined pink, melting, juicy and vinous; quality best. A reliable sort. August 15.
- SALWAY.** A well-known and popular variety; large; dull yellow, mottled brownish red; flesh yellow, firm, but rather acid; fine flavor. August 15.
- Slappy.** Clear, golden yellow, with dark cheek; flesh yellow and of good quality. Ripens early in July.
- SNEED** (Bowers; Peebles). Medium; creamy white, with carmine mottling; flesh greenish white, juicy; semi-cling; quality fair. Ripens on an average six to eight days before Alexander.
- Summerour, or Atlanta.** Very large, round; deep yellow; flesh yellow, juicy, sweet and of good quality. Maturity from middle to end of September. This Peach fills a gap which has long been open in the season of maturity, because it ripens after all the good freestones are gone; very desirable on this account.
- THURBER.** Medium to large; skin white, with light crimson mottling; flesh very juicy, vinous, of exceedingly fine texture. Maturity, July 1 to 10. A seedling of Chinese Cling. This variety has seldom failed to yield a crop of fruit when other varieties failed, and is highly prized as a market sort.
- Victor.** Size below medium; creamy white, mottled light carmine, some faint dark stripes; flesh white, juicy, vinous; semi-cling. Quality best, of the Alexander type. Ripens immediately after Sneed.
- WADDELL.** Of medium size, fine shape; skin greenish white, almost covered with red; flesh white and juicy; very prolific; a fine market sort. June 25.
- Walio.** (For Florida and sub-tropical sections only.) Medium, roundish, oblong; bright yellowish red, washed with carmine; flesh fine-grained, juicy and melting. Very valuable for the South. Ripens June 1.
- Wonderful.** Very large, deep yellow, with carmine blush; flesh yellow, firm, good. Ripens middle to last of August.

A One-Year Peach Tree Properly Pruned

If you want a beautiful Lawn this winter, try our "Fruitland Mixture" We feel sure a trial will prove satisfactory. See page 5

FRUIT DEPARTMENT

Peaches, Clingstone

- Albright.** Large; white, changing to light orange; juicy, sweet, very good. Ripens middle of October.
- Chinese Cling.** Very large; creamy white, mottled carmine; flesh fine-grained, melting, vinous. July 20 to August 1.
- Demming's September.** Large, oblong, with a protuberance; yellow, with red cheek; flesh yellow, red near the stone, juicy, vinous and good. Resembles Pineapple, but one month later.
- GENERAL LEE.** Improved Chinese Cling. Above medium, oblong; creamy white, with carmine wash; flesh very fine-grained, melting, very juicy, and of high flavor; quality best. July 1 to 10.
- Heath Late White** (White English; Eliza Thomas; Potter's September; Rauty; White Globe; Henrietta, etc.). Large, oval, with sharp apex; skin creamy white, very seldom with any red; flesh pure white to the stone, juicy and sweet, with good aroma; very popular for preserving. Ripens beginning of September.
- Indian Blood.** Large; dark claret, with deep red veins; downy; flesh deep red, very juicy. Middle of August.
- Junio.** Very large; deep yellow, mottled with orange-crimson; flesh yellow, fine-grained, very juicy, vinous, subacid; quality best. August 10 to 20.
- Levy's Late** (Henrietta Cling). Fine cling; large size; skin deep yellow, shaded brownish red in the sun; flesh firm and juicy. Favorite variety in California.
- Oriole.** Large; yellow, rich, buttery. Middle of August. A yellow-fleshed Chinese Cling.
- Pendleton.** Very large; yellow; very good quality. Beginning of September.
- Pineapple.** (Lemon; Kennedy's; Carolina Allison Early; Lemon Cling, etc.). Large, oblong, with a protuberance like a lemon; skin golden yellow, tinged with dark red; flesh yellow, slightly red at the stone, juicy, subacid, of excellent quality. Middle of August.
- Plant.** Very large; covered with red; flesh yellow, juicy, rich and sweet. An improved Orange Cling. Ripens from July 25 to August 10.

- Stonewall Jackson.** Almost identical with General Lee in size and quality, but ripens a week later; tree a more compact grower. July 10 to 20.
- STINSON'S OCTOBER.** Large; white, with red cheek; of very good flavor. The most profitable late Peach yet introduced for southern markets. Middle of October.

Peaches, New

- PRICES OF TREES**
- | | EACH | 10 | 100 |
|------------------------------------|--------|--------|-----|
| 1-year, 5 feet and up, extra heavy | \$0 50 | \$4 00 | |
| 1-year, 4 to 5 feet, heavy | 35 | 3 00 | |
| 1-year, 3 to 4 feet, stocky | 25 | 2 00 | |
- BRACKETT.** (Named by us in honor of Col. G. B. Brackett, United States Department of Agriculture, Washington, D. C.) After testing innumerable varieties we have at last succeeded in securing in the Brackett a Peach which fills a long-felt want. Before disseminating this valuable variety we have given it a thorough trial for five years, and it has come up to our most sanguine expectations. Its period of ripening commences just at the close of the Elberta season. The fruit—a perfect freestone—is large to very large, oblong, with sharp apex and shallow suture; color orange-yellow, washed red and mottled deep carmine, with a very dark carmine cheek; flesh deep yellow, juicy, highly flavored; quality best. This Peach is evidently a cross between Smock and Chinese Cling. We will have a large stock of this Peach ready for distribution in November, 1911. Make your reservations now. Will be disseminated solely by us.
- CARSON.** (Originated in Hancock County, Georgia.) Above medium; very pale yellowish ground, totally overspread with light carmine, with deep carmine cheek; flesh white, very juicy, vinous, red near the stone. A sure and heavy bearer, and a desirable variety. Ripens last of July. Cling.
- KENT.** An excellent new variety, which originated at Augusta, Georgia. Fruit of large size, slightly depressed at apex; skin greenish yellow, tinted carmine at apex and on cheek; flesh yellow, buttery, of fine flavor; skin very tough, but peels readily. Ripens August 1 to 15. Cling.

PEARS

This list of select varieties is reduced to such as have been well tested and proved valuable throughout the largest section of the South. We grow standard Pear trees principally, but can supply dwarfs of a few varieties, as below mentioned:

PRICES OF TREES

	EACH	10	100
Standard, 2-year, 5 feet and up, well-branched	\$0 35	\$3 00	\$25 00
Standard, 1-year, 4 feet and up, whips or partly branched, or 2-year medium	25	2 00	17 50

Distance for planting: Standard trees 20 to 25 feet, and Dwarf trees 15 to 20 feet apart each way

Oriental Pears

This type is peculiarly adapted to the South

- Garber.** Resembles the Kieffer in size, appearance and quality, but matures here in August, and between the Le Conte and Kieffer. A thrifty grower and valuable variety.
- Hawaii, of Sandwich Island.** Medium; round, Bergamotte-shaped. Very prolific; foliage luxuriant, fine grower. Valuable for cooking and canning. October to December.
- Japan Golden Russet.** Large, almost globular; entirely covered with russet; firm, juicy; excellent for canning and preserving. A strong, vigorous grower.
- KIEFFER.** Fruit large to very large; skin yellow, with a light vermilion cheek; flesh brittle, very juicy, with a marked musky aroma; quality good. Matures from September to October. Tree vigorous and very prolific. Begins to bear when four years old. If the fruit is allowed to hang upon the tree until the beginning of October, and then carefully ripened in a cool, dark room, it is a very attractive Pear.
- Le Conte** (Chinese Pear). Fruit large, pyriform; skin smooth, pale yellow; quality very variable, usually of second quality, but if allowed to mature slowly in a cool, dark room, its quality improves remarkably. Maturity from July 20 to end of August. Trees begin to bear when five years old.
- Mikado.** Large; yellow; flesh brittle. A vigorous grower. Good for cooking and preserving. End of August.
- Smith's.** Almost identical with Le Conte in size, shape and quality, but a few days earlier.

European Pears

SUMMER

- Alamo.** Origin, Texas. Large; yellow, with bronze cheek. Tree a vigorous grower; bears young.
- Bartlett.** Large; buttery, melting, of rich flavor. Very popular, Ripens end of July, and during August.
- Belle Lucrative** (Seigneur d'Esperen; Fondante d'Automne). Large; melting, delicious; fine grower; bears abundantly and regularly. End of July and August.
- Beurre Perpetuel.** Medium; yellow; melting, juicy; very good. Blooms twice; first bloom ripens in August, second bloom in September.
- Beurre Giffard.** Medium size; juicy. Tree a straggling grower. Ripens middle of June.

- Clapp's Favorite.** Resembles Bartlett, but ripens a few days earlier. Fine flavor. Tree a vigorous grower.
- Doyenne d'Ete.** Small; melting; very good. Tree a moderate grower. Beginning of June.
- Early Harvest.** Good size and color; quality fair; very productive. Ripens in July.
- Flemish Beauty.** Large; melting; sweet; handsome. August.
- Koonce.** Medium to large; very handsome; juicy, sweet, very good. Tree a vigorous grower. Middle of June.
- Petite Marguerite.** Small; very early; an improvement upon Doyenne d'Ete. Beginning of June.
- Philadelphia.** Large; melting; very good. July 15.
- St. Michael Archangel.** Large; melting, very good; beautiful; pyramidal tree. Ripens in August.
- Seckel.** Of exquisite flavor, perhaps the standard of quality in Pears. Tree a stout, slow grower. August.
- Wilder.** Small to medium; yellow, with dark red cheek; melting, sweet, and very good. Beginning of June. Of vigorous and symmetrical growth. A valuable early market fruit.

AUTUMN AND WINTER

- Beurre d'Anjou.** Large; juicy, melting. A fine tree, and regular bearer. September.
- Beurre Diel.** Large; buttery, rich; vigorous grower. Sept.
- Beurre Langelier.** Medium; juicy, vinous, good. October and November.
- Beurre Superfin.** Large; melting, subacid. Fine tree, and regular bearer. August.
- Duchesse d'Angouleme.** Large; melting, juicy and well-flavored. Vigorous grower and reliable bearer. August 15.
- La France.** Resembles Duchesse d'Angouleme, but a month to six weeks later.
- Lawrence.** Very large; melting, rich. Tree a remarkably fine grower. September and October.
- Sheldon.** Large, round; russety; first quality. Last of August.

Dwarf Pears

PRICES OF TREES

	EACH	10	100
2- and 3-year, 4 feet, branched	\$0 35	\$3 00	\$25 00
1-year, 3 to 4 feet, whips and partly branched	25	2 00	17 50

Bartlett, Beurre Superfin, Beurre d'Anjou, Duchesse, Seckel. For descriptions see list of Standard Pears.

FRUIT DEPARTMENT

JAPAN PERSIMMONS (*Diospyros Kakj*)

The Japanese Persimmon is thoroughly adapted to the Cotton Belt, and it does especially well in the Coast Region. It is a vigorous grower and an early and most prolific bearer; in fact, bears too profusely, and, therefore, the fruit should be properly thinned. This fruit is coming to the front for market purposes and, where known, commands good prices, as it usually comes on the market in the fall and early winter. For shipment, the fruit should be packed in flat boxes with divisions, and each specimen wrapped in paper. Some varieties have dark flesh, which are edible while the fruit is still hard; whereas, the light-flesh varieties must be thoroughly matured before they can be eaten, as they are very astringent until fully ripened.

The quality of the Persimmon becomes greatly improved after being house-ripened. The fruit of nearly every variety begins to color when half-grown, but should be allowed to hang upon the tree in this section until just before frost is expected, or, in the case of the early-ripening varieties, when fully matured. Many of the late-ripening varieties can be kept until January or February. Some varieties will be seedless during certain years, and then again in other years they will contain more or less seed. Furthermore, both round and pointed specimens are sometimes produced on the same tree.

PRICES OF TREES

Budded and grafted, heavy, 5 to 7 feet, $\frac{3}{8}$ to $\frac{1}{2}$ inch caliper.....	EACH	10	100
Budded and grafted, 3 to 4 feet.....	\$0 50	\$4 00	\$35 00
	25	2 00	17 50

Among (Yemon). Round, flattened, deeply ribbed; dark orange-red; 2½ to 3 inches in diameter; average weight, six ounces; flesh red, very sweet, and sometimes edible while still solid.

Goshio. Very large, round, somewhat flattened. 3 to 3½ inches in diameter. Average specimen ten ounces, and sometimes yields specimens sixteen ounces in weight. Keeps late; flesh red; tree erect grower.

Hachiya (Beehive in Japan synonyms: Costata, Imperial, Yomato, etc.). Oblong, with a blunt apex, slightly ribbed, 2½ by 3 inches; average weight, five ounces; flesh deep orange-red; astringent while solid, but sweet, and very good when soft. Should be house-ripened, and can be kept until March. Tree of vigorous and tall growth.

HIYAKUME (100 "Momee," a unit of Japanese weight, equaling four-fifths of a pound). This is perhaps the most desirable of all the round, red-fleshed varieties, and, as the fruit affects various shapes, it is known under many names, such as Pound, etc. Fruit large, averaging 3 inches in diameter and five ounces in weight; usually flattened, but elongated forms are quite common upon the same branch;

flesh bright orange-red. Keeps very late; must be soft before being edible. Tree of moderate height.

Miyo-tan (Mazeli). Round, or slightly oblong, 2½ inches in diameter; skin deep orange-red; flesh usually deep reddish brown, but specimens of half-brown and half-red flesh are often produced on the same tree; keeps late. The brown-fleshed specimens are edible while solid.

Okame (Mikado). Large, roundish oblate, sometimes with quarter marks, point not depressed; skin orange-yellow, changing to brilliant carmine; flesh brownish red; good quality. Edible while solid.

Tsuru-no-ko (Stork Egg; Mino Kaki). Large, oblong, 2½ by 3½ inches, weight four to five ounces, sometimes ten ounces; skin bright red, some specimens covered with black at apex; flesh red, very good; keeps late. Edible only when soft. Foliage long and shiny, tree compact, of vigorous growth.

Zengi of Zingi (Name of Japanese Village). Small, 1½ to 2 inches in diameter, weight three to four ounces. Flesh dark brown, with dark spots. Very sweet. Edible as early as middle of September, while still solid; very prolific.

Chickasaw Plums

(Improved Type)

Varieties of this type are less liable to attacks of curculio than those of European origin, and combine vigor of growth with great productiveness.

Wild Goose. Large; somewhat oblong; bright vermilion-red; juicy, sweet, good quality; cling. Ripens middle of June. A very showy and fine market fruit; prolific bearer. Profitable for early shipments.

European Plums

The following varieties of Plums thrive best in the Piedmont sections:

Clyman. Seedling from California. Large; reddish purple; flesh firm; freestone; vigorous and a good bearer.

Giant Prune. The largest Prune known; fruit averaging 1½ to 2 ounces each, retaining the good qualities of the smaller varieties. Desirable for the upper sections.

Imperial Gage. Large; oval; golden green; juicy, rich, first quality.

Lombard. Medium; violet-red; juicy, good; hardy and productive. The leading market variety. Ripens early in July.

Sugar Prune (from Luther Burbank). Superior to the French Prune; dark purple when matured, covered with thick white bloom; flesh yellow, tender and rich.

Japanese Plums

Prunus triflora of botanists *Prunus Japonica* of Pomologists

Abundance, or Yellow-fleshed Botan. Round, with pointed apex, but varies from quite round to sharply-pointed. Skin yellow, ground heavily washed purple-carmine and a darker cheek; flesh yellow, very juicy, subacid, with apricot flavor; quite firm; skin tough; clingstone; quality best; pit large. Maturity June 15 to July 5. We also have this variety under several names as received from Japan, all proving identical. One of the best early varieties, and valuable for northern and middle states. Carries well to distant markets. After fruiting this variety extensively for many years, we consider it the most desirable for shipping North and West. Fruit should be thinned, otherwise the size is reduced and the quality is inferior.

America. Hybrid of Japan and Chickasaw. Originated by Burbank in 1898. Fruit very glossy, large; coral-red; flesh light yellow; quality good; very hardy. A very valuable sort. Excellent for jellies. Ripens middle to last of June.

Apple. From Luther Burbank, 1898. Fruit large, 2½ inches in diameter; reddish purple when ripe; flesh firm, deep red, sweet or subacid, rich, high-flavored; nearly freestone. Ripens middle to last of June.

Burbank. In general characteristics, resembles Abundance, or Yellow-fleshed Botan. Color cherry-red, mottled yellow; shape usually more globular; flesh, flavor and quality are identical, but its period of maturity here is from two to three weeks later, or middle to last of July. The tree is of very vigorous habit, slightly differing in foliage. Valuable also for northern states.

Wickson Plums

FRUIT DEPARTMENT

PLUMS, continued

Chabot. Two to 2½ inches long, by 2 inches broad; yellow ground nearly covered with carmine-red; flesh orange-yellow, very solid, subacid; quality very good; clingstone. Maturity end of July. Identical with Bailey of several growers.

Chalco. Tree an unusually strong grower. Productive and hardy; fruit almost standard; large, flat, tomato-shaped; reddish purple; flesh yellow, firm and meaty, very sweet. Ripens before Burbank.

Combination. One of Burbank's best. An extremely handsome, large, early, light crimson plum of the very best quality. Flavor unsurpassed. Nearly globular, uniform; flesh light yellow; nearly freestone. Ripens June 5 to 15.

Doris. Medium; purple; sweet; quality good. Remains on tree for a long time. Ripens last of July.

Douglass (Munson, of Professor Bailey; Hytan-Kayo, of Texas growers). Large, pointed; dark purplish carmine, with blue bloom; juicy, sweet; very good; clingstone. July 20 to August 1. Exceedingly attractive as to color.

First. Originated by Luther Burbank. As its name indicates, it is the first Plum to ripen. Size medium; pale amber, with faint blush on sunny side; flesh moderately firm, sweet and juicy. Ripens three weeks earlier than Red Nagate.

Georgeson. Round; clear gold or yellow; flesh firm, yellow, sweet and of gage flavor. June 15 to July 1.

Gonzales. Very large; meaty; brilliant red color; moderate grower. A favorite Texas variety.

Hanson. American type. Tree of open growth. Fruit medium, globular; yellow, overspread with red; skin thick; flesh yellow, juicy; quality good. Very productive. Ripens July 15.

Kelsey. Size large to very large, often 7 to 9 inches in circumference; heart-shaped; color greenish yellow, overspread with reddish purple and blue bloom; flesh very solid, yellow, rich and juicy, and with excellent flavor; pit very small. Semi-cling. Maturity middle of July to end of August.

Kerr (Hattankio No. 2). Variable in shape, usually pointed, 1½ by 1½ inches, but perfectly round specimens are often produced upon the same tree. The pointed form is the Hattankio-Togari (Togari means pointed); the round form is sometimes called Hattankio-Maru (Maru means round). Skin bright yellow; flesh yellow, juicy, subacid, gage flavor; quality very good. Clingstone. Maturity from June 10 to 20. Very prolific; an excellent early market, as well as dessert fruit.

Lutts. Fruit medium, oval, sometimes pointed; dark red, with yellow dots, purple when fully ripe; flesh yellow, buttery, melting; productive. Clingstone. Ripens June 1.

Red Nagate, or Red June, or Long Fruit. 1¼ by 1½ inches, pointed; skin thick, purplish red, with blue bloom; flesh yellow, solid, somewhat coarse-grained, juicy, subacid, with Damson flavor; clingstone; quality good. Maturity, 10th to end of June. Very prolific, showy and attractive in color. It ripens a week before Abundance, and is the earliest large-fruited market variety.

PLUMS, continued

Ogon (Shiro-Smomo, or the White Plum). Medium to large, round, golden yellow; flesh yellow, firm, subacid; quality good; freestone. June 1 to 15. Tree of vigorous growth. A good cooking fruit.

Sagetsuma. Fruit large, conical, with pointed apex; yellow, overspread with red, enormous yellow dots; flesh yellow; quality good. Clingstone. Ripens June 10.

Satsuma, or Blood Plum (Yonemomo). Large; skin dark purplish red, mottled with bluish bloom; shape globular, or with sharp points; flesh firm, juicy, dark red or blood-color, well-flavored and firm; quality very good; pit small. Unsurpassed in quality for canning. Maturity middle of July. Tree very vigorous. One of the most valuable varieties for this section, and adapted to the Middle and Northern states.

Terrell. This is a Florida seedling—a cross between a Japanese and Chickasaw. Strong grower; fruit 1½ to 2 inches in diameter, nearly round, slightly ribbed, terminating in a blunt point; reddish yellow, slightly mottled, covered with purplish bloom; flesh greenish yellow, sweet, juicy, quality good; clingstone. Highly recommended for Florida and Gulf coast.

Wickson. Fruit large to very large; obconical; waxy white when half-grown, then the color gradually changes to pink and to dark crimson-purple; flesh very firm, yellow, juicy, subacid and highly flavored; pit small; clingstone; best quality. July 10 to 25.

QUINCES

These succeed best in strong, clay soils, in special localities and in the Piedmont section. They can be grown in bush form. Being somewhat subject to leaf-blight, the trees should be sprayed with Bordeaux mixture before the buds swell, repeating the spraying throughout the summer at intervals, as necessary. However, in some situations Quinces seem to be free of blight.

Strong, 2-year trees, 3 to 4 feet, 40 cts. each, \$3 for 10, \$25 per 100, except where noted

Angers. A productive old variety. Fruit rather acid. 25 cts. each, \$2 for 10, \$15 per 100.

Apple, or Orange. Large, round. Excellent late variety. Bears abundantly.

Chinese. A most extraordinary fruit. Oblong, and of immense size, often weighing from 2 to 2½ pounds. Growth rapid and distinct. Blooms very early in spring, but withal seldom fails to produce a crop. Fruit rather coarse in texture, but makes an excellent jelly.

	EACH	10	100
3 yrs., 4 to 5 ft., heavy	\$0 40	\$3 00	\$25 00
2 yrs., 3 to 4 ft.	25	2 00	15 00

Meeche's Prolific. Larger than Apple Quince. Ripens early.

Rea's (Rea's Mammoth). A very large and fine variety of the Apple Quince. A thrifty grower, and productive. By some considered the best of all Quinces.

NUT-BEARING TREES

ALMONDS

Princess and Sultana. Both are prolific and soft-shelled varieties, and are the varieties mostly cultivated in Europe for commercial purposes. Almonds are unreliable in most of the middle sections of the South, as they bloom early, and the fruit is apt to be killed by late frosts. One-year-old budded trees, 4 to 5 ft., 30 cts. each, \$2.50 for 10.

CHESTNUTS

American Chestnuts. Our native variety.

	EACH	10	
Heavy trees, 4 to 5 ft., well-branched, 3 yrs.	\$0 50	\$4 00	
3 to 4 ft., well-branched	25	2 00	

Large Spanish Chestnuts. Produce very large nuts, not so sweet as the American, but their size and beautiful appearance commands a ready sale. Does well in this locality; an early and heavy bearer

	EACH	10	100
6 to 7 ft., extra heavy, well branched, 1½ to 2 in. cal.	\$1 25	\$10 00	
5 to 6 ft., extra heavy, well branched, 1½ to 1½ in. cal.	1 00	8 00	75 00
4 to 5 ft., very heavy, well branched, 1 to 1½ in. cal.	75	6 00	50 00
3 to 4 ft., well branched	50	4 00	27 50
2 to 3 ft., branched, stocky	25	2 00	15 00

FILBERTS

European White. Of easy culture, growing 8 to 10 feet; bushy habit. Will grow in almost any soil, and requires but little space. Nut oblong, very sweet. Suited to the Piedmont section.

	EACH	10	100
7 yrs., 8 to 10 ft., extra heavy bushes	\$2 00	\$15 00	
6 yrs., 6 to 8 ft., very heavy bushes	1 00	7 50	\$60 00
5 yrs., 4 to 5 ft., heavy, branched	50	4 00	30 00
4 yrs., 3 to 4 ft., heavy, branched	35	3 00	20 00
3 yrs., 2 to 3 ft., stocky	25	2 00	15 00

WALNUTS

The best soil for Walnuts is a strong clay, rich and somewhat stony; hence many acres of land which are difficult to cultivate for ordinary crops are available for Walnuts. Never plant these trees in pipe-clay or undrained soil.

ENGLISH WALNUTS

(Thin-shelled, or Madeira Nuts)

Nuts large, oblong; shell very thin; of excellent quality and keep sweet a long time.

	EACH	10	100
4 to 5 ft., heavy	\$0 75	\$6 00	
3 to 4 ft., heavy	50	4 00	\$35 00
2 to 3 ft., heavy	35	3 00	25 00
18 to 24 in.	25	2 00	15 00

JAPANESE WALNUTS

The Japan Walnut succeeds from Massachusetts southward. It seems to be particularly successful in the southern states. The tree is very handsome, has a large, spreading top. It makes a useful as well as a very ornamental tree. At three years of age the tree commences to bear. The nuts are borne in clusters of from ten to twenty. The shells are moderately thick, but the kernels are very sweet. We offer two varieties:

	EACH	10	100
5 to 6 ft., extra heavy	\$0 75	\$6 00	
4 to 5 ft., extra heavy	50	4 00	\$30 00
3 to 4 ft., heavy	30	2 50	20 00
2 to 3 ft., stocky	25	2 00	15 00

Juglans cordiformis. Nut broad, pointed, flattened, medium-sized, somewhat resembling the shell-bark hickory. If cracked longitudinally, the kernel can be removed entire.

Juglans Sieboldiana. Shaped like the butternut. Shell thicker than that of the English Walnut.

NOTE.—We can supply Walnuts in immense quantities. Special prices given per 1,000

FRUIT DEPARTMENT

A thrifty Pecan Grove

PECANS

All of our Pecans are budded or grafted on two-year, thrifty seedlings, and are, therefore, very heavy and stocky. We offer a beautiful stock of the following well-known varieties:

PRICES OF TREES

	EACH	10	100
5 to 7 feet, extra fine.....	\$2 00		
4 to 5 feet, very heavy.....	1 50	\$12 50	\$100 00
3 to 4 feet, very heavy.....	1 25	10 00	90 00
2 to 3 feet, heavy.....	1 00	8 00	75 00
1 to 2 feet, stocky.....	75	6 00	50 00

Jerome. Originated in Louisiana and is a seedling of "Pride of the Coast," and very superior to the parent; the tree is very healthy and a vigorous grower. Nut very large, shell about the same thickness as Pride of the Coast, good cracking quality. Nut is of excellent quality and well filled. Will run from 30 to 50 to the pound.

For a number of years we have inadvertently sent out this Pecan under the name of Pride of the Coast. This Pecan is unquestionably a very superior variety, and, when it is better known, will become one of the standard sorts.

Frotscher's Egg Shell. Very large; nuts averaging 45 to 50 to the pound. Shell very thin; can be cracked with the teeth; meat sweet and of fine quality, and can be removed entire from the shell. One of the best Pecans grown.

Schley. Large size; shell thin; full kernel; flavor rich; good grower and fairly prolific.

Stuart. Nut of large size, about 2 inches long, by 1/4 inch in diameter; shell thin; quality good; heavy bearer.

Van Deman. Nut large, about 45 to 50 to the pound. Oblong; shell quite thin; good quality.

The planting of grafted and budded Pecans has now passed the experimental stage, and it has been practically demonstrated that an orchard of the better varieties of grafted and budded Pecans is a paying investment.

The market demands the larger grades of nuts, which are beginning to be well known for their high quality, and the only way to make Pecan-growing pay is to plant budded or grafted trees of such varieties as combine large size, good flavor, thin shell and easy-cracking qualities. When purchasing trees, the reliability of the nurseryman should be known, because many inferior trees are palmed off by unreliable dealers. It is known that some varieties which are best adapted to the lower sections of the South do not always give the same result when planted in higher localities. Whilst there are scores of varieties now cultivated, a half-dozen of the best well-known sorts would be amply sufficient for commercial groves.

Pecans should be planted from 35 to 50 feet apart, according to the soil. The Pecan will adapt itself to a variety of soils,—the rich, alluvial soil of the river bottoms, the high rolling lands, and the sandy pine lands; but the trees should never be set in lands which are not well drained. If the land sours, the trees are apt to be killed. Although the Pecan succeeds in so many different soils, the richer the land the earlier and larger the yield. This tree is hardy as far north as Iowa. Its natural distribution includes fifteen degrees of latitude. The trees can be safely transplanted as soon as they are thoroughly matured in the fall, and can be successfully transplanted as late as March.

The land between the rows can be planted for several years in cotton, peas, potatoes or vegetables. If these are heavily fertilized, it will increase the growth of the trees. A top-dressing of stable manure or commercial fertilizer within a radius of 4 to 6 feet from the tree will be found a good investment.

The commercial value of nuts varies according to size. Nuts averaging forty to sixty to the pound sell at wholesale for from 30 to 60 cents per pound, and some unusually large sizes bring fancy prices.

Pecan trees are long-lived. The average fruiting age for budded trees, which have grown off vigorously and received proper care, is three to five years. Such trees should yield from fifteen to fifty pounds each per year, after being planted ten years. This tree, is, therefore a source of much revenue, and it is not subject to many diseases or insect depredations. For remedies, see page 3.

Directions for Handling and Transplanting Pecans

Take great care in preventing the roots of the trees from becoming dry, by being exposed to the weather. Keep the roots moist and covered at all times. When taking the trees to the field for setting, they must be carefully covered with moss, wet sacks or something else, to protect them from drying out. This is important. Only one tree should be removed at a time and this set at once in the hole previously dug. This hole must be at least 2 feet wide and of proper depth. Cut off the ends of all bruised or broken roots. It has been practically demonstrated that it is advisable to cut off a part of the taproot, as this causes the roots to throw out laterals. This will allow the tree to receive more food, and, at the same time, affords it a firmer hold upon the land. Use a sharp knife for this; do not use an axe or hatchet. Place the tree in the hole about 2 inches deeper than it originally stood in the nursery row; fill the hole about half full with well-pulverized top soil in which there is a proper proportion of well-rotted stable manure. If this is not available, use the proper amount of high-grade fertilizer. This must also be thoroughly mixed with the above-mentioned soil.

Pack the earth well about the roots of the tree—the firmer the better. Fill up the hole and pack the dirt well, but leave at least 2 inches of loose soil on top. If the soil is very dry, some water should be poured about the tree when the hole is partly filled. When the trees are more than 3 or 4 feet in height, the top should be cut back to within 3 feet of the ground. Do this after the tree is planted. Be careful not to break the eyes off the tree in handling. Keep them well cultivated and properly pruned

FRUIT DEPARTMENT

SMALL FRUITS

BLACKBERRIES

CULTURAL DIRECTIONS.—Blackberries thrive on almost any soil, but the most desirable is a strong loam, retentive of moisture, tending toward clay rather than sand, but soil must be well drained at all times. Fertilizers containing a good proportion of potash are the most desirable; too much humus or nitrogen will induce a rank growth of wood at the expense of the fruit. As a preventive for rust, spray with copper sulphate solution during the fall and winter, and with Bordeaux (4-6-50) during the spring and summer. The rows should be 6 to 8 feet apart and the plants from 3 to 4 feet in the row, according to the character of the soil. If desired to cultivate both ways, set the plants in checks 6 to 7 feet each way. As soon as the fruiting season is past, remove the old canes; these should be burned at once. The young canes should be clipped off when they reach the height of about 2 feet; this will cause them to branch and they will become self-supporting. Apply fertilizer during the late winter and give shallow and constant cultivation.

- Eldorado.** Very hardy and vigorous. Berries large, borne in large clusters, and ripen well together. Very sweet; no core. A heavy bearer, and valuable sort. 10 cts. each, 75 cts. for 10, \$2 for 50, \$3 per 100, \$22.50 per 1,000.
- Erie.** Very productive. Fruit large, round, good quality. One of the most popular sorts. Early. 10 cts. each, 50 cts. for 10, \$1.50 for 50, \$2 per 100, \$15 per 1,000.
- Iceberg.** This remarkable Blackberry is one of Luther Burbank's productions. It succeeds admirably in this climate. The fruit is transparent white. The seeds, which are usually small, can be seen in the ripe berries. The fruit is borne in large clusters. The berries are of large size and good quality. The plant is an enormous bearer, and the fruit lasts through a long period. A desirable variety. Strong plants, 15 cts. each, \$1 for 10, \$3.50 for 50, \$6 per 100.
- Mersereau.** A most valuable variety. Fruit of immense size. An early and enormous bearer, and very hardy. A popular market sort. 10 cts. each, 75 cts. for 10, \$2 for 50, \$3 per 100, \$22.50 per 1,000.

CURRANTS

These are only moderately successful in this latitude. They do best in a cool, strong moist loam. Plants should be well cultivated and fertilized. Keep them mulched. Set the plants 4 feet apart. Prune out all old wood, leaving only vigorous shoots.

- Strong, 2-year plants, each \$0 15
 - 10 strong, 2-year plants 1 00
 - 50 strong, 2-year plants 3 50
 - 100 strong, 2-year plants 6 00
- Black Champion.** Very productive; large bunch and berry. Excellent quality; strong grower.
- Victoria.** Large, bright red bunches; long berries, medium to excellent quality; erect grower; productive; ripens late.

DEWBERRIES

CULTURAL DIRECTIONS.—Use short, stout stakes, driven at the end of each row of canes, with a cross-piece 18 inches long nailed to each stake 2½ to 3 feet from the ground. On the top, near each end of these cross-pieces, drive a stout nail slanting toward the stake, upon which to catch a wire. Two lines of No. 14 galvanized wire, one on each side of the row, are fastened to one of the end stakes and run on the ground between the rows to the other end stake. These wires are now drawn as

DEWBERRIES, continued

taut as possible and securely fastened to the other end of the row. The wire on each side is now raised, pressing the canes inward, and caught on the nails, thus holding all the canes closely together in the row.

Austin's Improved. Fruit very large, subacid, vinous, but of second quality. Enormous bearer. The most productive market variety we have ever grown, and is eight to ten days ahead of any other. Strong and vigorous grower, and stands our hottest summers perfectly. Free from rust. Twenty-five two-year plants produced forty quarts of immense berries. Strong plants, 10 cts. each, 50 cts. for 10, \$1.50 for 50, \$2 per 100, \$15 per 1,000.

RASPBERRIES

CULTURAL DIRECTIONS.—The same as for Blackberries and Dewberries. These thrive best in a deep, moist, well-drained soil; the lighter loams are best for the red, and the heavy loams for the black-caps. To make a success of Raspberries, the land should be able to withstand drought well. Cottonseed meal, pure ground bone, or fertilizers containing a good proportion of potash are best, and should be liberally applied during the winter and early spring. To get the best results, and keep the plants in vigorous condition, they must be mulched heavily with straw.

- Strong plants, each \$0 10
 - 10 strong plants for 50
 - 50 strong plants for 1 50
 - 100 strong plants for 2 00
 - 1,000 strong plants for 15 00
- Columbia.** Fruit resembles Shaffers; very large, purplish; vigorous and productive.

Cuthbert Raspberries

Cuthbert. After several years' trial this proves the best and most reliable of the red-fruited varieties. Fruit large; red; of excellent quality; yield very prolific; ripens middle of May, and continues for several weeks.

Golden Queen. Fruit golden yellow; similar in quality to Cuthbert, to which it is evidently a close relation. Its fine color attracts the eye. Prolific; stands our summers.

Gregg. Black-cap. Very productive; large size; firm; black.

GRAPES, Native Varieties

Nothing but varieties that have stood severe tests are included in the following lists, but we can also supply a few vines each of several additional varieties. We have a large stock of extra-strong one- and two-year-old vines.

PRICES OF ASSORTMENT, OUR SELECTION OF VARIETIES

- 10 strong vines in 10 best varieties for table use \$1 00
- 100 strong vines in 10 best varieties for table use 8 00

Special quotations will be given for lots of 1,000 and upward

FOR PURCHASER'S SELECTION. Not less than five vines of one variety will be charged at the rate for 10; not less than 40 vines of one variety will be charged at rate for 100

- Agawam (Rogers' No. 15).** Large; dark red. 10 cts. each, 80 cts. for 10, \$5 per 100.
- Amber.** Pale amber; long bunches; berry medium, sweet, fine flavor; larger than the Concord. 15 cts. each, \$1.25 for 10, \$6 per 100.
- Berckmans.** Cross of Clinton and Delaware. Bunch larger than Delaware, but not so compact; berry one-third larger than Delaware, of same color and quality. Matures middle to end of July. 15 cts. each, \$1.25 for 10, \$6 per 100.
- Brighton.** Bunch medium, berry large, reddish; skin thin; quality best. An excellent early table or market grape. Vigorous. 15 cts. each, \$1.25 for 10, \$6 per 100.
- Catawba.** Bunch and berry large; deep red; with lilac bloom; juicy, vinous and of musky flavor. 10 cts. each, 80 cts. for 10, \$6 per 100.

- Concord.** Bunch and berry very large; blue-black, with bloom; skin thin; cracks easily; flesh sweet, pulpy, tender; quality good. Very prolific and a vigorous grower. One of the most reliable and profitable varieties for general cultivation. 10 cts. each, 80 cts. for 10, \$5 per 100.
- Delaware.** Bunch compact; berry medium; light red; quality best; moderate grower, but vine very healthy; very prolific and more free from disease than any other variety. The most popular grape grown; unsurpassed for table and for white wine. 15 cts. each, \$1.25 for 10, \$6 per 100.
- Diana.** Bunch large, compact; berry large, reddish lilac, sweet; very productive. Ripens about August 15 to 25. 15 cts. each, \$1.25 for 10, \$6 per 100.
- Elvira.** Pale green; skin thin; sweet and juicy; one of the most reliable grapes for the mountain regions. 10 cts. each, 80 cts. for 10, \$5 per 100

FRUIT DEPARTMENT

GRAPES, *continued*

- Ives.** Bunch very large; berry large; blue; skin thick; flesh pulpy, sweet, very musky; vigorous grower and prolific bearer. Very hardy and popular as a wine grape. 10 cts. each, 80 cts. for 10, \$5 per 100.
- Lindley.** Bunch medium, loose; berry medium to large; color red; flesh tender, sweet, rich, aromatic flavor. Midseason. 15 cts. each, \$1.25 for 10, \$6 per 100.
- Moore's Diamond.** Large; greenish white; juicy; little pulp and of very good quality. Yields abundantly; fruit perfect and showy. Ripens very early in July; the best very early white variety. 15 cts. each, \$1 for 10, \$6 per 100.
- Moore's Early.** Bunch medium; berry large, round; black, with heavy blue bloom; medium quality. Very early, desirable market sort. 15 cts. each, \$1.25 for 10, \$6 per 100.
- Niagara.** Bunch and berry large; greenish yellow; flesh pulpy, sweet, foxy. Its remarkable size and fine appearance give it much popularity as a market variety; vigorous and prolific. 10 cts. each, 80 cts. for 10, \$5 per 100.
- Worden.** Resembles Concord, but is a few days earlier and generally regarded as a better grape. 15 cts. each, \$1.25 for 10, \$6 per 100.

Bullace, or Muscadine Type
(*Vitis rotundifolia, or Vulpina*)

This type is purely southern, and is of no value for the northern or western states. Vine is free from all disease. The fruit never decays. The product is very large, and the cultivation reduced to the simplest form. Plant from 20 to 30 feet in a row, trained on an arbor or trellis.

- | | | | | |
|--|--------|--------|---------|---------|
| | EACH | 10 | 100 | 1,000 |
| Strong, 2-year, trans-planted vines | \$0 15 | \$1 25 | \$10 00 | \$70 00 |
- Flowers.** Bunches have from fifteen to twenty-five berries, black, and of sweet, vinous flavor. Matures from end of September to end of October, or four to six weeks later than Scuppernong.
- Scuppernong.** Berries large, seldom more than eight to ten in a cluster; color brown; skin thick; flesh pulpy, very vinous, sweet, and of a peculiar musky aroma. A certain crop may be expected annually. Vine is free from all disease and insect depredations. Fruit has never been known to decay before maturity. Wonderfully prolific. Popular wine grape; wine, when properly prepared, resembles Muscatel.

MISCELLANEOUS FRUITS

ELAEAGNUS (Japan Oleaster)

- Elaeagnus edulis** (Longipes). Gumi fruit of the Japanese. A low-growing ornamental shrub, which produces in early May enormous quantities of fruit, which is one-third of an inch in length, oblong, bright red, and covered with minute white dots. This plant is not sufficiently appreciated, and should be more extensively cultivated, as the fruit is very ornamental and makes an excellent jelly or marmalade; the flavor is sharp, pungent, and rather agreeable. Foliage light green, silvery beneath. Produces very fragrant flowers April 1. Plants perfectly hardy, and grow in almost any situation.

ERIOBOTRYA, *continued*

- perfect north of Charleston, but otherwise the tree is perfectly hardy, and is extremely ornamental. This plant is well adapted to the southern coast belt.
- Medlar, Japan.** Seedling. Fruit the size of a Wild Goose Plum, round or oblong, bright yellow, subacid and refreshing. Two-year seedlings, pot-grown, 25 cts. each, \$2 for 10, \$17.50 per 100.
- M., Giant.** Grafted plants, all pot-grown. Same as Japan Medlar, but fruit four times as large. One-year, 50 cts. each, \$4 for 10.
- M., Palermo.** A new variety from Florida. Of medium size, oblong shape, pale yellow color, with some fine russet netting scattered over surface. Of good quality.
- | | | |
|---|--------|--------|
| | EACH | 10 |
| 2 yrs., heavy, pot-grown, grafted | \$0 75 | \$6 00 |
| 1-yr., pot-grown, grafted | 50 | 4 00 |

MULBERRIES

- Prices, except where noted:
- | | | | |
|--------------------|--------|--------|---------|
| | EACH | 10 | 100 |
| 7 to 9 ft. | \$0 25 | \$2 00 | \$15 00 |
| 5 to 6 ft. | 20 | 1 50 | 12 00 |
- Downing.** Fruit of rich, subacid flavor; lasts six weeks. Stands winters of western and middle states.
- Hicks' Everbearing.** Wonderfully prolific; fruit sweet, insipid; excellent for poultry and hogs. Fruit produced during four months.
- Russian.** Very hardy; largely planted for hedges and wind-breaks in the western states; fruit small and of little value.
- Stubbs.** A native variety from Laurens County, Georgia. Produces an immense quantity of fruit of enormous size, 1 1/2 to 1 3/4 inches in length, of excellent quality. Bears for about two months. Extremely scarce and difficult to propagate. Strong, one-year, budded trees, 50 cts. each.

OLIVE (Picholine)

- A variety much esteemed for its rapid growth and early bearing. The tree is also less subject to damage by insects than most other varieties, and ripens its fruit in twelve months, thus bearing a crop annually. Makes excellent oil, and stands with the best for pickling. Olives have been cultivated on the coast of Georgia and South Carolina for many years, and an excellent quality of oil has been produced. A peculiarity of the Olive is that it flourishes and bears abundant crops on rocky and barren soils, where no other fruit trees are successful.
- | | | | |
|----------------------------------|--------|--------|---------|
| Pot-grown plants: | EACH | 10 | 100 |
| 24 to 30 in., branched | \$0 50 | \$4 00 | \$30 00 |

| 15 to 18 in. | 25 | 2 00 | 17 50 |

POMEGRANATES

- The Pomegranate is hardy in the Gulf States, and the central sections of Georgia and the Carolinas. The plants will sometimes attain a height of 20 or more feet. The plant is of good form and foliage, the bright scarlet flowers make this a most ornamental plant. It bears early and profusely. There is a growing demand for the fruit in the eastern markets, and the Pomegranate is being grown in some sections on a large scale.
- | | | | |

- Purple-seeded, or Spanish Ruby.** Large; yellow, with crimson cheek; flesh purplish crimson, sweet, best quality.
- Subacid.** Very large; highly colored. Pulp juicy, subacid.

Elaeagnus edulis

ORNAMENTAL DEPARTMENT

An effective border planting of Deciduous and Broad-leaved Shrubs

Landscape Design

We offer our services to owners of private estates, suburban and city home grounds, suburban communities, residential parks officials in charge of the development of the grounds of educational and other institutions, summer and winter resorts, hotel grounds, country club and golf grounds, public squares and playgrounds, parkways, mill villages, cemeteries, and to all those desiring to have their properties laid out and improved in good taste.

We have had long and varied experience in this profession, and are almost daily called into consultation with the owner and house-architect in selecting the layout of approach drive, service road, walks, lawn areas, flower garden, kitchen garden, and service yard. We visit and make a study of the property to be improved, give verbal suggestions and written reports.

If the problems requiring solution are such as can only be satisfactorily disposed of by means of plans, we are prepared to make topographical surveys, design preliminary and general plans, and, for the better execution of the work, detailed grading, drainage, and planting plans, specifications and estimates.

We solicit correspondence with any one interested in landscape work.

P. J. BERCKMANS Co., Inc., Landscape Architects

Ornamental Department

DECIDUOUS SHRUBS

The comparatively recent development of the desire for suburban homes has, within the past few years, created a growing demand for such things as will contribute to the exterior beauty of the home; especially so as the greater space enjoyed lends itself most readily to this end. However, there is scarcely a home in country, suburbs or town, the beauty and value of which cannot be enhanced by a judicious treatment of the grounds, be they large or small; and for this purpose no class of plants lend themselves more readily than the hardy flowering shrubs. Their importance has only recently begun to be appreciated, but the demand has increased so rapidly within the past few years that we have found it necessary to increase our plantings each season, and this year we have again materially increased our acreage and the list of varieties carried, and we are prepared to furnish the most desirable shrubs in large quantities. We grow the best sorts that have been tested as to their adaptability to the South; we also grow very largely of the hardy varieties adapted to the northern sections.

The same directions for the preparation of the soil and planting as given for deciduous fruit trees on page 6 applies to the average deciduous shrub. We cannot, however, too strongly impress the necessity of keeping the ground free from weeds and grass, and loose by frequent stirring, after being planted.

A few hints upon planting and pruning deciduous shrubs may aid many persons in handling these with judgment and care, and increase the vigor of their growth. Nearly all deciduous shrubs which are grown in open ground should have their tops and branches cut back one-third or one-half, as seems necessary. Cut back the most vigorous-growing sorts more than those that are of more dwarf habit. All shrubs that flower on the wood of the preceding year's growth should not be pruned until June or July, or after the crop of flowers is over. To this class belong the following:

Altheas, *Pyrus Japonica*, Deutzia, Philadelphus, Spirea, etc. The old wood may be shortened-in, in order to promote the young growth, which is to produce flowers the following year. But some varieties, like *Hydrangea paniculata grandiflora*, which produce flowers upon the young wood, should be pruned during winter.

We will supply 10 shrubs in 10 varieties, standard size, our selection for	\$1 50
Or 100 shrubs in 25 or 50 varieties, standard size, our selection, for	10 00
Or 10 shrubs in 10 varieties, extra heavy, for	2 00
Or 100 shrubs in 25 or 50 varieties, extra heavy, for	15 00

ORNAMENTAL DEPARTMENT

Althaea frutex (Hibiscus Syriacus)

Rose of Sharon

These are most beautiful flowering shrubs, and deserve to be more extensively planted. The flowers are produced in the greatest profusion from May until August. When planted in groups or masses of contrasting colors, the effect is most pleasing. The varieties we offer are nearly all of dwarf growth and are far superior to the old sorts.

Prices, except where noted:	EACH	10	100
Extra-strong, bushy, grafted plants, 5 to 6 ft.	\$0 75	\$6 00	\$40 00
Very strong, grafted plants, 3 to 5 ft. (according to variety)	40	3 00	20 00
Strong, grafted plants, 2 to 3 ft.	25	2 00	15 00

Althaea amplissima. Double, deep purple-pink, with crimson center; tall grower.

A. bicolor hybrida. Semi-double, white, with crimson and maroon center; medium grower.

A. carnea semi-plena. Semi-double, pale pink, with crimson eye; medium grower.

A. caelestis. Single, deep violet-blue, with darker center; a magnificent variety; blooms early; very dwarf.

A. Comte de Hainaut. Semi-double, pale pink, shaded to crimson center; medium grower. Fine.

A. Jeanne d'Arc. Double, pure white; tall grower.

A. Meehanii. New Variegated-leaved Althaea. Robust habit, compact and somewhat dwarf. A most remarkable variety; leaves variegated, creamy white with irregular margins and green centers; never sunscalds. The flowers are single, 3 1/2 to 4 inches in diameter, of a satiny lavender sheen, and purple blotched at the base of each of the five petals; blooms perpetually from June until autumn.

This variety must not be confused with *Althaea Buistii* or *Variegata*, whose double wine-colored flowers never open and remain unsightly. The *Meehanii* is immensely superior.

	EACH	10	100
Very strong, grafted plants, 2 to 3 ft.	\$0 50	\$4 00	\$30 00
18 to 24 in., bushy	40	3 00	20 00
12 to 18 in., branched	25	2 00	15 00

A. Pompon Rouge. Double, deep purple-pink; more compact and superior to *Amplissima*.

A. puniceus roseus. Large, semi-double, violet-purple, with crimson eye; medium grower.

A. purpurea semi-plena. Originated by us. A beautiful semi-double violet-purple variety. Flowers large, of beautiful form; tall grower; profuse bloomer.

A. rubra plena. Double, rosy red, with crimson center; medium grower; very fine.

A. totus albus. Single, pure white; very dwarf.

A. violacea semi-plena. Semi-double, deep purple-magenta, with crimson center; tall grower.

A. Violet Claire. Semi-double, pale violet-blue, with crimson center; medium grower.

Amorpha. False, or Bastard Indigo

Amorpha fruticosa. A fine ornamental shrub of spreading habit, with fine foliage; violet-purple flowers produced in clustered racemes 3 to 6 inches in length; very desirable. Strong plants, 25 cts. each, \$2 for 10.

Althaea Meehanii

Azalea

Azalea calendulacea (A. lutea). Great Flame Azalea. Very showy. About the middle of April this plant is covered with a mass of bloom. There are many shades of yellow, orange, buff and crimson. The plant remains in bloom for several weeks. It is unquestionably one of the most brilliant spring-flowering shrubs. Attains a height of 6 to 8 ft.

	EACH	10
2 to 3 ft., strong clumps	\$1 75	\$15 00
18 to 24 in., well-branched plants	75	6 00
12 to 18 in., strong plants	50	4 00

A. mollis. Japanese Azalea. Hardy species from China and Japan, expanding its large flowers before *A. calendulacea*. The colors range from pale yellow to orange and carmine. They are exceedingly valuable for massing in open ground, where early flowers are desired, and for forcing under glass. Grafted plants, in distinct colors, with buds, 15 to 18 in., \$1 each, \$8 for 10.

A. nudiflora. Pinkster Flower. The well-known native variety, which in early spring, before the leaves appear, produces in great profusion pink flowers of various shades. Being one of our earliest spring flowers, makes this shrub very popular and desirable.

	EACH	10
24 to 30 in., strong clumps	\$1 00	\$8 00
18 to 24 in., strong clumps	75	6 00
12 to 18 in., strong clumps	50	4 00

A. Pontica. Hardy Ghent Azalea. A very beautiful species, growing 3 to 4 feet high. Flowers yellow, orange and red, with delightful odor. Should be planted in rich, shady situation. Named varieties, fine bushy plants, well set with buds, 12 to 15 in., 75 cts. each, \$6.50 for 10.

Berberis (Barberry)

	EACH	10	100
24 to 30 in., heavy	\$0 35	\$2 50	\$20 00
18 to 24 in., well branched	25	2 00	15 00

Berberis purpurea (Purple-leaved Barberry). A form of the European Barberry, but with bright purple foliage. A most conspicuous plant; very effective when properly planted with other shrubs. Attains a height of 5 to 6 feet.

B. Thunbergii (Thunberg's Barberry). A dwarf and graceful shrub from Japan. Leaves small, bright green, changing in autumn to beautiful shades of orange, scarlet and crimson; berries red, produced in great profusion and lasting throughout the winter. Makes a beautiful hedge.

Buddelia variabilis Veitchiana

Veitch's Buddleia

A beautiful new shrub, with very dark green leaves, usually attaining a height of 6 to 8 feet. Flowers violet-purple, with orange throat, borne in arching racemes 6 to 10 inches long. Blooms almost the entire summer; very fragrant. A most desirable acquisition. Strong, well-branched plants, 25 cts. each, \$2 for 10.

Callicarpa. French Mulberry

	EACH	10
5 to 6 ft., very heavy, well branched	\$1 00	
4 to 5 ft., heavy, well branched	50	\$4 00
3 to 4 ft., well branched	35	3 00
2 to 3 ft., branched	25	2 00

Callicarpa Americana (French Mulberry). With purple berries, produced in clusters; very effective in fall and early winter. This beautiful native plant is not sufficiently appreciated.

C. Americana alba. A form of the French Mulberry, with white berries. A very distinct and rare plant, introduced by us. In the late fall and early winter, when this plant is covered with a mass of snow-white berries, it is a very conspicuous object.

Calycanthus. Sweet Shrub

Calycanthus Floridus (Sweet or Strawberry Shrub). Our native sweet or brown shrub. Flowers double; chocolate colored; very fragrant.

	EACH	10	100
2 to 3 ft.	\$0 25	\$2 00	\$15 00

C. Praecox (Chimonanthus fragrans). Oriental sweet shrub. A beautiful Japanese shrub, producing a great abundance of exquisitely fragrant yellow flowers early in January, and lasting about four weeks.

	EACH	10	100
4 to 5 ft., very heavy, bushy	\$1 00	\$8 00	
30 to 40 in., very bushy	50	4 00	\$25 00
24 to 30 in., well branched	25	2 00	15 00

Caryopteris Mastacanthus

Blue Spirea, or Chinese Beardwort

A free-blooming shrub, with lavender-blue flowers produced in summer and early autumn in great profusion. Very effective for massing. Strong, field-grown plants, 24 to 30 in., 25 cts. each, \$2 for 10.

ORNAMENTAL DEPARTMENT

Ceanothus. New Jersey Tea

A very desirable flowering shrub well adapted for rockeries and massing. Succeeds in any well-drained soil. Commences to bloom April 15 and lasts for a long time. Height 4 to 6 feet.

	EACH	10
Extra-strong 4-year plants.....	\$0 50	\$4 00
Strong 3-year plants.....	35	3 00

Ceanothus intermedius. Panicles smaller than those of Marie Simon. Flowers lavender. Blooms late.

C. Marie Simon. Blooms in April. A beautiful variety with flesh-colored flowers.

Chilopsis. Flowering Willow

	EACH	10
4 yrs., very bushy.....	\$0 75	\$6 00
3 yrs., very heavy.....	50	4 00
2 yrs., heavy.....	25	2 00

Chilopsis Linearis. A tall-growing shrub, from southwest Texas. Leaves linear; flowers lilac; very showy in terminal racemes. Each flower is composed of a corolla-like tube, divided at the end into five lobes, nicely crimped. Blooms almost continually from spring until frost.

C. Linearis alba. Similar to above, but with white flowers and of more dwarf and compact growth. A fine plant.

Chionanthus Virginica. White Fringe

A very ornamental native shrub. White, fringe-like fragrant flowers in early April.

	EACH	10
Large, bushy plants, 2 to 3 ft.....	\$0 50	\$4 00
18 to 24 in., bushy.....	25	2 00

Citrus trifoliata. Hardy Orange

As an ornamental flowering plant; few are more desirable. The plant attains a height of 10 to 15 feet and is very bushy and thorny; foliage trifoliolate, retained quite late, but is not an evergreen here; however, the vivid green wood gives it an evergreen appearance during winter. In early March the plant is covered with a mass of large, single white flowers, and a second and third crop of blooms, of smaller size, are produced during summer. The bright golden fruit is retained during winter, which makes this plant a showy garden feature. It is also an excellent hedge plant.

	EACH	10	100
Strong, well-branched plants.....	\$0 25	\$2 00	\$15 00

For smaller sizes see under Hedge Plants, page 36.

Clethra alnifolia

Sweet Pepper Bush, or White Alder

A hardy, compact shrub, attaining a height of 3 to 5 feet. Leaves dark green; flowers creamy white, fragrant, in erect racemes. One of our finest flowering shrubs. Blooms in May.

	EACH	10
2 to 3 ft., heavy, well branched.....	\$0 50	\$4 00
18 to 24 in., well branched.....	35	2 50

Colutea arborescens. Bladder Senna

A tall shrub, sometimes attaining a height of 15 feet. Leaves dull green; flowers yellow, tinged with reddish brown, produced in early summer. Flowers are soon followed by large inflated seed pods. These are frequently highly colored. Very attractive and ornamental plant.

	EACH	10	100
4 to 5 ft., very heavy.....	\$0 50	\$4 00	\$30 00
3 to 4 ft., heavy.....	25	2 00	17 50

Corchorus (Kerria) Japonicus fl. pl.

Globe Flower; Japanese Rose

This is an old favorite. It is of spreading habit, with double yellow blooms about an inch in diameter, which appear early in April; effective for massing. Attains a height of about 5 feet. Heavy clumps, 50 cts. each, \$4 for 10; 2 to 3 ft., branched, 25 cts. each, \$2 for 10, \$15 per 100.

Cornus. Osier Dogwood

	EACH	10	100
2 to 3 ft.....	\$0 25	\$2 00	\$17 50

Cornus Sanguinea (European Red Osier). A shrub of spreading habit; branches purplish red; flowers greenish white, in dense panicles; berries black. Attains a height of 8 to 10 feet. Blooms in April.

C. Siberica (Red Siberian Osier). An upright shrub. Branches bright red; leaves dark green; flowers creamy white, in numerous small panicles; fruit light blue. Usually attains a height of 6 to 10 feet. A very conspicuous shrub in early spring.

Cydonia Japonica (Pyrus Japonica)

Japan Quince, or Fire Bush

	EACH	10	100
3½ to 4 ft., heavy, well branched.....	\$0 35	\$3 00	\$20 00
2 to 3 ft., well branched.....	25	2 00	12 00

Ceanothus

Deutzia

	EACH	10	100
3 yr. extra-heavy specimens.....	\$0 75	\$6 00	
3-yr. plants, very bushy.....	50	3 50	\$25 00
2-yr. plants, bushy.....	25	2 00	15 00

Deutzia Crenata (Single White Deutzia). Flowers pure white, single, produced in great profusion in April. A tall grower.

D. crenata flore pleno alba (Candidissima). Flowers pure white, double; produced in great abundance middle of April. A tall-growing variety.

D. crenata flore pleno rosea (Double Pink Deutzia). Same as *D. crenata flore pleno alba*, except that some of the outer petals are rosy purple. Very desirable.

D. gracilis. Flowers pure white, bell-shaped, quite dwarf; is also valuable as a pot-plant for winter blooming in conservatory. Blooms early in April.

D. gracilis rosea. Resembles *D. gracilis*, but flowers are light rose in profuse clusters. A desirable plant.

D. Lemoinei. Flowers pure white, borne in great profusion on stout, upright branches; dwarf habit; blooms early in April. A desirable acquisition.

D., Pride of Rochester. Double white, back of petals pink; large panicles; blooms middle of April. Tall grower; one of the best.

Elaeagnus edulis (longipes)

Japan Oleaster

A beautiful ornamental shrub. In early April produces very fragrant greenish yellow flowers, which are immediately followed by enormous quantities of bright red edible fruit. A very useful, as well as ornamental plant. For full description see page 14.

	EACH	10	100
Strong field-grown plants, 3 to 4 ft., bearing size.....	\$0 75	\$6 00	\$50 00
Strong, field-grown plants, 2 to 3 ft., very bushy.....	50	4 00	30 00
Strong, field-grown plants, well branched, 18 to 24 in.....	25	2 00	18 00

Euonymus Bungeanus

Bungen's Spindle Tree

A tall Chinese shrub, 8 to 12 feet high, branches slender; leaves dark shiny green; red fruit, very showy; flowers yellowish.

	EACH	10
3 to 4 ft., heavy.....	\$0 50	\$4 00

Exochorda grandiflora

Exochorda grandiflora. Pearl Bush
(*Spiraea grandiflora*)

A popular, large-growing shrub, attaining a height of 8 to 10 feet. A native of North China. Leaves bright green; large, pure white flowers are produced in great profusion about the middle of March. When the blooms are fully expanded, a well-grown plant has the appearance of a snow bank. A clump or mass of these plants on the lawn makes a most conspicuous feature.

	EACH	10	100
4 to 4½ ft., extra heavy	\$0 75	\$6 00	\$40 00
3 to 4 ft., very heavy	50	4 00	25 00
2 to 3 ft., heavy	35	3 00	20 00
18 to 24 in., well branched	25	2 00	15 00

Forsythia. Golden Bell

	EACH	10	100
2 to 3 ft., well branched	\$0 25	\$2 00	\$15 00

Forsythia Suspensa (Drooping Golden Bell). A graceful variety with long, slender, drooping branches. Leaves dark, shiny green; flowers yellow, produced in great profusion in early spring. Attains a height of 6 to 10 feet.

F. Viridissima (Golden Bell). Flowers golden yellow, produced in great profusion last of February or early in March. Most effective when planted in large groups.

Genista (Spartium). Spanish Broom

	EACH	10	100
4 to 5 ft., extra heavy	\$0 75	\$6 00	
3 to 4 ft., very bushy	50	3 50	\$30 00
2 to 3 ft., well branched	25	2 00	15 00

Genista alba. A white Spanish broom, having same habit of growth as *Genista Juncea*. Small white flowers in great profusion in early April.

Hydrangea Monstrosa

Genista Juncea (*Spartium Junceum*). (Spanish Broom.) A most conspicuous, erect-growing shrub. The branches are almost leafless, and have a rush-like appearance. Small green leaves are sparsely produced. When this plant is laden with its profusion of golden yellow pea-shaped flowers, it forms a most conspicuous object. It commences to bloom in April, and continues for many weeks. Attains a height of 6 to 8 feet.

Hydrangeas

A rich moist soil, where they are protected from the afternoon sun of summer, is the best location.

Prices, except where noted:	EACH	10	100
3 yrs., heavy, well branched, 30 to 36 in.	\$0 50	\$4 00	\$30 00
2 yrs., strong, well-branched plants, 18 to 24 in.		25	2 00 18 00

Hydrangea arborescens (Wild Hydrangea). A native species of upright growth. Flowers creamy white, borne in large clusters in early summer.

H. arborescens grandiflora alba. A recent introduction of great value. Blooms are of very large size, snowy white. A valuable acquisition, as it begins to bloom in April, and lasts almost the entire summer. In form, the panicles are similar to *H. Hortensis*.

	EACH	10
Strong 3-yr. plants	\$0 50	\$4 00
Strong 2-yr. plants		35 3 00

H. Monstrosa. A very large-flowering variety; beautiful rose-color shaded white. In some soils pale rose or blue. A very decided improvement on *Otaksa*.

H. Otaksa. An improved variety of *Hortensis*; flower-heads very large; pale rose of blue, according to soil.

Hydrangea paniculata grandiflora

H. paniculata grandiflora. Produces in July immense panicles of pure white flowers, which last for several weeks; a most valuable shrub. A large bed of this plant makes a most striking appearance. This shrub should be grown in rich ground and cut back severely during winter. It will then produce magnificent flower-heads.

H. Ramis pictis, or **Red-branched**. With dark purple stems and large heads of rose or pale blue flowers, with lighter center.

H. Rosea. Vigorous habit. Flower-heads shaped like those of *Thomas Hogg*; freely produced. Color bright, rosy pink.

H. Thomas Hogg. Best white-flowering variety of the *Hortensis* group. Flowers last several weeks. At first slightly tinted green, becoming of the purest white.

HYDRANGEA, SPECIMEN PLANTS

We have a beautiful lot of these, which have been carefully prepared and tubbed. These plants make a handsome display.

	EACH
Specimens in 10-in. tubs	\$1 50
Specimens in 12-in. tubs	3 00

We offer the following varieties: **Monstrosa**, **Otaksa**, **Ramis Pictis**, **Rosea** and **Thomas Hogg**.

HYDRANGEA, STANDARD

Hydrangea paniculata grandiflora (Standard). These plants have been trained to a single stem and have large, bushy heads. Conspicuous as single specimens on the lawn.

	EACH	10
4 to 5 ft.	\$1 00	\$8 00
3 to 4 ft.		75 6 00

ORNAMENTAL DEPARTMENT

Hypericum Moserianum
Golden St. John'swort

A beautiful shrub, attaining a height of 1 to 2 feet. Leaves dark green; plant almost an evergreen; flowers bright golden yellow, 2 inches in diameter. Very showy. EACH 10
12 to 15 in., well branched.....\$0 25 \$2 00

25 2 00 15 00

Jasminum Humile (*Revolutum, Flavum, Triumphans*). (Italian Yellow Jasmine.) A many-branched shrub, native of Asia. Leaves dark green. Evergreen in the South. Flowers bright yellow. A summer and fall bloomer. Hardy as far north as Maryland.

J. Nudiflorum (Naked-flowered Jasmine). A graceful hardy drooping shrub, with dark green leaves. Bright yellow flowers are produced in early January. Hardy at New York.

Lagerstroemia Indica. Crape Myrtle

A very popular and free-flowering shrub, or small tree, which produces blooms in great abundance throughout the summer. The flowers are beautifully fringed and are borne in large clumps. A massing of these, or a single specimen, makes a most striking effect. We offer three varieties: **White, Crimson and Pink.** EACH 10 100

Lonicera Belgica (Belgian, Dutch or Monthly Fragrant Honeysuckle). Of semi-climbing habit, but can easily be grown in bush form. Pink flowers; very profuse bloomer in early spring. In late summer again produces flowers, which continue until frost. One of our finest shrubs.

L. Bella. A hybrid variety, producing an abundance of pinkish white flowers in early spring, followed by yellow fruit.

L. fragrantissima (Fragrant Honeysuckle). Highly esteemed for its exceedingly sweet-scented, pinkish white flowers, which appear in February and continue to bloom for a long time. Almost evergreen.

L. Morrowii (Japanese Bush Honeysuckle). A Japanese variety, producing early in April a profusion of white flowers, followed by a mass of bright red fruit.

L. ruprechtiana (Manchurian Honeysuckle). Flowers pure white. Blooms in March, and lasts six weeks; berries red or yellow. A very showy variety.

Myrica Cerifera. Wax Myrtle

A native shrub found from New Jersey to Texas. Broad green leaves; berries bluish white with a waxy coating. A desirable shrub. EACH 10
12 to 15 in., bushy.....\$0 25 \$2 00

Philadelphus. Mock Orange

Vigorous-growing shrubs, with large, handsome foliage and beautiful flowers, produced in great profusion in early spring. Should be in every collection. EACH 10

4 to 6 ft., heavy, well branched.....\$0 50 \$4 00
2 to 3 ft., well branched.....25 2 00

Philadelphus coronarius (Garland Syringa). Flowers pure white, very fragrant; produced in great profusion.

P. grandiflorus. A conspicuous variety, with very large white flowers.

P. laxus. Flowers very large, white, produced in clusters. A very fine and desirable late-blooming variety.

Prunus

Dwarf Double-flowering Almond and Plum

Beautiful small shrubs, producing, before the leaves appear, quantities of double flowers, last of March to the middle of April. Very desirable. EACH 10

Strong, grafted plants.....\$0 25 \$2 00

Prunus Sinensis alba plena. (*Amygdalis pumila*). Dwarf Double White-flowering Almond.

P. Sinensis rubra plena (*Amygdalis pumila*). Dwarf Double Pink-flowering Almond.

P. triloba (Flowering Plum). A small shrub with downy ovate leaves, sometimes three-lobed. Beautiful double pink flowers are produced in early spring in great profusion.

Punica granatum. Pomegranate

Very valuable summer-flowering, tall-growing shrubs. Perfectly hardy South. Flowers are produced in great profusion very early in May, and last almost during the entire summer. Foliage bright lustrous green. Very conspicuous and desirable.

EACH 10 100
5 to 6 ft., extra heavy, well branched....\$0 75 \$6 00
3 to 4 ft., very heavy, well branched.....50 4 00 \$30 00
2 to 3 ft., branched.....25 2 00 15 00

Punica granatum alba. Double white.

P. granatum rubra. Double red. Very showy.

P. granatum variegatum. Double variegated.

Rhamnus alaternus. Buckthorn

A shrub or small tree. Attains a height of 20 feet. Branches glabrous; leaves ovate-lanceolate, serrated, dark green above, pale green beneath. 25 cts. each, \$2 for 10.

Rhodotypos Kerrioides. White Kerria

A beautiful and distinct shrub from Japan, attaining a height of 4 to 6 feet. Leaves large; flowers white, an inch or more in diameter, appearing in late spring, followed by black berries, which are retained during the winter.

EACH 10 100
2 to 3 ft., very bushy.....\$0 35 \$3 00
18 to 24 in.....25 2 00 \$17 50

Rhus cotinus (Sumac)

Purple Fringe, or Smoke Tree

Greatly admired for its cloud-like masses of very delicate flowers which appear the last of April and cover the entire plant during the summer. From a distance the plant appears like a cloud of smoke.

EACH 10 100
6 to 8 ft., very bushy.....\$1 00 \$7 50

SPRING-BLOOMING SPIRAEAS

- Spiraea Arguta** (Hybrid Snow Garland). A very fine and showy variety. Leaves narrow, bright green fading into tones of yellow and salmon. Blooms in early spring. Height 3 to 5 feet.
- S. Opulifolia aurea** (Golden leaved Nine-bark). A strong-growing variety, with golden-tinted leaves and white flowers. Very conspicuous.
- S. prunifolia flore pleno** (Bridal Wreath). A beautiful early-blooming variety, with small, double white flowers. Commences to bloom early in March.
- S. Reevesiana** (Reeves' Single Spiraea). Produces large clusters of single white flowers which cover the entire plant. A desirable early spring bloomer.
- S. Reevesiana flore pleno** (*S. Cantonensis flore pleno*). With large, round clusters of double white flowers, which cover the entire plant. A most desirable early spring bloomer. Commences to bloom latter part of March and continues for several weeks. One of the best.
- S. Thunbergii** (Common Snow Garland). A beautiful dwarf variety, with many slender branches, forming a dense bush. The leaves in autumn assume brilliant shades of orange and scarlet. Profuse bloomer. Desirable for a low hedge.
- S. Van Houttei** (Van Houtte's Spiraea). A graceful shrub, growing 6 to 8 feet in height. Produces a profusion of single white flowers during the latter part of March. Deservedly one of the most popular Spiraeas grown.

PERPETUAL-BLOOMING SPIRAEAS

- Spiraea Anthony Waterer** (Crimson Spiraea). An improvement upon *S. Bumaldi*. A remarkably free-flowering shrub, with upright branches. Attains a height of about 3 feet. Leaves bright green, with frequent variegations of yellow. If blooms are cut off as soon as they begin to fade, the plant will bloom throughout the entire season. Makes a beautiful low-growing hedge.
- S. Billardii**. A tall grower. Flowers bright pink, produced in long, dense panicles. Very showy and attractive.
- S. callosa alba**. Flowers white, of very dwarf growth. A neat and desirable variety. Commences to bloom early in April.
- S. Fortunei macrophylla**. A variety with very large leaves, which are tinted purple, making the plant very conspicuous. Very effective for borders or groups.
- S. Frœbelii**. A fine, free-blooming sort. Flowers rose-colored, in panicles.

Syringa, or Lilac

Stephanandra flexuosa

A very desirable shrub with drooping branches. Closely allied to the Spiraea. Native of Japan. Attains a height of 3 to 4 feet. The serrated borders of the leaves are tinged with red at the time of unfolding. During summer the leaves are deep glossy green, in autumn tints of reddish purple are assumed. Flowers white, small, but are so numerous that the plant is very showy. Blooms early in May.

	EACH	10
15 to 18 in., bushy.....	\$0 25	\$2 00

Stuartia pentagyna. Alleghany Stuartia

A beautiful native shrub, growing to a height of 5 to 10 feet. In early summer produces cup-shaped white flowers, 2 to 3 inches in diameter; stamens white and golden anthers. Very showy and desirable.

	EACH	10
2 to 3 ft., bushy.....	\$0 75	\$6 00

Styrax Japonica. Japanese Storax

A beautiful Japanese shrub with spreading branches and bright green leaves. Fragrant flowers produced in drooping racemes. Attains a height of 8 to 12 feet. Blooms in April. Very desirable.

	EACH	10
18 to 24 in.....	\$0 50	\$4 00

Symphoricarpos racemosus

Snowberry

A graceful shrub, growing 4 to 6 feet tall, slender, drooping branches; flowers white, followed by clusters of white berries which remain upon the plant for many months. Very ornamental.

	EACH	10
2 to 3 ft. plants.....	\$0 25	\$2 00

Syringa. Lilac

Very valuable and desirable early spring-blooming shrubs; commence blooming last of March. Succeed best in strong soils. The following are all desirable and distinct sorts.

All grafted plants:	EACH	10	100
Extra heavy, 3 to 4 ft.....	\$0 60	\$4 00	\$30 00
Heavy, well branched, 2 to 3 ft.....	50	3 00	20 00
Branched, 18 to 24 in.....	25	2 00	15 00

SINGLE VARIETIES

- Charles X.** Dark lilac-red.
- Frau Dammann.** A fine white, with large panicles of flowers of medium size. An early bloomer.
- Gloria Rupella.** Dark lilac. Extra early. Profuse bloomer.
- Japonica** (Japan Tree Lilac). Flowers creamy white, in large panicles. A late bloomer; becomes a good-sized tree.
- Ludwig Spath.** Dark purplish red. Very distinct; a good sort.
- Pekinensis** (Chinese Lilac). A large-growing variety, with tall, slender, spreading branches. Flowers creamy white, in large panicles. Old plants are very floriferous. A late bloomer.
- Prof. Stockhardt.** Lavender; large trusses; extra early. An extra-good sort.
- Uncle Tom.** Dark lilac-blue. One of the darkest varieties that we grow; much darker than Ludwig Spath. An extra good early bloomer.

DOUBLE VARIETIES

- Alphonse Lavallee.** Blue, shaded violet; large panicles; a good sort.
- Belle de Nancy.** Very large; satiny rose, white toward center. A very fine variety.
- Charles Joly.** Very dark reddish purple. Excellent.
- Comte de Jessieu.** Lilac-blue; very fine.
- Comte Horace de Choiseul.** Porcelain-blue in bud, white when open. Fine large trusses; profuse bloomer.
- Emile Lemoine.** Rosy lilac; very large and beautiful.
- La Tour d'Auvergne.** Flowers very large, violet-purple. An extra good sort, and one of the most profuse bloomers in our list.
- Le Gaulois.** Purplish lilac.
- Louis Henri.** Rosy lilac; extra fine; blooms early.
- Mme. Casimir Perier.** Beautiful white flowers in large and compact panicles. One of the most prolific whites.
- Matthieu de Dombasle.** Reddish mauve; buds purplish.
- Michael Buchner.** Pale lilac; very large panicles.
- Prest. Carnot.** Pale lilac. A fine early bloomer.
- Pyramidalis.** Pale lilac; carmine in bud. An extra fine, profuse bloomer.
- Renoncule.** Purplish lilac. A free bloomer; an extra fine sort.

ORNAMENTAL DEPARTMENT

Tamarix. Tamarisk

Tall-growing shrubs, with slender branches and small, delicate leaves, which resemble the cypress. Flowers small, pink, produced in great abundance. An excellent plant for the seashore.

	EACH	10	100
Very heavy, well branched. 5 to 6 ft.	\$0 50	\$4 00	
4 to 5 ft.	25	2 00	\$15 00

Tamarix Gallica (French Tamarisk). Foliage light glaucous green; flowers pink in summer.

T. hispida Estivalis. A new variety of vigorous growth. In May the branches are covered half their length with numerous bright carmine-pink flowers, which gives the plant a most pleasing appearance. Blooms for a long time. Awarded first prize at the Paris International Exposition in 1900.

T. Odessana (Caspian Tamarisk). A new variety, with pale rose flowers, blooming earlier than *T. Gallica*.

T. plumosa, or **Japonica** (Japanese Tamarisk). Of medium height; foliage very graceful and feathery. A fine plant. Blooms middle of April.

Viburnum. Snowball Family

Viburnum Lantata (Wayfaring Tree). A large shrub, 10 to 15 feet tall. Flowers white, produced in large cymes in April. Berries bright red, changing to black.

	EACH	10
4 to 6 ft., heavy, branched.	\$1 00	\$8 00
3 to 4 ft., heavy.	50	4 00
2 to 3 ft.	25	2 00

V. Opulus (High-bush Cranberry). A tall shrub, with spreading branches. Flowers single white, produced in flat clusters in latter part of April. Berries scarlet; these remain all winter. Very showy.

	EACH	10	100
2 to 3 ft., heavy.	\$0 35	\$3 00	\$25 00
18 to 24 in.	25	2 00	15 00

Viburnum Opulus sterilis (Common Snowball; Guelder Rose). Produces large, globular clusters of white flowers in April. An old favorite.

	EACH	10	100
3 to 4 ft., very heavy.	\$0 50	\$4 00	
2 to 3 ft., well branched.	35	2 50	\$20 00
18 to 24 in., branched.	25	2 00	15 00

V. plicatum (Japanese Snowball). A beautiful variety of upright, bushy growth; produces heads of white flowers in great profusion. Far superior to the old Snowball. Blooms early in April; lasts several weeks

	EACH	10	100
Strong plants, 2 to 3 ft.	\$0 50	\$4 00	\$30 00

Vitex. Chaste, or Hemp Tree

	EACH	10
4 to 6 ft., well branched.	\$0 50	\$4 00
3 to 4 ft., well branched.	35	3 00
2 to 3 ft., branched.	25	2 00

Vitex Agnus-Castus. This is a valuable shrub, or medium-growing tree. Flowers in spikes, lilac color, blooming early in May and lasting for a long time.

V. Agnus-Castus alba. Same as above, but white-flowering.

Weigela (Diervilla)

Hardy, profuse-blooming shrubs of spreading habit. These are amongst the showiest of the garden shrubs, producing in early April great masses of showy flowers.

	EACH	10	100
3 to 4 ft., bushy plants.	\$0 40	\$3 00	\$25 00
2 to 3 ft., strong plants.	25	2 00	15 00

Weigela candida. Pure white; excellent.

W., Eva Rathke. Flowers deep carmine-red; profuse bloomer, and continues in bloom for a long time.

W. nana variegata. Of dwarf habit, with silvery variegated leaves; flowers nearly white; stands the sun well.

W. Van Houttei. Crimson.

WISTARIA (Standard, or Tree). See page 35.

A border of Hardy Perennials

Hardy Perennial Plants

Of the many plants that are grown for ornamental purposes, there are few, if any, which have sprung more rapidly into popular favor than the old-fashioned hardy garden flowers.

With a proper selection of varieties, one can have perpetual bloom from early spring until frost. These hardy perennial plants are especially effective when planted in open border, having for a background a hedge, fence or trellis, or interspersed with hardy shrubs or evergreens.

We offer a few varieties which have given excellent results in this locality.

In many cases, the following plants are sent out in the form of dormant roots.

AQUILEGIA (Columbine).	EACH	10
Strong plants, mixed colors.	\$0 15	\$1 25

H. Fulva (Tawny Day Lily).....	15	1 25	
H., Gold Dust. Very fine golden yellow flowers in July and August.....	25	2 00	

HIBISCUS (Mallow), Meehan's Mallow Marvels. These are most desirable perennials. They produce flowers of immense size and in a great variety of colors—white, every shade of pink, red and crimson. They bloom continuously from early summer until frost. No garden is complete without this beautiful plant. Strong 2-year roots, 40 cts. each, \$3.50 for 10.

See page 41 for our list of Specimen Conifers for immediate effect

Iris Kämpferi

IRIS Germanica (German Iris, or Flag). The German Iris is one of our most desirable early spring-blooming plants. It is a vigorous grower and is of easy cultivation. Flowers are large and conspicuous. The colors are white, blue, purple, yellow and variously veined and striped. Every garden should contain a collection of these Flags. We offer ten distinct named varieties. EACH 10 100
Strong roots.....\$0 15 \$1 25 \$10 00

I. Kempteri (Japanese Iris). These handsome spring-blooming plants are becoming popular. They begin blooming about the middle of April, and continue in bloom for five or six weeks. Many of the blooms have a diameter of from 8 to 12 inches, and are of various colors—white, purple, violet, mauve, magenta, variously marked and penciled. They are invaluable in herbaceous plantings, are extremely hardy and easily cultivated. Most effective where planted along border of pond or stream where the colors are affected. With proper attention the Iris will give a wealth of bloom and color. We offer twelve of the best-named sorts, 25 cts. each, \$2 for 10, \$17.50 per 100.

Herbaceous Peonies

PEONIES, Herbaceous. The varieties we offer have been thoroughly tested in this locality, and have given most satisfactory results. We offer twelve to fifteen best sorts, double and single, white and several shades of pink, rose and red. Peonies do best in rich, deep, rather moist loamy soil, and, if plants are protected from the hot afternoon sun, they will give excellent results. They should have a liberal supply of water at all times, especially when in bloom during April and May. Fertilize well with cow manure, as they are heavy feeders. Keep the ground well cultivated. If these few simple directions are carried out, the result will be most satisfactory. Plant during fall. 25 cts. each, \$2 for 10, \$17.50 per 100.

ORNAMENTAL DEPARTMENT

Avenue of American White Elm

DECIDUOUS TREES

The planter is beginning to appreciate the vast difference between a thrifty, well-grown nursery tree, and one taken from the forest. All of our nursery trees have been several times transplanted, and plenty of space given in the rows. The root system is perfect, and when our nursery-grown shade trees are properly transplanted and pruned there should be no loss. Of course, the initial cost of a nursery-grown tree is somewhat more than one taken from the forest, but our trees grow off better, give more satisfactory results, and thus are cheaper in the end.

Directions for Planting and Pruning. Before setting out, cut off the broken or bruised roots, should there be any. Trees with branching heads should have the smaller branches cut out, and the larger branches cut back to within three or four buds of their base, but when a tree has an abundance of roots and a small top and few branches, then the pruning need not be so severe. However, when the roots are small and the top heavy then prune the tree severely. In many cases remove every lateral limb, preserving only the leader, and this, if too long, may be cut back to the proper height. Frequently large trees are transplanted without pruning. This neglect will often cause the tree to die. Dig the hole intended for the tree of ample size so when the young roots start out they will have soft ground in which to grow. The best fertilizer is well-rotted stable manure, thoroughly mixed with the soil.

Plant about 2 inches deeper than the tree originally stood in the nursery row, using the top soil for filling in around the roots. See that every interstice around the roots is thoroughly filled, and that every root is brought into contact with the soil. When the hole is nearly filled, pour in a bucket of water so as to set the soil around the roots, then fill in the balance of the hole and press the dirt gently with the foot. When the tree is planted, mulch with 5 or 6 inches of well-decomposed stable manure; this should extend over the circumference of the hole; keep free from grass and weeds and loosen up the soil occasionally.

Acacia Julibrissin (*Albizia Julibrissin*) Pink Mimosa Tree

A beautiful tree with spreading branches, which form a low, flat-topped head. Leaves divided into many leaflets; flowers borne at the tips of branches in large pink heads. A remarkably beautiful tree.

6 to 8 ft.....	75	7 00

ACER JAPONICUM. Japanese Maples

These beautiful dwarf Japanese Maples combine many attractive features, both in shade and color of foliage. The foliage is delicately and finely cut. The decorative value of these beautiful Maples has long been recognized by all lovers of beautiful trees.

The best effect is secured by planting the various kinds in a bed, thus securing a pleasing color effect. For this purpose the plants should be set about three or four feet apart. The Maples will give satisfactory results only when planted in a rich, heavy soil, and in a position where they can be protected from the afternoon sun. If these plants are kept well mulched, there will be no difficulty in growing them.

We offer about eight or ten of the best and most distinct and hardiest sorts.

Strong, 3-year, grafted pot-grown plants.....	EACH	\$1 00
---	------	--------

Aesculus rubicunda

Red-flowering Horse-Chestnut

A very fine ornamental tree. Red flowers produced in large heads, which form a beautiful contrast to the deep green leaves. Desirable for the colder sections only. \$1 each.

Aphananthe aspera

Chinese Hackberry, Sugarberry, or Nettle Tree

This is the beautiful Yenoki of the Japanese Gardens. The tree is of rapid growth with spreading branches; foliage deep green; bark smooth. A most desirable and rare shade tree. A twenty-five year old tree, now standing in our grounds, has a height of 40 feet with a corresponding spread.

5 to 6 ft., stocky, branched.	50	4 00	30 00

Idesia polycarpa

A beautiful and very rare Japanese tree, which attains a height of 40 to 50 feet. Very large, heart-shaped leaves, borne on reddish stems, make this a most attractive and ornamental tree. The flowers are in loose clusters, of a greenish yellow, and very broken. They are inconspicuous. The orange-colored berries add to the beauty of this tree. Hardy at Philadelphia.

	EACH	10
Heavy, 4 to 5 feet.	\$0 75	
Strong, 3 to 4 ft.	50	\$4 00

Koelreuteria paniculata

Golden Rain Tree

A most beautiful hardy ornamental shade tree from China. It has a flat, spreading head of large pinnate leaves, and, during the latter part of May, produces large panicles of orange-yellow flowers, which completely envelop the entire head of the tree. The blooming season lasts three weeks. Becoming a great favorite for lawns and parks. We recommend this highly.

	EACH	10	100
8 to 10 ft., very heavy, 1 1/4 to 1 1/2 in. cal.	\$1 00	\$8 00	\$70 00

2 to 3 ft., well branched.	75	6 00
18 to 24 in., branched.	50	4 00

M. stellata (Halleana). Starry Magnolia. Of dwarf habit. Flowers semi-double, pure white and fragrant. Blooms from two to three weeks earlier than other Magnolias. 2 to 2 1/2 ft., \$2.50 each.

M. Soulangeana (Soulange's Magnolia). Of vigorous habit. Flowers large, pink on outside and white inside. Beautiful variety. Blooms in March.

	EACH	10
3 to 4 ft., very heavy.	\$2 50	
2 to 3 ft., well branched.	1 00	\$8 00

M. Soulangeana nigra (Dark-flowered Magnolia). A comparatively new variety of vigorous and robust growth; dark purple flowers, several shades darker than *M. Soulangeana*, are produced freely. Its period of blooming commences in March, and the plants bloom spasmodically during the entire summer. Unlike the other varieties of early blooming Chinese Magnolias, owing to its later blooming period, all of the buds are never killed by late spring frosts.

	EACH	10
6 to 8 ft., very bushy specimens.	\$3 50	\$30 00
2 to 3 ft., branched.	1 00	

Magnolia acuminata. Cucumber Tree

A native variety of rapid growth and fine shape. EACH 10

8 to 10 ft., very heavy.	\$1 50	
6 to 8 ft., very heavy.	1 00	\$8 00

Melia Azedarach umbrauliformis

Texas Umbrella Tree; Umbrella China

A sub-variety of the China Tree. It assumes a dense, spreading head, resembling a gigantic umbrella. It is of unique appearance, and a most desirable shade tree of rapid growth. Blooms middle of April.

	EACH	10	100
7 to 8 ft., heavy branched, 1 1/2 to 2 in. cal.	\$1 25	\$10 00	\$80 00
6 to 7 ft., heavy branched, 1 1/4 to 1 1/2 in. cal.	1 00	8 00	65 00

3 to 4 ft., well branched.	30	2 50	17 50

Morus alba pendula

Teas' Weeping Mulberry

A beautiful and hardy weeping Mulberry. Forms a perfect umbrella-shaped head, with long, slender, willowy branches drooping to the ground. Most desirable for ornamenting lawns or parks, or for cemetery planting.

	EACH	10
Extra-heavy heads, budded on 5- to 7-ft. stems.	\$1 25	\$10 00
Strong 2-yr. heads, budded on 5- to 7-ft. stems.	75	6 00

Teas' Weeping Mulberry

ORNAMENTAL DEPARTMENT

Nyssa sylvatica. Tupelo

Sour or Black Gum

A native tree of robust habit. Grows naturally from Maine to Texas. Leaves dark, shining green; in autumn assuming tones of red and scarlet, which makes it a most desirable tree. Fruit dark blue. 4 to 5 feet, 50 cts. each, \$4 for 10.

Oxydendrum arboreum. Sourwood

A small tree, with slender, spreading branches, growing naturally from Pennsylvania to Louisiana. Leaves lanceolate, bright green. In autumn assumes dazzling tones of scarlet. Fragrant white flowers in panicles of spreading racemes, resembling Lily-of-the-Valley. A most desirable tree. Blooms in early summer. Ultimate height 25 to 50 feet. 2 to 3 ft., 50 cts. each, \$4 for 10.

Persica. Double-flowering Peach

	EACH	10	100
Extra-heavy trees, 5 to 7 ft.....	\$0	\$0	\$4 00
Strong trees.....	25	2 00	\$17 50

Persica Chrysanthemum (Chrysanthemum-flowered Peach). Flowers large, double pink, center quilled like a chrysanthemum. Extra-fine new variety. Originated in South Carolina.
P., Double Pink, White and Crimson. During March these trees are covered with a mass of beautifully formed and highly colored flowers. These trees can not be too highly recommended for spring blossoming. Perfectly hardy, and will thrive on any soil in which other Peaches will grow.

Platanus Orientalis

Plane Tree; European Sycamore

A popular European shade tree. Does well here. Not subject to blight like the native sycamores. Makes a large, spreading tree. Rapid grower. Succeeds well in either high or low situations. 6 to 8 ft., 50 cts. each, \$4 for 10.

Populus. The Poplar

Populus Caroliniensis (Carolina Poplar). A rapid-growing native tree of upright growth. A very popular shade tree, and widely planted. After the tree has attained a height of 15 to 20 feet, it is advisable to cut the leader. This will cause the tree to make a spreading head. The Carolina Poplar resembles the Cottonwood, but is quite distinct.

	EACH	10	100
8 to 10 ft., 1 to 1 1/2 in. cal.....	\$0	\$0	\$4 00
6 to 8 ft., 3/4 in. to 1 cal.....	25	2 25	20 00

P. fastigiata (Lombardy Poplar). A tall, pyramidal compact-growing tree, rapid grower and very hardy. Widely planted in the southern part of Europe. We can supply trees with 4-foot bodies, and others whose limbs start at the ground. Therefore, in ordering, please state the class of tree desired.

	EACH	10	100
12 to 14 ft., 1 1/2 to 2 in. cal.....	\$1	00	\$8 00
10 to 12 ft., 1 1/4 to 1 1/2 in. cal.....	75	6 00

Prunus. Plum

	EACH	10	100
5 to 7 ft., extra heavy.....	\$0	\$0	\$3 00
4 to 5 ft., strong trees.....	25	2 00	17 50

Prunus Mume. (Japanese Double-flowering Apricot). A very early blooming variety. In March the tree is entirely covered by a mass of beautiful double pink blossoms, making a most pleasing tree for the lawn. The bark being a light shiny green gives the tree a most conspicuous appearance. Ultimate height 10 to 15 feet.

P. Pissardi (Persian Purple-leaf Plum). The most valuable of all the purple-leaved trees. It retains its deep color throughout the warmest weather, and its leaves until mid-winter. We cannot endorse it too highly.

Pyrus spectabilis

Double-flowering Chinese Crab Apple

A small-sized tree, producing double pink flowers. Very handsome in bloom. 4 to 5 ft., 25 cts. each, \$2 for 10.

Quercus. The Oak

All of our Oaks have been transplanted several times, but nevertheless must be severely pruned.

Quercus nigra (*Quercus Aquatica*). Water Oak. This well-known variety, needs no description. EACH 10 100
 6 to 8 ft., heavy.....\$0 75 \$6 00
 5 to 6 ft., heavy.....50 4 00 \$30 00

Quercus palustris (Pin Oak). A very handsome variety, with drooping branches. The tree is shapely and symmetrical; leaves are of a beautiful tone of green, in autumn fading to a brilliant scarlet. This is one of the most desirable trees for street and avenue planting. EACH 10 100
 10 to 12 ft., 2 to 2 1/2 in. cal., very

Virgilia lutea (Cladrastis)

Yellow Wood

A medium-sized tree, with spreading, somewhat pendulous branches, with a symmetrical round head. Leaves bright green, turning golden early in autumn. In early spring, white flowers are produced in loose, drooping panicles. A desirable lawn tree.

	EACH	10	100
2 to 3 ft.....	\$0	25	\$2 00
4 to 5 ft.....	50	4 00	

A mass planting of *Abelia grandiflora*

BROAD-LEAVED EVERGREENS AND SHRUBS

We can supply large specimen plants of nearly all of the evergreens in the following list. Prices, sizes and descriptions will be given upon application. The plants are all carefully grown, and are in fine condition.

Most of the plants are grown in pots, thereby increasing safety in transplanting, and with less danger of loss from removal. Those marked "O. G." are taken from open ground, but lifted with balls of earth about the roots, and same wrapped in moss and excelsior, or burlaps.

In this section we are particularly fortunate in the wealth of Broad-leaved Evergreen Trees and Shrubs. We can grow here many very desirable varieties which are not hardy in the far North, and we can also successfully bring to perfection a very large proportion of the hardy northern varieties. A judicious selection and planting of evergreen trees and shrubs enhances wonderfully the winter aspect of our grounds. Certain varieties must be given the proper exposure for them to attain satisfactory results. If evergreens are kept mulched with well-rotted leaves, this prevents the rapid evaporation of moisture from the soil, and also protects the roots from sudden changes of temperature.

It is advisable to partially defoliate nearly all Broad-leaved Evergreens lifted from open ground. This will lessen the loss from transplanting, as many trees die if transplanted with all of the leaves left on. This is especially so as to Magnolias, Photinias, Crataegus and Ligustrums.

We will supply 10 plants, our selection of varieties, standard sizes, for \$4 00
 100 plants, our selection of 25 varieties, standard sizes..... 25 00

Abelia grandiflora (rupestris)

One of the most satisfactory broad-leaved dwarf shrubs. Graceful, drooping stems and branches are covered with dark glossy leaves, in the winter assuming a metallic sheen. Produces an immense quantity of tubular-shaped white flowers, about an inch long, which are borne in clusters from last of May until frost.

	EACH	10	100
24 to 30 in., strong, from 4-in. pots and open ground.....	\$0 75	\$6 00	\$50 00
18 to 24 in., strong, from 4-in. pots and open ground.....	50	4 00	30 00
12 to 18 in., strong, from 3-in. pots.....	25	2 50	20 00

Andromeda floribunda (*Pieris floribunda*) Mountain Fetter Bush

A fine evergreen shrub, attaining a height of 2 to 4 feet. A native of the Alleghany mountains. Leaves dark green; showy white flowers produced in panicles in early spring. A most desirable evergreen. Very scarce. Strong, 12- to 18-in. clumps, \$2 each.

Arbutus unedo. Strawberry Tree

A very rare and desirable broad-leaved evergreen. Attains a height of 15 feet. Foliage dark glossy green. Flowers white, bell-shaped, produced in early spring in great profusion, followed by pretty scarlet fruit which is retained until late winter.

	EACH	10
Extra-strong plants, from 4-in. pots, 18 to 24 in.....	\$0 75	
Strong plants from 4-in. pots, 12 to 18 in.....	50	\$4 00

Ardisia crenulata rubra

A dwarf-growing shrub, with dark, shining leaves. Produces a profusion of red berries, which remain upon the plant for a year. Succeeds best in a shady situation. Hardy southward.

	EACH	10	100
8 to 10 in., from 4-in. pots.....	\$0 50	\$4 00	
6 to 8 in., from 3-in. pots.....	35	3 00	

Aucuba. Gold Dust Tree

This genus contains both male and female plants; if the latter are planted near the male plants they produce a profusion of red berries, which make them very attractive. Succeeds best in a shady situation.

Prices, except where noted:	EACH	10	100
40 to 48 in., O. G., well branched.....	\$2 00	\$15 00

6 to 8 in., branched.....	25	2 00	\$17 50

ORNAMENTAL DEPARTMENT

AZALEA, continued

Azalea Hinodegiri. A magnificent hardy Japanese variety; decided improvement upon *A. amoena*, which it somewhat resembles in habit of growth, but is a more vigorous grower and foliage is heavier. Bright carmine flowers are produced in enormous quantities. In fact, when in full bloom, the plant is almost a solid mass of color. Remains in bloom for a long period. In the winter and fall months the foliage assumes a reddish appearance. This variety is hardy North.

We can supply a few very fine specimen plants at from \$3 to \$15 each

We have over fifty varieties in our collection, and have 10,000 salable plants in stock this year. The colors include pure white, all shades of crimson, scarlet, purple, salmon, and with exquisite variegations, mottlings, stripes, blotches, etc. Single and double flowers. We grow Azaleas in very large quantities, and annually add many of the new European varieties. All our plants are grown in open ground during summer and lifted in October, when they are in the most healthy condition. In this latitude it is best to plant Azaleas in open ground in March, but southward they can be safely planted from October until April.

These beautiful shrubs are perfectly hardy in this latitude, but succeed best in a somewhat shady situation, and in a light soil containing an abundance of leaf-mold. They are of the greatest value for all purposes, either for massing or as single specimens in open ground, or for the decoration of conservatories or rooms.

If the plants are grown in pots, they should be repotted after flowering and before the new growth begins. Keep the plants sheltered for a few days and then plunge the pots in open ground in a shady situation, or they may be planted in an open border and kept shaded.

If plants are required for winter blooming in conservatory, they should be lifted and repotted before very cold weather and kept in a cool greenhouse. By judiciously selecting the varieties, a continuous supply of flowers may be had from January until May.

Azaleas are liable to attacks of red spider and thrips, especially if plants suffer from want of proper watering. Daily syringing of plants kept under glass will aid in eradicating these pests, as also will a spray of sulpho-tobacco soap.

Potting soil should be composed of half peat, half leaf-mold and good loam; abundant drainage must be given.

The engraving, from photograph taken at Fruitland, well

Berberis Japonica

shows the superb proportions to which Indian Azaleas may be grown in this latitude. It will be noted, too, that they cover themselves with flowers in the same prodigal fashion set by the diminutive bushes with which our more northern customers are familiar.

A well-fed, -tended and -pruned Azalea need never grow scraggy and misshapen with age, but should become more beautiful every year, as its increasing spread of branches gives room for the display of myriads more of flowers. We believe that, by following the hints given above, any of our southern customers may own specimens as fine as those illustrated. Those who grow Azaleas in the house should remember that the flowers will last much longer if the plants are kept in a cool room after they have expanded.

AZALEA INDICA (Imported)

These beautiful plants are becoming more popular every year for forcing and for window, store and conservatory decoration. These plants are also adapted for open-ground planting. The Azaleas which we offer are all grafted and have bushy crowns, which are well set with flower-buds. We have about twelve to fifteen distinct varieties, double and single, white, all shades of red, pink, variegated, etc.

3 ft.....	3 00	
2 ft.....	1 50	

Camellia Japonica

IMPORTED PLANTS

These are bushy and shapely plants, but without flower-buds. The color ranges in all shades of red from a very pale pink to darkest crimson, and with flowers combining exquisite variegations, pencilings, mottlings, etc. Whilst we import a large quantity of Camellias from the largest and most reliable European growers, we cannot always guarantee that every plant of the colored section will come true to label in every instance, and we have to purchase and sell under those conditions.

White Varieties

Double White (Alba plena and Mathotiana alba):

20 to 24 in., well branched.....	1 50
18 to 20 in., well branched.....	1 25
15 in., well branched.....	1 00

HOME-GROWN PLANTS

We annually grow ten to fifteen thousand Camellias. The demand for this old favorite is annually increasing. All of the plants we offer are propagated from our own specimens, which are grown in open ground. Our selection contains nearly one hundred varieties, and the plants we offer comprise a great range of colors, also early- and late-blooming varieties. In the home-grown section we do not offer any *C. alba plena*.

Cultivation of Camellias

FOR OPEN GROUND.—A partially shaded situation, especially where protected from the cold winds of winter, is most desirable. Any good garden soil is suitable, but, if mixed with leaf-mold, better results may be expected. The best seasons for transplanting are from early October to beginning of November, and from end of February to end of March. Mulch the plants with well-rotted manure.

FOR CONSERVATORIES.—Use a potting compost of peat or leaf-mold and good loam, and give ample drainage. When in growth, they require an abundance of water and spraying of the foliage. When dormant, water sparingly and keep in cool temperature. Fire heat is not needed except during excessively cold weather, which would injure distending buds. Dropping of buds is caused by plants becoming too dry or by over-watering, or being kept under high temperature under glass.

	EACH	10	100

18 to 24 in., bushy.....	25	2 25	20 00

Cotoneaster Buxifolia (Box-leaved Cotoneaster). A low-growing evergreen, with small, dark green leaves; white flowers produced in spring, followed by red berries, which are retained during winter.

C. Simonii (Nepalense). Attains a height of about 4 feet; dark green leaves; flowers white, slightly pinkish, followed by bright red fruit. One of the best.

If you want a fine lawn use "Fruitland Mixture"

ORNAMENTAL DEPARTMENT

Escallonia montevidensis

Crataegus Lalandi (*Pyracantha coccinea*)

Evergreen Thorn; Laland's Pyracantha

A sub-variety of the evergreen variety of the Burning Bush. A desirable and beautiful shrub. In early April it produces a great profusion of white flowers, which are followed by bright orange berries, which are retained during winter.

	EACH	10	100
3 to 4 ft., extra-strong plants.....	\$0 75	\$6 00	
2 to 3 ft., well branched.....	50	4 00	
18 to 24 in., strong plants.....	35	3 00	\$25 00

Elaeagnus. Japan Oleaster

We cannot too highly recommend these beautiful shrubs, which are perfectly hardy here, do not require very rich soil, and are not affected by either extreme heat or cold. The variegated foliage varieties are exceedingly showy.

Prices, except where noted	EACH	10	
12 to 15 in., grafted.....	\$0 50	\$4 00	

Elaeagnus aurea maculata. Leaves with broad, yellow blotches. Produces in March red fruit the size of a cranberry, which, combined with the variegated foliage, makes a most unique plant.

E. Frederici variegata. A dwarf shrub with undulated leaves; light yellow center, margin green. Very distinct.

E. macrophylla. Leaves very large, undulated, clear green on upper side, silvery white beneath. A showy and conspicuous shrub.

E. Fungens variegata. Leaves very light green, margin yellowish white. Produces fruit same as *aurea maculata*.

E. Simonii (Simon's Oleaster). Foliage elongated, silvery on under side; of compact growth; has edible fruit. A most desirable plant for the lawn.

12 to 15 in., pot-grown.....	25	2 00	17 50

Gardenia florida. Flowers very large, white and very fragrant; foliage glossy.

G. Fortunei. Flowers larger than those of *G. florida*.

G. radicans. A very dwarf trailing Cape Jasmine; foliage very small; flowers white, very fragrant. Most desirable where a low effect is desired. 6 to 8 in. plants, branched, 25 cts. each, \$2 for 10.

Gardenia Veitchii, or Jasminoides. Flowers and foliage smaller than those of *G. florida*; flowers white, very fragrant; best variety for forcing. Hardy at Charleston and southward only.

	EACH	10	100
18 to 24 in., bushy.....	\$0 75	\$6 00	
12 to 15 in., well branched.....	50	3 50	\$25 00
8 to 12 in., branched, from pots.....	25	2 00	17 50

Ilex. Holly

Ilex aquifolium (English or European Holly). Leaves of intense deep shiny green, with undulating spine-tipped margins. Berries bright scarlet, which, combined with the glossy green leaves, make this a conspicuous plant for winter effect.

	EACH	10	
Strong plants, 15 to 18 in., from pots.....	\$0 75	\$6 00	
Strong plants, 10 to 15 in., from pots.....	50	4 00	

I. crenata (Japanese Holly). A much-branched evergreen shrub, with oval crenate leaves. Makes a splendid specimen, and is also very desirable for hedge planting. Berries black.

	EACH	10	
12 to 15 in., bushy, from open ground.....	\$0 50	\$4 00	

I. opaca (American Holly). In transplanting the native Holly select small plants only, and remove all the leaves; otherwise it is difficult to make the plant survive.

	EACH	10	
30 to 36 in., from pots.....	\$1 00	\$8 00	
24 to 30 in., from pots.....	75	6 00	
15 to 18 in., from pots.....	50	4 00	

Illicium anisatum (Religiosum)

East India Anise Tree

A handsome evergreen, with broad leaves, which, when bruised, emit an anise fragrance. Very desirable.

	EACH	10	
3 to 4 ft., well branched.....	\$1 00	\$8 00	
2 to 3 ft., well branched.....	75	6 00

12 to 15 in., branched.....	25	2 00	

Kalmia latifolia. Calico Bush

A beautiful native, broad-leaved evergreen shrub, often attaining the size of a small tree. Its thick, waxy leaves are retained the year round, giving a striking effect. The pink and white geometrically-shaped buds appear and expand into beautiful white and flesh-colored flower cups. Of greatest value for massing, making a handsome effect in the landscape.

	EACH	10	100
Extra-strong clumps (O. G.), 18 to 24 in.....	\$2 00		
Extra-strong clumps (O. G.), 12 to 18 in.....	1 25	\$10 00	
18 to 24 in., bushy (O. G.).....	1 00	8 00	
12 to 18 in., bushy (O. G.).....	50	4 00	\$30 00

Laurocerasus. English, or Cherry Laurel

These are valuable shrubs. Their principal merits are great vigor, beautiful, broad, shiny foliage; of easy cultivation and thrive in any ordinary good soil. For massing, or as single specimens, few plants possess more advantages.

Prices, except where noted:

	EACH	10	100
3 to 4 ft., heavy, well branched (O. G.).....	\$1 50		
30 to 36 in., heavy, well branched, (O. G.).....	1 25	\$10 00

Kalmia latifolia

ORNAMENTAL DEPARTMENT

Laurocerasus Colchica

LAUROCERASUS, continued

- Laurocerasus Bertini.** Foliage very broad; dark green.
- L. Caucasicus.** Foliage broad, light green. A fine sort.
- L. Colchica.** Dark foliage, which is gray-green beneath.
- L. latifolia.** Leaves narrow, long and dark green.
- L. Lusitanica** (Portugal Laurel). A very distinct variety, with numerous glossy green leaves, of compact growth. White flowers, produced in spring. Not quite so hardy as the other varieties of this species.

EACH	10
18 to 24 in., from pots.....	\$0 75 \$6 00
12 to 18 in., 4-in. pots.....	50 4 00
- L. rotundifolia.** Leaves short, broad, light green.
- L. rotundifolia viridis.** Foliage short, oblong, dark green.
- L. Versaillensis.** Broad foliage. Quite distinct.

Laurus. Laurel

- Laurus nobilis** (Spice, or Apollo's Laurel). A beautiful evergreen, with long, narrow, glossy green leaves, which are very aromatic, and are used in cooking. 12 to 15 in., from 4-in. pots, 50 cts. each.
- L. regalis.** A variety of Spice, or Apollo's Laurel. Leaves beautifully crimped. A distinct variety. 12 to 15 in., from 4-in. pots, 50 cts. each.

Ligustrum. Privet

- Ligustrum Amurense** (Amoor River Privet). True. From Amoor River. Very rapid and compact grower; foliage small. No finer hedge plant is grown. (See under head of Hedge Plants, page 36.) Plants are also desirable for single specimens, or for windbreaks; for latter, plant 8 to 10 feet apart. Strong, bushy plants, 3 to 4 ft., 25 cts. each, \$2 for 10, \$15 per 100.
- L. Amurense** (Amoor River Privet), **Specimens.** We offer some very fine plants, 5 to 6 feet high, 24 to 30 inches in diameter, very bushy and compact, several times trimmed; for immediate effect. Either for a large hedge or individual specimens, these plants are very desirable. \$2 each.
- L. excelsum superbum.** A tall-growing form of Japanese Privet. Leaves beautifully variegated; stands sun to perfection; an excellent plant. Most effective for massing.

EACH	10	100
3 to 4 ft., grafted, very bushy.....	\$1 00	\$8 00
2 to 3 ft., grafted, bushy.....	75	6 00 \$50 00
18 to 24 in., grafted, well branched....	50	4 00 35 00
- L. Japonicum** (Japanese Privet). A beautiful, broad-leaved variety. Foliage dark green, with panicles of white flowers, followed by purple berries. Can be grown into a small tree and trimmed in pyramidal, standard or other forms.

EACH	10	100
5 to 6 ft., extra heavy (O. G.).....	\$2 00	\$17 50
4 to 5 ft., extra heavy (O. G.).....	1 50	12 50 \$100 00
3 to 4 ft., heavy (O. G.).....	1 00	8 00 70 00
2 to 3 ft., well branched (O. G.).....	50	4 00 30 00

Ligustrum Japonicum, Standards. These trees have trained heads, similar to the Standard Bay Trees. Where a cheap substitute for the Bay is desired for either tubs or open ground, the above-mentioned Standard Privet is most desirable, as the plant is perfectly hardy in the South. These plants are from open ground, but have been several times transplanted, and will be lifted and shipped with a ball of earth about the roots.

- L. lucidum.** Another form of Japanese Privet. Leaves large, thick, ovate-lanceolate, of a very dark shiny green. Plant of rather open growth. Attains a height of 20 feet. A very handsome plant. Quite hardy.

EACH	10	100
3 to 4 ft., very bushy.....	\$1 50	
2 to 3 ft., very bushy.....	1 00	\$8 00
18 to 24 in., well branched.....	50	4 00 \$30 00
- L. macrophyllum.** An exceedingly rare and beautiful form of the Japanese Privet. Leaves of immense size, and of intense dark green color. A most distinct and attractive variety.

EACH	10	100
18 to 24 in., strong grafted plants, very bushy.....	\$1 00	\$8 00
15 to 18 in., strong grafted plants, bushy.	75	6 00 \$50 00
12 to 15 in., strong grafted plants.....	50	4 00
- L. Manda's Golden.** Leaves small, center green, beautifully margined with golden yellow. A very fine variety. 12 to 15 in., very bushy, 50 cts. each, \$4 for 10.
- L. marginatum aureum** (Golden Margined Privet). A vigorous-growing variety, with large leaves beautifully margined with yellow. Stands the sun well. A desirable variety.

EACH	10	100
3 to 4 ft., grafted, very bushy (O. G.)...	\$1 00	\$8 00
2 to 3 ft., grafted, heavy (O. G.).....	75	6 00 \$50 00

24 to 30 in., bushy.....	75	6 00	50 00
18 to 24 in., bushy.....	50	3 50	30 00

L. ovalifolium (California Privet). Growth erect; leaves larger than *L. Amurense*, but not equal to the latter as a hedge plant. It is grown North and West in large quantities.

	EACH	10	100	1,000
3 to 4 ft., from open ground, well branched, 2 yrs.....	\$0 25	\$2 00	\$15 00	
24 to 30 in., for hedges, from open ground.....		4 00	\$30 00	

Magnolia

Magnolia fuscata. A most popular and desirable evergreen shrub. Hardy South, but for conservatories in the colder sections. Yellowish white flowers edged with maroon appear in great profusion in early spring. The banana-like fragrance is so strong that it is recognized at a distance of several feet from the plant.

	EACH	10	100
18 to 24 in., very bushy plants, from open ground.....	\$1 50		
18 to 24 in., strong plants, from pots.....	1 00	\$8 00	\$70 00
15 to 18 in., strong plants, from pots.....	75	6 00	50 00
12 to 15 in., strong plants, from pots.....	50	4 50	40 00
10 to 12 in., strong plants, from pots.....	40	3 50	30 00
8 to 10 in., strong plants, from pots.....	35	3 00	25 00

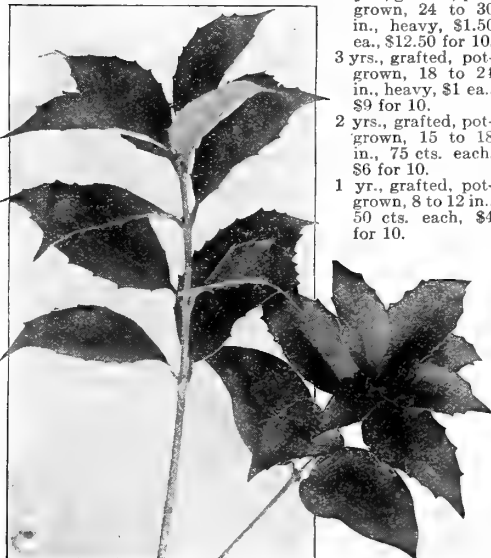

M. grandiflora (Southern Magnolia). This is the grandest of all our native broad-leaved evergreen trees. It is a native of the middle sections of the southern states, and succeeds best in a rich soil. Nothing more conspicuous can be seen amongst evergreens, when its large white flowers are fully expanded. Their period of blooming begins the middle of April and lasts until August. Hardy at Philadelphia.

	EACH	10	100
15 to 20 in., from pots.....	\$0 50	\$4 00	\$30 00
12 to 15 in., from pots.....	40	3 00	25 00

2 to 3 ft., from open ground.....	50	4 00	27 50
18 to 24 in., from open ground.....	25	2 00	17 50

Note.—To lessen liability of loss from transplanting, leaves will be cut off from open-ground-grown plants, unless we are instructed to the contrary. Our Magnolias have been twice transplanted, and therefore have finely branched roots.

M. grandiflora gloriosa (Large-flowered Magnolia). A variety of *Grandiflora*, with flowers of immense size, often 12 to 15 inches in diameter; foliage large, bronze underneath; a magnificent tree; very scarce.

4 yrs., grafted, pot-grown, 24 to 30 in., heavy, \$1.50 ea., \$12.50 for 10.
 3 yrs., grafted, pot-grown, 18 to 24 in., heavy, \$1 ea., \$9 for 10.
 2 yrs., grafted, pot-grown, 15 to 18 in., 75 cts. each, \$6 for 10.
 1 yr., grafted, pot-grown, 8 to 12 in., 50 cts. each, \$4 for 10.

Osmanthus aquifolium

Myrtus communis. True Myrtle

A desirable shrub with strongly scented small green leaves. Flowers pure white, very fragrant. Hardy in the South only.

	EACH	10
Strong plants, 18 to 24 in.....	\$0 75	\$6 00
Strong plants, from 4-in. pots.....	50	4 00

Mahonia aquifolia

Berberis; Holly-leaved Ashberry

A beautiful, hardy, low-growing, evergreen shrub, with prickly leaves; produces a profusion of yellow flowers in March. In winter the foliage assumes a bronze or copper color.

	EACH	10	100
18 to 24 in., very heavy.....	\$0 50	\$4 00	
12 to 18 in.....	25	2 00	\$15 00

Nerium. Oleander

Neriums are all hardy in this latitude. They have also been successfully grown along the coast in southern New Jersey, but should be well protected during winter.

	EACH	10	100
20 to 30 in., strong plants, from 4-in. pots.....	\$0 75	\$6 00	\$50 00

Mme. Peyre. Pale flesh, double corolla.
Professor Parlatour. Pink, double corolla.
Single White. Heavy grower and almost continuous bloomer.
Splendens. Deep pink, double. Best of its color.

Olea fragrans. Tea, or Sweet Olive

One of the most desirable flowering shrubs of southern gardens. The white flowers, although small, are produced in clusters and emit the most pleasing fragrance. It is well said that "each individual bloom has more sweetness than the most fragrant lily." As a conservatory shrub for northern florists it will be found invaluable and of ready sale. The blooming period begins in the fall and lasts for several months. It is of easy culture and especially desirable as a window plant.

	EACH	10	100

Q. Suber (True Cork Oak). Grown from the best Spanish seed. Tree attains a height of 50 feet. A very ornamental variety. Thrives well here. The bark furnishes the cork of commerce. Difficult to transplant from open ground. We offer only pot-grown plants. 2 to 3 ft., 50 cts. each, \$4 for 10, \$30 per 100.

Ruscus aculeatus. Butcher's Broom

A unique dwarf evergreen shrub, with acute or spiny bract-like leaves 1/2 to 1 1/2 inches long. Produces numerous red berries, which are retained during winter. Strong plants, 25 cts. each, \$2 for 10.

Rhododendrons

Rose Bay, or Mountain Laurel

Rhododendron Catawbiense (Catawba Rhododendron). This is our native variety from the Alleghany mountains, and those who have visited these mountains can appreciate this grand plant. Flowers lilac-purple.

1 1/2 to 2 ft., bushy.....	EACH	10	\$1 50	\$10 00
1 to 1 1/2 ft., bushy.....	EACH	1 00	8 00	

R. Catawbiense, Hardy Hybrids. These magnificent plants cannot be too highly recommended for such sections where they will give good results. They are indispensable in the landscape. To secure the most pleasing effect they should be planted in large groups. The varieties vary in color from pure white to deep purple and all shades of rose, pink and crimson. The plants should be set in a rich, shady situation, and the soil should contain well-decayed leaf-mold and well-rotted manure. Keep the plants well mulched with rotted leaves. Not being deeply rooted, they are apt to be injured by drought. There is no plant which will give more satisfaction, or more pleasing effect, than the Rhododendron.

18 to 24 in., well-branched plants set with buds.....	EACH	10	\$2 00	\$15 00
15 to 18 in., well-branched plants set with buds.....	EACH	1 50	12 50	
12 to 15 in., well set with buds.....	EACH	1 25	10 00	

Rhododendron maximum (Great Laurel). Native of the Alleghany mountains. Produces large trusses of pure white flowers. Blooms later than *R. Catawbiense*.

1 1/2 to 2 ft., bushy.....	EACH	10	\$1 50	\$10 00
1 to 1 1/2 ft., bushy.....	EACH	1 00	8 00	

R. ponticum (Asiatic species). These beautiful shrubs are perfectly hardy, but require a shady situation and a soil rich in leaf mold. Blooms last of April. Never plant where exposed all day to direct sunshine.

Very bushy, well set with buds, 18 to 24 in.....	EACH	10	\$1 00	\$7 50
Branched, well set with buds, 15 to 18 in.....	EACH	75	6 00	

Thea Bohea. Chinese Tea Plant

The true Assam Tea Plant, the leaves of which are used for making the tea of commerce. This beautiful shrub produces during the winter large white flowers with woolly anthers, which have a resemblance to single camellias. A very desirable, low-growing, broad-leaved evergreen. Strong, 12 to 15 in., plants from 2 1/2-in. pots, 25c. ea., \$2 for 10, \$17.50 per 100.

Viburnum Tinus (see page 34)

ORNAMENTAL DEPARTMENT

Viburnum

Viburnum odoratissimum. A variety with broad, glossy green leaves; of compact growth, with pure white, fragrant flowers. Makes a beautiful plant. EACH 10 100
 2 to 3 ft., very bushy.....\$1 50
 24 to 30 in., well branched..... 75 \$6 00 \$50 00
 18 to 24 in., pot-grown..... 50 4 00 30 00

V. suspensum. Of very compact and rapid growth. Flowers creamy white, resembling the Trailing Arbutus; blooms in February and March. A most excellent plant. EACH 10 100
 12 to 15 in., pot-grown.....\$0 50 \$4 00 \$30 00
 8 to 12 in., pot-grown..... 25 2 50 20 00

V. Tinus (Laurustinus). One of the handsomest and most satisfactory broad-leaved flowering shrubs; of rapid growth; attains a height of 10 feet. The flowers are creamy white, produced in the greatest profusion in early February, and last for a long time; very fragrant. The buds before opening are of a bright red color. They begin to show in November, and gradually grow until February, making the plant most conspicuous. Makes a most unique hedge. EACH 10 100
 15 to 20 in., pot-grown.....\$0 50 \$4 00
 12 to 15 in., pot-grown..... 25 2 50 \$20 00

Yuca

Yuca aloifolia (Spanish Bayonet, or Dagger). The well-known native variety. Leaves very stiff, dagger-shaped; flowers creamy white. EACH 10 100
 Strong 5-yr. transplanted plants.....\$0 50 \$4 00 \$30 00
 Strong 4-yr. transplanted plants..... 40 3 00 20 00
 Strong 3-yr. transplanted plants..... 25 2 00 15 00

Y. filamentosa (Adam's Needle, or Bear Grass). A conspicuous plant with stiff evergreen foliage. The large clusters of creamy white flowers produced in summer make a fine effect. Excellent for massing. EACH 10 100
 Strong 5-yr. transplanted plants.....\$0 50 \$4 00 \$30 00
 Strong 4-yr. plants..... 40 3 00 20 00
 Strong 3-yr. plants..... 25 2 00 15 00

Y. Treculeana. This is a very rare and beautiful species from northern Mexico and southwest Texas. This variety is extremely difficult to obtain, but we have succeeded in raising a fine stock of vigorous plants. In early April flowers of ivory whiteness are produced in great profusion upon a compact stock. The flower-heads are sometimes 3 feet in length. The leaves are dark green, thick, very rigid and of unusual length. A single plant or a mass of these beautiful Yucas is a most conspicuous object. EACH 10 100

 Strong 3-yr. plants..... 35 3 00 25 00

CLIMBERS AND TRAILERS

10 strong plants, in 10 varieties, our selection, for \$2; \$15 per 100

Akebia

Strong plants, 2 years. EACH 10
 \$0 25 \$2 00
Akebia lobata. A beautiful Japanese Climber. Foliage very heavy. Flowers produced in long racemes, smaller than *Akebia quinata*. Produces fruit which is very popular in Japan, but it is not pleasing to the American palate.
A. quinata (Five-leaved Akebia). An ornamental Japanese climber, with beautiful foliage. Peculiarly shaped purple flowers, produced in March. Very desirable.

Ampelopsis. Ivy

Strong, field-grown plants. EACH 10 100
 \$0 25 \$2 00 \$15 00
 Strong plants, from 3-in. pots. 15 1 25 10 00
Ampelopsis quinquefolia (Virginia Creeper). A vigorous native climbing variety; leaves divided into five bright green toothed leaflets, in autumn changing to gorgeous shades of red and scarlet.
A. Veitchii (A. Japonica, or tricuspidata); (Japan, or Boston Ivy). A beautiful deciduous climber of very rapid growth; eminently suitable for covering brick walls, stumps, etc. One of the most beautiful and popular hardy climbers.

Antigonon leptopus. Mexican Rose

A beautiful climbing plant, with tuberous roots. Free bloomer during late summer. Flowers produced in large racemes of a most beautiful rosy pink color. Leaves heart-shaped. A most desirable vine for the South. Tops die down in winter. Very strong 2-year plants, 25 cts. each, \$2 for 10, \$15 per 100.

Bignonia. Trumpet Vine

Prices, except where noted EACH 10 100
 3 yrs., grafted, extra heavy.....\$0 40 \$3 00 \$25 00
 2 yrs., grafted..... 25 2 00 17 50
Bignonia capreolata (Bignonia crucifera); (Cross Vine). A very handsome, vigorous-growing native climber. In early April produces in great profusion trumpet-shaped flowers about 2 inches long, reddish purple on the outside with yellow throat. Fine for covering walls, arbors, or trunks of trees. Evergreen. EACH 10 100
 Strong clumps from open ground.....\$0 35 \$3 00 \$25 00
 Strong plants from 3-in. pots..... 25 2 00 15 00
B. grandiflora (Tecoma; Japan Trumpet Vine). A medium-growing climber, with large, deep orange flowers. When in full flower, very conspicuous; blooms nearly all summer. Beautiful plant when grown in clumps.
B. hybrida. Dark blood-red flowers, fine bloomer; flowers not so large as *Grandiflora*. Hardy at Boston, Mass.
B. speciosa. Flowers pink, striped purple; blooms profusely in spring. Not hardy north of Savannah. EACH 10
 From 4-in. pots.....\$0 50 \$4 00
 From 3-in. pots..... 25
B. venusta. Flowers rich orange, produced in great abundance during winter. A conservatory plant for this section, but desirable for Florida and southward. Plants from 3-in. pots, 25 cts. each, \$2 for 10, \$17.50 per 100.

Clematis

SMALL-FLOWERING CLEMATIS

Clematis paniculata. Flowers white, star-shaped; produced during mid-summer and fall upon long shoots. In addition to its profusion of flowers, the latter are also very fragrant, and the foliage is handsome. A most desirable climber of shrubby habit. Perfectly hardy. EACH 10 100
 Extra-strong field-grown plants.....\$0 50 \$4 00
 Strong plants..... 25 2 00 \$15 00

LARGE-FLOWERING HYBRID CLEMATIS

Extra-strong, field-grown plants. EACH 10
 \$0 60 \$5 00
 Strong plants..... 50 4 00
Clematis Henryl. Large creamy white; free grower and bloomer. The finest white Clematis, and should find a place in every garden.
C. Jackmani. Large and intense violet-purple; free and abundant bloomer. This is the best and most popular of the large-flowering Clematis.
C. Mme Edouard Andre. Large violet-red. Strong grower, and free bloomer.
 Note.—Clematis do best in deep, rich soil. Soon as the plants are set out, supports on which to climb should be provided.

Elaeagnus reflexa. Climbing Elaeagnus

A most vigorous Japanese evergreen climber. A well-established plant will frequently make a growth of 15 to 20 feet in a single season. Leaves glabrous above and whitish beneath, densely overspread with yellowish and light brown scales, giving the entire surface a bronzy hue. The bark on the young growth is brown. A unique and excellent climber. EACH 10 100
 3 to 4 ft., from 4-in. pots, extra heavy.... \$0 75 \$6 00
 24 to 30 in., from 4-in. pots, very strong.. 50 4 00 \$30 00
 18 to 24 in., from 3-in. pots..... 25 2 00 17 50

Euonymus. Climbing Euonymus

Strong plants, 12 to 15 in., field-grown, EACH 10 100
 well branched.....\$0 25 \$2 00 \$15 00
 Nice 6- to 8-in. plants, 3-in. pots..... 20 1 50 10 00
Euonymus radicans (Climbing Euonymus). Low-trailing evergreen shrub, of most rapid growth; used for covering walls, stumps, etc.
E. radicans variegata (Variegated Climbing Euonymus). A beautiful climber with variegated leaves. Fine for covering walls and brick work.

Ficus repens. Climbing Fig

An evergreen climber with small, bright green leaves. This is an excellent plant for covering walls, rock and rustic work in greenhouses. Makes a dense, dark green covering. In protected situations the vine is hardy in Augusta. Strong plants, 2½-in. pots, 15 cts. each, \$1.25 for 10, \$10 per 100.

ORNAMENTAL DEPARTMENT

Gelsemium. Yellow Jasmine

Gelsemium sempervirens (Carolina Yellow Jasmine). Our native variety, with bright yellow, fragrant flowers, which are so profusely produced in early spring. Strong clumps, nursery-grown, 25 cts. each, \$2 for 10, \$15 per 100.

G. sempervirens flore pleno (Double Yellow Jasmine). A very rare sub-variety of our native Yellow Jasmine, with double flowers, which are produced in great profusion in early spring, and more sparingly in the fall. If grown in conservatory, flowers are produced nearly all winter. Very scarce. Plants from 3-in. pots 50 cts. each.

Hedera. Ivy

Hedera Algeriensis (Algerian Ivy). A very fine variety, with pretty green leaves of immense size. A rapid grower. A most conspicuous plant: not quite so hardy as the English Ivy.

3 to 4 ft., strong plants, from 4-in. pots	EACH	10	100
Strong plants, from 3-in. pots	\$0	50	\$3 50
H. Helix (English Ivy). Too well known to need description.		25	2 00 \$15 00
	EACH	10	100
3 to 4 ft., very heavy, from 3-in. pots	\$0	25	\$2 00 \$15 00
Strong plants, from 2½- and 3-in. pots		15	1 50 10 00

Kadsura Japonica

A very desirable evergreen Japanese climber. Leaves large, dark green; flowers inconspicuous. In autumn the fruit assumes a scarlet tinge. Strong plants, from pots, 50 cts. each.

Lonicera. Honeysuckle

Very heavy, 3 yrs., bushy	EACH	10	100
Strong 2-yr. plants	\$0	35	\$3 00 \$20 00
		25	2 00 15 00

Lonicera aurea reticulata (Golden-netted Honeysuckle). A remarkable variety; leaves bright green, beautifully netted all over with golden veins; leaves and stems changing to bright crimson in the autumn. A beautiful plant.

L. Belgica (Belgian, or Monthly Fragrant Honeysuckle). Pink flowers, very sweet, profuse; an almost perpetual bloomer. Can also be trained as a bush.

L. Brownii (Scarlet Trumpet Honeysuckle). A strong, rapid grower, with orange-scarlet flowers. An improvement upon our native Coral Honeysuckle (*L. sempervirens*).

L. Chinensis (Chinese Honeysuckle). A showy variety, with purplish evergreen foliage, changing to greener shade at maturity. Flowers white, tinged with purple on outside.

L. Heckrotti. (Heckrott's Honeysuckle). Flowers rose-colored on the outside, yellow in the center. A most excellent variety. Blooms continually from early spring until winter.

L. Japonica (*L. Halleana*; Japanese Honeysuckle). A very vigorous evergreen climber; flowers white, changing to yellow, are borne in great profusion in summer, and sparingly in the autumn. Naturalized in many sections of the country. Good for trellises and ground covers.

Periploca. Grecian Silk Vine

A rapid-growing deciduous climber, with glossy green, lanceolate leaves; flowers brownish purple inside and green at the margin; blooms in August. Strong, 4-yr. plants, field-grown, 25 cts. each, \$2 for 10.

Wistaria

Rhynchospermum

Rhynchospermum. Malayan Jasmine

Strong plants, from 4-in. pots	EACH	10	100
Strong plants, from 3-in. pots	\$0	35	\$3 00 \$25 00
		25	2 00 15 00

Rhynchospermum Jasminoides (Malayan Jasmine). A very beautiful, hardy, and rapid-growing evergreen climber, producing from April until July fragrant white flowers. When in full bloom this plant is most conspicuous.

R. variegatum. A beautiful variegated creeping form of the above. Very effective for covering low walls or rockwork.

Roses, Climbing

Prices, our own selection of varieties:	EACH	10	100
1-yr. plants on own roots, strong, field-grown	\$0	25	\$2 00 \$15 00
1-yr. plants, budded on Manetti, strong, field-grown		35	3 00 25 00
2-yr. plants, budded on Manetti, extra-strong, field-grown		50	4 00 35 00

Solanum Jasminoides grandiflora

Potato Vine

Free-blooming and rapid-growing; flowers white; evergreen. Not hardy north of Augusta. An improvement upon the old variety. 25 cts. each, \$2 for 10, \$15 per 100.

Vinca. Periwinkle

Vinca major (Larger Periwinkle). An old and favorite plant, with large blue flowers, produced in early spring; leaves larger and a more vigorous grower than *V. Minor*; excellent for vases, rockwork and bordering slopes. Strong clumps, from open ground, 25 cts. each, \$1.50 for 10, \$10 per 100.

V. Major variegata (Variegated Periwinkle, or Trailing Myrtle). Same as the above, except that the leaves are beautifully variegated with silvery white; excellent for vases, and window-boxes. From 3-in. pots, 25 cts. each, \$2 for 10, \$17.50 per 100.

V. Minor (Common Periwinkle; Running, or Trailing Myrtle). A well-known old-time evergreen trailing plant. Flowers blue; leaves dark green, but smaller than *V. Major*. Strong clumps from open ground, 25c. ea., \$1.50 for 10, \$10 per 100.

Wistaria

	EACH	10	100
4 yrs., extra heavy, grafted	\$1	00	\$8 00
3 yrs., heavy, grafted		50	4 00 \$35 00
2 yrs., grafted		25	2 50 20 00

Wistaria Chinensis (Chinese Purple Wistaria). The well-known purple-flowering variety.

W. Chinensis alba (Chinese White Wistaria). A white-flowering variety; a beautiful, graceful climber.

W. Chinensis flore pleno (Double Purple Wistaria). A variety with very double purple flowers. Until the vine is three years old it is a shy bloomer, but afterward it becomes floriferous.

W. frutescens magnifica. Own roots. Flowers in large tassels, pale blue, with a yellow center; blooms about a month later than the Chinese varieties; also produces flowers during the summer. Extremely vigorous.

W. multijuga (Japanese Wistaria). A remarkably distinct and showy variety. Flowers light purple, in loose, drooping racemes, 1 to 3 feet long. Widely cultivated in Japan.

Wistaria, Standard or Tree Form. These are specimens which have been trained to standard or tree shape. They have stems from 3½ to 5 feet, and well-formed heads. These are usually imported from Europe and Japan, but we offer a beautiful lot of our own propagation of white, purple, double purple and Multijuga, at from \$1.50 to \$3 each.

ORNAMENTAL DEPARTMENT

ORNAMENTAL HEDGE PLANTS

Not less than 40 plants will be furnished at the prices quoted for 100, or 400 at the 1,000 rates

Berberis Thunbergii Thunberg's Barberry

A beautiful dwarf Barberry from Japan. Has small, bright green foliage, changing to coppery red in autumn. Retains its leaves for a long time. Makes a most beautiful and conspicuous low-growing hedge. Strong, well-branched plants, 18 to 24 in. high, \$2 for 10, \$15 per 100.

Buxus suffruticosa. Dwarf Box

This old favorite is in great demand for edging. We offer a superb lot of plants.

100	1,000
6 to 8 in., very bushy, 3 to 4 in. in diameter.....	\$10 00 \$80 00
4 to 6 in., bushy.....	8 00 60 00

Cerasus Caroliniana (Prunus Caroliniana)

The Mock Orange of the South

This well-known hardy evergreen makes a beautiful hedge. We offer a fine stock of young plants. Large plants are difficult to transplant, unless defoliated, and it is desirable to cut back severely the young plants when transplanting. The plants should be set one foot apart, but if used for a screen they could be set 18 inches apart. 1-yr. seedlings, 6 to 12 in., \$3 per 100, \$15 per 1,000.

Cydonia Japonica (Pyrus Japonica) Japan Quince, or Fire Bush

This is a very desirable hedge plant where a blooming hedge is desired

100	1,000
Strong plants, 3½ to 4 ft., well branched.....	\$20 00 \$125 00
Strong plants, 2 to 3 ft., well branched.....	12 00 70 00

Citrus trifoliata

Japan Hardy Orange; Trifoliolate Orange

This popular plant was first disseminated by us, and is the coming hedge plant for defensive, as well as ornamental purposes. Far more desirable than Osage Orange. It is hardy as far north as New Jersey, and if planted in good soil an impenetrable hedge can be had three years from planting. It is, so far, entirely free from insect depredations and fungous diseases. In early spring, when covered with myriads of white flowers, nothing is more attractive, and while not an evergreen, the vivid green wood makes it appear bright during the winter. Plants may be set one foot apart. Our hedges of this plant were the first planted in the United States, and make an impenetrable barrier for anything from a rabbit to an elephant. Hedges of this plant require two or three annual shearings, the first about the middle of May and the others while the young growth is tender. If delayed until the wood is hardened, it will require more time and increased labor. An excellent hedge knife can be made by taking a 28-inch scythe blade, straightening

the shank, and riveting it to a 14- or 18-inch, straight wooden handle.

100	1,000
18 to 24 in., heavy, branched, 2 yrs.....	\$4 00 \$30 00
12 to 18 in., 1 yr.....	3 00 15 00

Ligustrum. Privet

Ligustrum Amurense (Amoor River Privet). The true variety. This far surpasses any other evergreen privet. It does well in many sections of the North and East. For the South it is far superior to the California Privet, which loses its leaves during winter, whereas the Amoor River Privet retains its bright colored foliage throughout the entire year. Since 1866, we have cultivated and disseminated millions of the Amoor River Privet, and it is without doubt the most popular evergreen hedge plant of the day. It is of rapid growth, adapts itself to almost any soil not too arid or extremely wet. If properly treated, a hedge may be secured in two years after planting.

100	1,000
Well-branched, transplanted plants, 24 to 30 in.,	\$5 00 \$40 00

Note.—To save freight, we always cut back Amoor River Privet before shipping, unless instructed to the contrary. This also avoids any possibility of the plants heating, should there be any delay in transit.

We offer a fine lot of 2-yr., compact plants, several times trimmed, 12 to 15 in. high, at \$15 per 100. These have been trimmed several times during the summer, and are in fact established plants. If planted one foot apart, you can have a 12- to 15-in. hedge immediately.

L. ovalifolium (California Privet). This is a very popular variety for hedges North and West. Leaves larger and growth more erect than *L. Amurense*.

100	1,000
24 to 30 in., well branched, 2 yrs.....	\$4 00 \$30 00
18 to 24 in., branched.....	3 00 25 00

How to Make a Privet Hedge

Prepare the ground by plowing or spading to the proper width and depth. Open the trench 12 inches wide by 15 inches deep. Apply to this a liberal amount of well-rotted stable manure, and if this is not available, bone meal or some high-grade fertilizer. Mix the manure or fertilizer thoroughly with the soil. Set the plants in a straight line in the trench one foot apart. Set the plants about one inch deeper than they originally stood in the nursery row. Firm the earth well about the roots, level off, and then cut the plants back to within 4 inches of the ground. In the spring after the plants have made a growth of 6 or 8 inches cut off one-half of this growth, both side and top, and proceed in a like manner with each succeeding growth, until your hedge has reached the desired height and width. At all times, keep the plants well cultivated and free from grass and weeds.

Spiraea Thunbergii. Thunberg's Spiraea

Of dwarf habit; branches slender and drooping; foliage very narrow, light green, changing to bright orange and red in fall; flowers small, white, which appear very early in March and last three weeks. A beautiful variety for a dwarf or low-growing hedge. 2 yrs., 12 to 15 in., bushy, \$15 per 100.

ORNAMENTAL GRASSES

ALL HARDY IN THIS LATITUDE

These are very effective for bedding purposes. All are exceedingly graceful and have large, plummy heads. When planted in masses or groups, their great value is brought out.

Arundo donax variegata Variegated Giant Reed

A hardy, vigorous perennial. Leaves very long, longitudinally striped with green and creamy white. A very striking plant. Strong plants, 25 cts. each, \$2 for 10.

Eulalia

	EACH	10	100
Large clumps, from open ground, 12 in.	\$1 00		
Strong plants from 3-in. pots.....	25	\$2 00	\$12 50

Eulalia Japonica univittata. With narrow foliage and a narrow stripe running the entire leaf.

E. Japonica variegata (Striped Eulalia). A variegated hardy grass from Japan. In appearance it somewhat resembles the ribbon grass while in a young state. It forms compact clumps 6 feet in diameter. Its flower-stalks are very graceful and numerous and we highly recommend it as a very ornamental grass.

EULALIA. continued

Eulalia Japonica zebrina (Zebra-striped Eulalia). Similar in habit to the above, but with its leaves blotched with gold. The stripe, instead of running longitudinally like the former, runs across the leaf.

Gynerium. Pampas Grass

	EACH	10	100
Extra-heavy clumps from open ground, 12 to 18 in.	\$2 00		
Strong plants, from 3- and 4-in. pots.....	25	\$2 00	\$15 00

Gynerium argenteum (White Pampas Grass). With silvery plume-like spikes of flowers. An old favorite for grouping on the lawn.

G. Roi des Roses (Pink Pampas Grass). Plumbeous very compact, of a delicate rose color; very free-blooming and compact-growing. New variety. A very beautiful and valuable addition to the Ornamental Grasses.

Group of our Specimen Conifers

CONIFEROUS EVERGREENS

It is a well-established fact that we grow the largest and most varied stock of Coniferous Evergreens in the Southern States, and especially such varieties as are best adapted to this climate. We also grow large quantities of many of the hardy varieties which are adapted to the East and West. In our collection of Biotas, Cupressina, etc., are found many rare and valuable sorts. Our conifers are grown in the most careful and scientific manner. Nearly all of the open-ground plants have been grown one year in pots, and then set in the open ground, and are afterwards several times transplanted. Therefore, we can offer to our patrons plants with excellent root systems. Many varieties of conifers are grown in the open ground during the summer, lifted in the early fall and potted, and, before being shipped, plants have already started new roots. All plants, both from open ground and pots, are shipped with a ball of earth around the roots, same being wrapped in burlaps or moss.

In transplanting these Evergreens it is not necessary to remove this wrapping of burlap. Place the plant in the properly prepared hole, and merely cut the burlap in several places with a knife. Water it and firm the earth well about the roots. The best seasons for transplanting are from November to December and from February to March, but in the lower sections, where the ground does not remain frozen during the winter, planting can be successfully done any time when the ground is in proper condition. We have a superb lot of shapely specimen plants of many varieties of conifers. These are from ten to twenty years of age and have been several times sheared and transplanted, and those desiring immediate effect will secure it by using the above-mentioned specimens. The pictures on page 41 will convey an idea of the beauty of these specimens. The prices vary from \$5 to \$100 each, according to size

Special Collection of Conifers. We will supply 10 fine plants, distinct varieties, our selection, 12 to 24 in., for \$4, or 100 fine plants in 25 or 30 varieties, our selection, for \$25.

Abies, Fir

Abies Frazeri (Frazer's Balsam Fir; "She" Balsam of the Southern Alleghany Mountains). Of erect pyramidal growth; foliage dark, shining green. Thrives best in the upper sections of the South.

	EACH	10
2 to 2½ ft.....	\$1 00	\$8 00
18 to 24 in.....	50	4 00

A. pectinata (European Silver Fir). A tall-growing tree, and one of the oldest in cultivation. Leaves dark green above and silvery beneath. A most valuable and handsome variety. 12 to 15 in., strong, pot-grown, 50 cts.

Arborvitae. Biota and Thuja

ASIATIC SECTION

Biota aurea conspicua. A variety originated by us. Of compact, erect and symmetrical habit. Foliage intense gold, some of its branches being of a solid metal tint, others suffused with green. The original plant, now standing in our grounds, measures 22 feet high, with a diameter of 4 feet. Perfectly hardy at New York.

	EACH	10	100
5 to 6 ft., beautiful compact specimens	\$5 00	\$45 00	
4 to 5 ft., beautiful compact specimens	4 00	35 00	
30 to 36 in., compact specimens	1 25	10 00	\$80 00
24 to 30 in., compact specimens	75	6 00	50 00
18 to 24 in.	50	4 00	35 00

B. aurea nana (Berckmans' Golden Arborvitae). The ever-increasing demand for this, the most popular of all Biotas, shows the great popularity of this plant. Originated by us. As photograph shows, it is of very dwarf, compact and symmetrical habit; a perfect gem for small gardens or cemetery lots. It far surpasses, in every way, its parent, the old *Biota aurea*.

Biota aurea nana

ORNAMENTAL DEPARTMENT

Cupressus Lawsoniana (see page 39)

ARBORVITAE, continued

Biota aurea nana, continued

For window-boxes and vases this plant is most effective. It is certainly desirable where it is too cold for palms and other decorative plants. For formal gardens it is a great favorite. In many sections it has stood a temperature of 10 degrees below zero without injury.

	EACH	10	100

Cedrus Deodara

ORNAMENTAL DEPARTMENT

Cupressus. Cypress

Of this species we grow several varieties, which are well adapted to the middle and sub-tropical sections of the South. They are graceful, rapid-growing trees, varying in habit and growth, from feathery, drooping branches to others of more erect and formal shape.

We offer the following varieties: **Corneyana, Elegans, Funebris, Glauca, Majestica.**

Prices, except where noted EACH
 Extra-heavy specimens, 6 to 7 ft., from tubs.....\$3 00
 Very heavy specimens, 5 to 6 ft., from 10-in. pots..... 2 00

C. Lawsoniana. These are exceedingly valuable trees; habit of growth varies according to sub-varieties—some are very compact, others drooping or pyramidal; foliage ranging from dark green to glaucous and golden tints. Maximum height, 10 to 30 feet. EACH 10 100
 4 to 5 ft., compact specimens.....\$2 00
 3 to 4 ft., compact specimens..... 1 50

 24 to 30 in., compact..... 75 6 00 50 00
 18 to 24 in., compact..... 50 4 00

C. sempervirens pyramidalis (Oriental, or Italian Cypress). This well-known and popular conifer is most desirable where a formal effect is desired. It is of compact and shaft-like habit; ultimate height, 60 to 80 feet. EACH 10
 Strong plants, 7 to 8 ft., from tubs.....\$4 00
 Strong plants, 6 to 7 ft., from pots..... 3 00
 Strong plants, 5 to 6 ft., from pots..... 1 50
 Strong plants, 4 ft., from pots..... 75 86 00
 Strong plants, 30 to 36 in., from pots..... 50 4 00

C. sempervirens Royalii (*C. Whitleyana*). The most compact and shaft-like of the Cupressus. Forms a main stem from which very small branches radiate. A very distinct and desirable species; grows to a height of 50 to 60 feet. EACH 10

Strong plants, 3 to 4 ft., from pots.....\$0 75
 Strong plants, 2 to 3 ft., from pots..... 50 \$4 00

C. variegata (*Chamaecyparis*; Variegated Cypress). A beautiful variety, with foliage with golden variegations. A very distinct and conspicuous tree. Growth somewhat open. EACH

24 to 30 in., fine specimens.....\$1 00

Juniperus. Juniper Tree

This splendid group of conifers is becoming very popular. Trees are of easy growth, hardy and long lived. They are most effective for landscape planting. The different tones of green are very pleasing when planted in groups, using the taller varieties for the background, and graduating the plants until the creeping forms are in front, producing an exquisite effect.

Juniperus communis (English, or Common Juniper). A most desirable variety, with spreading or erect branches, frequently forming a tree 30 to 40 feet high. A beautiful Juniper and one of the best grown. EACH 10 100

6 to 7 ft., very heavy, compact specimens.....\$3 00 \$25 00

A fine, graceful, tall-growing tree of compact habit. Foliage dark green; very hardy and one of our most desirable conifers. Far superior to the Common Hemlock. EACH 10
 18 to 24 in..... \$1 00 \$8 00
 12 to 18 in..... 50 4 00

SPECIMEN CONIFERS

Below we give a list of some very fine specimen conifers which have been several times sheared and transplanted. In transplanting, all of these specimens are lifted with a large ball of earth about the roots. (See photograph.) This ball of earth is carefully wrapped with moss and burlap, thus ensuring success in transplanting.

The increasing demand for these large conifers speaks for the popularity with which they have been received. Many of the plants which we offer are twenty years of age. The accompanying photographs will give some idea of the symmetry and size of plants we offer.

Transplanting a large Conifer

SPECIMEN CONIFERS, continued

Those desiring immediate landscape effect will make no mistake in securing these conifers. We guarantee that a personal inspection will be satisfactory to all visitors. In carload lots we can secure a very low rate of freight.

Sub-Tropical Division

FRUIT-BEARING AND ECONOMIC SUB-TROPICAL TREES AND PLANTS

The exportation of our nursery products to Cuba, Porto Rico, the West Indies, South America, Mexico, and other foreign countries, has increased so rapidly during the past few years that we are warranted in saying that they are well adapted to those sections and have given satisfaction. We include in this division such fruit trees and plants as are grown especially for tropical and sub-tropical countries. The periods of maturity vary more or less, according to localities.

Camphor Tree

Acacia farnesiana (Popinac)

A well-known and popular plant. Branches thorny; foliage with minute leaflets; flowers in round yellow balls; very fragrant. A profuse bloomer. 24 to 30 in., from 3- and 4-in. pots. 25 cts. each, \$2 for 10, \$17.50 per 100.

Apples

Description and prices on pages 6 and 7.

Early-ripening varieties are recommended for extreme southern sections.

SELECT LIST

Early Harvest	Horse	Red Astrachan
Early Red Margaret	Kansas Queen	Red June
Homixy	May Pippin	Yellow Transparent

Apricots

Description and prices on page 7

Camphor (Cinnamomum camphora)

The Camphor Tree

We have a large stock of pot-grown plants, which can be shipped and transplanted at any time. Plants grown in open ground do not transplant readily. This tree is perfectly hardy at

Augusta, and does well along the South Atlantic and Gulf coasts. It is a handsome evergreen, with bright, shiny leaves. Will do well on poor soil, but will make a more satisfactory growth when properly fertilized. It is being planted in large quantities for producing the gum camphor of commerce. EACH 10 100
24 to 30 in., well branched, pot-grown... \$0 35 \$3 00 \$25 00

Pomegranates

Description and prices on page 14

Psidium. Guava

Psidium Cattleianum (Red Cattle Guava). A small tree or tall bush, producing the well-known Cattleya Guava.

- | | | | |
|--|--------|--------|---------|
| 24 to 30 in., from 4-in. pots, well branched | \$0 40 | \$3 00 | \$25 00 |
| 12 to 15 in., from 3-in. pots | 25 | 2 00 | 15 00 |

P. lucidum (Yellow Cattle Guava). Fruit a little larger than the Red Cattle, sweeter and of much better quality. Very refreshing when eaten raw. Wonderfully prolific. The best of all for jellies.

- | | | | |
|--|--------|--------|---------|
| 24 to 30 in., from 4-in. pots, well branched | \$0 40 | \$3 00 | \$25 00 |
| 15 to 18 in., from 3-in. pots | 25 | 2 00 | 15 00 |

CITRUS FRUITS

Oranges, Kinkans, Lemons, Etc.

After many years' test, we can unhesitatingly recommend Citrus Fruits budded upon *Citrus trifoliata* (Hardy Orange), this stock being particularly desirable for the colder sections of the Orange Belt, and all varieties of Citrus budded upon it will stand more frost than when budded upon any other stock. Varieties budded on it bear at an early age, and trees grow off as rapidly as those budded upon sour orange or rough lemon stocks, when planted in open ground. The fruit also ripens earlier than the same variety grown on other stocks. These plants are most desirable for growing in tubs in greenhouses and conservatories. The increasing demand for our plants speaks for itself. All plants are shipped with a ball of earth about the roots. For distant shipments the plants should be defoliated. In this manner the growth is not checked.

Kinkan, or Kumquat

This plant is of dwarf growth, seldom exceeding 6 to 8 feet, and very compact; fruit about the size of a small plum; rind sweet; juice acid. It can be eaten whole and is very refreshing. Excellent preserves are made from this variety. Exceedingly productive and an excellent plant for growing in pots. Will stand winter in open ground in Savannah if protected.

- | | |
|---|------------------------|
| Marumi —Round. | Nagami —Oblong. |
| 2 yrs., grafted plants, 12 to 15 in., well branched | EACH 10 |
| 2 yrs., grafted plants, 10 to 12 in., well branched | \$0 75 \$5 00 |
| | 50 3 50 |

Lemons,

Lemon, American Wonder, or Ponderosa. On own roots.

- We have a fine stock of well-branched specimen plants, bearing size.
- | | |
|---|-------------|
| 30 to 36 in., very bushy, from 9- and 10-in. pots | EACH \$2 00 |
| 24 to 30 in., very bushy, from 6- and 8-in. pots | 1 00 |
| 18 to 24 in., bushy, from pots | 75 |
| 15 to 18 in., bushy, from pots | 50 |

Note—This is a remarkable variety; exceedingly prolific; produces fruit often weighing 2½ to 3 pounds. Fruit is of excellent quality. No better plant for house culture.

Oranges

DeColmar, Maltese Blood, Mandarin, Dancy's Tangerine, Washington Navel, etc.

- | | |
|--------------------------|---------------------|
| 24 to 30 in., very bushy | EACH \$1 50 |
| 20 to 24 in., very bushy | 1 00 \$7 50 \$60 00 |
| 15 to 18 in., very bushy | 75 6 00 |
| 12 to 15 in., bushy | 50 4 50 40 00 |

Satsuma (Oonshiu). A variety of the Mandarin Orange. It is the hardiest of the orange family, and when thoroughly dormant has stood at Augusta a temperature of 12 degrees above zero. We however advise protection during winter in this locality.

- | | |
|---------------------|--------------------|
| 20 to 24 in., bushy | EACH \$1 00 \$7 50 |
| 15 to 18 in., bushy | 75 6 00 |
| 12 to 15 in., bushy | 50 4 50 |

Otaheite (Chinese Dwarf Orange). Suitable for pot culture; plants of bushy habit, beginning to bloom when less than one foot in height. Fruit small, of inferior quality, but produced in great profusion. A very desirable variety for pots.

- | | |
|------------------------------------|--------------------|
| 15 to 18 in., well-branched plants | EACH \$0 75 \$6 00 |
| 12 to 15 in., well-branched plants | 50 4 00 |

Greenhouse Department

The increasing demand for hardy ornamental shrubs, plants, etc., in the past few years, has forced us to discontinue the growing of a general line of greenhouse and bedding plants, such as geraniums, heliotropes, coleus, etc., and the space heretofore devoted to these plants in our greenhouse is now used for producing such plants as azaleas, camellias, palms, citrus fruits, etc., in large quantities. We offer herewith a small collection of greenhouse plants, but these will be found to be of superior quality.

Allamanda Hendersonii

- | | |
|--------------------------------|---------------|
| Strong plants, from 3-in. pots | EACH 10 |
| | \$0 25 \$2 00 |
- A beautiful climber; almost perpetual bloomer; can be grown in pots and trained to a stake. Yellow flowers of enormous size.

Araucaria excelsa. Norfolk Island Pine

This noble conifer has succeeded in south Florida, and may be considered hardy in sections where the winter temperature does not fall below 25 degrees Fahr. There are few trees as beautiful. Foliage bright green and dense, on slightly pendulous branches; grows to a great height, but is at its best when of moderate size.

- | | |
|-------------------------------|-------------|
| 16 to 18 in., from 5-in. pots | EACH \$1 50 |
| 12 to 14 in., from 4-in. pots | 1 00 |
| 10 to 12 in. | 75 |
| 6 to 8 in. | 50 |

Asparagus

- | | |
|--------------------------------------|-------------|
| Extra-strong plants, from 6-in. pots | EACH \$1 00 |
| Extra-strong plants, from 5-in. pots | 75 \$5 00 |
| Extra-strong plants, from 4-in. pots | 50 3 00 |
| Strong plants, from 3-in. pots | 25 2 00 |

Asparagus plumosus nanus. A most graceful plant. The branches are slender and arching. Foliage is finer than the most delicate fern, and of a bright and very pleasing green.

A. Sprengeri. A new species, useful to grow in suspended pot or basket. Fronds attain 3 to 4 feet in length.

Araucaria excelsa

ORNAMENTAL DEPARTMENT

Ferns

- Nephrolepis Barrowsii** (Improved Ostrich Plume Fern). Of the Boston Fern character, but with the leaflets subdivided so as to form a perfect frond. These grow broad and heavy and are exceedingly handsome. They frequently measure 6 inches across. This variety, being a sport, is apt to revert to the original type, either as a whole or part of the plant. EACH
- Fine plants, from 6-in. pots. \$1 00
 - Fine plants, from 5-in. pots. 75
 - Fine plants, from 4-in. pots. 50
 - Fine plants, from 3-in. pots. 25
- N. Davalioides furcans** (Curled Sword Fern). A very distinct and beautiful variety; the fronds are long and broad, beautifully crested at the tops; feathery foliage. EACH
- Beautiful specimens, from 6-in. pots. \$2 00
 - Beautiful specimens, from 5-in. pots. 1 00
 - Fine plants, from 4-in. pots. 75
 - Fine plants, from 3-in. pots. 25
- N. exaltata Bostoniensis** (Boston Sword Fern). Fronds are erect and graceful; one of the best and most ornamental Ferns ever introduced. Of easy culture. EACH
- Beautiful specimens, from 10-in. pots. \$5 00
 - Beautiful specimens, from 8-in. pots. 3 00
 - Beautiful specimens, from 7-in. pots. 2 00
 - Beautiful specimens, from 6-in. pots. 1 00
 - Beautiful specimens, from 5-in. pots. 75
 - Fine plants, from 4-in. pots. 50
 - Fine plants, from 3-in. pots. 25
- N. Piersonii elegantissima**. A sport from the Boston Fern. The side pinnae being again sub-divided and standing at right angles to the midrib makes very beautiful fronds. Apt to revert to the original type. EACH
- Fine plants, from 6-in. pots. \$1 00
 - Fine plants, from 5-in. pots. 75
 - Fine plants, from 4-in. pots. 50
 - Fine plants, from 3-in. pots. 25
- N. Scottii** (Dwarf Boston Fern). This is similar to the Boston Fern in general characteristics, but is of dwarf growth and more compact. A very beautiful fern. EACH
- Beautiful specimens, from 5-in. pots. \$1 00
 - Beautiful specimens, from 4-in. pots. 75
 - Stocky plants, from 4-in. pots. 50
 - Fine plants, from 3-in. pots. 25

Franciscea eximia

A very beautiful shrubby plant, the flowers of which upon opening are of pale blue, ultimately turning white; very fragrant and profuse bloomer. EACH

- Strong plants, from 4-in. pots. \$0 50 \$4 00
- Strong plants, from 3-in. pots. 25 2 00

Ficus elastica. India Rubber Tree

This is the well-known and popular Rubber Plant. Unsurpassed for table and parlor decoration. All our plants are grown from top-cuttings and can be supplied by the thousand.

- Prices of Ficus elastica:**
- 18 to 24 in., branched, from 5-in. pots. \$1 00 \$8 00
 - 15 to 18 in., branched, from 5-in. pots. 75 6 00
 - 24 to 30 in., stocky, from 5-in. pots. 1 00 7 50
 - 18 to 24 in., from 4-in. pots. 75 6 00
 - 15 to 18 in., from 4-in. pots. 50 4 00 \$30 00

Hibiscus rosa sinensis

A magnificent plant for bedding or pot culture. Perfectly hardy in south Florida. In this section they should be bedded in open ground in April and potted off in October. The flowers are produced continuously during the entire summer.

- EACH 10 100
- Very strong plants, from 4-in. pots. \$0 50 \$4 00 \$30 00
 - Stocky plants, from 3-in. pots. 25 2 00 15 00
- Hibiscus Decorus**. Single rose.
H., Double Salmon.
H., Miniata. Vivid red; double. Very beautiful.
H., Peachblow. This is a fine, new variety. Color a most beautiful shade of clear pink; double.
H., Sub-Violaceus. Crimson-violet; double.
H., Versicolor. Crimson, mottled with white; single.

Jasminum. Jasmine

- EACH 10
- Very heavy, well-branched plants, from 4-in. pots. \$0 50
 - Heavy, well-branched plants, from 4-in. pots. 35 \$3 00
 - Strong, well-branched plants, from 3-in. pots. 25 2 00
- Jasminum, Grand Duke.** Double white; extremely fragrant.
J., Maid of Orleans. Semi-double; white; very fragrant.
J., Sambac (Arabian Jasmine). Flowers single, white; very fragrant; profuse bloomer.

Meyenia erecta

- EACH 10
- Very strong plants, from 4-in. pots. \$0 50
 - Strong plants, from 3-in. pots. 25 \$2 00
- Meyenia erecta alba.** A large shrub. Flowers large white, with yellow throat. Almost a perpetual bloomer. In middle Florida this plant is perfectly hardy and attains a height of 10 to 20 feet. A most beautiful plant.
M. erecta coerulea. Of same habit as *M. erecta alba*, but with flowers of intense violet, with rich orange throat.

Tabernamontana camasca

Cape Jasmine

An evergreen shrub, of dwarf habit, flowers resembling the Jasmine. White; very fragrant, and blooms during a long period. EACH

- Strong plants, from 4-in. pots. \$0 50
- Strong plants, from 3-in. pots. 25

Tecoma capensis (Climber)

Flowers bright red; blooms continually during the summer. A beautiful plant. Hardy south of Savannah. Strong plants, from 3-in. pots, 25 cts. each, \$2 for 10.

PALMS

During winter, our Palm houses are kept under as low a temperature as is consistent with the health of the plants, and the largest part of our stock is carried through the summer in slat houses, where they have free circulation of air and a clean and healthy growth, becoming thoroughly hardened off by fall. Our plants can, therefore, stand distant carriage without injury, and will rot suffer from the sudden change when removed from a high greenhouse temperature to that of a sitting-room.

All our Palms, being grown in pots, can be forwarded during the whole year. Measure is from top of pot to top of plant, in its natural position.

We would state that, as all varieties do not grow alike, we cannot quote plants of equal height at the same price. Some are of rapid growth, others affect a dwarf habit. Young plants of such varieties as Phoenix, Seaforthia and a few others, do not show their characteristic forms of foliage until the second year. The lowest prices refer to two-year-old plants, ranging from 10 to 12 inches, according to variety.

Cultural Directions.—Use a compost of equal parts of leaf-mold, rich garden soil and well-decayed cow-dung and some bone meal. Give drainage and keep plants in open air, but in partial shade during summer. Water regularly during summer. Keep soil only moist during winter and foliage free from dust. Repot large plants in February and smaller ones twice during summer. The varieties marked with an asterisk (*) are the most hardy and suitable for open ground in middle Florida; the others are for the conservatory and tropical countries.

Areca

- Areca lutescens.** One of the most beautiful and valuable Palms. Foliage graceful, bright green, with rich golden stems. EACH
- 30 to 36 in., from 6-in. pots. \$1 50
 - 24 to 30 in., from 6-in. pots. 1 00 \$9 00
 - 20 to 24 in., from 5-in. pots. 75 7 00
 - 18 to 20 in., from 4-in. pots. 50 4 00
 - 15 to 18 in., from 4-in. pots. 35 3 00
- A. lutescens.** We offer a fine lot of made-up plants, three plants in a pot. EACH
- 30 to 36 in., from 6-in. pots. \$2 50
 - 24 to 30 in., very bushy, 6-in. pots. 2 00 \$15 00
 - 20 to 24 in., very bushy, 5-in. pots. 1 00 9 00
 - 15 to 18 in., bushy, 4-in. pots. 50 4 00

Chamaerops

- *Chamaerops Canariensis.** Quite dwarf in habit, leaves bright green. A desirable variety. EACH
- 18 to 24 in., from 5-in. pots. \$0 75 \$6 00
 - 15 to 18 in., from 4-in. pots. 50 4 00
- *C. Fortunel, or excelsa** (Chusan Fan Palmetto). The hardest of all exotic palms. Stands a cold of several degrees below freezing. Grows to a height of 10 to 15 feet. Does best in a rich and partially shaded situation. EACH
- 15 in., extra-strong plants. \$0 75 \$6 00
 - 12 to 15 in., strong plants. 50 4 00
- *C. gracilis.** A very graceful variety, with deeply cut, fan-shaped leaves. EACH
- 18 to 24 in., from 5-in. pots. \$0 75 \$6 00
 - 15 to 18 in., from 4-in. pots. 50 4 00

ORNAMENTAL DEPARTMENT

***Cycas revoluta. Sago Palm**

A valuable decorative plant, both for garden and house. We have a beautiful stock of this old favorite. Hardy at Charleston. EACH
 Stems 4 in. in diam., 8 to 10 perfect leaves. . . . \$2 50
 Stems 4 in. in diam., 6 to 8 perfect leaves. . . . 1 50
 Stems 3½ to 4 in. in diam., 5 to 6 perfect leaves. . . 1 00

Kentia

Kentia Belmoreana (Howea, or Curled-leaf Palm). A most graceful variety, with beautiful, drooping foliage. Decidedly the most popular palm grown. 12 to 15 in., 4 to 5 characterized leaves, from 3½-in pots, 50 cts. each, \$4 for 10.

K. Forsteriana (Thatch-leaf Palm). The most robust of the genus; leaves broader than those of *K. Belmoreana*. Stems often of a reddish cast. EACH 10

18 to 20 in., several characterized leaves, from 4-in. pots. \$1 00
 15 to 18 in., several characterized leaves, from 4-in. pots. 75
 12 to 15 in., several characterized leaves, from 3-in. pots. 50 \$4 00

***Cocos campestris**

Leaves spreading, recurved; segments narrow, lanceolate. 24 to 30 in., from 4-in. pots, 50 cts. each, \$4 for 10.

***Latania borbonica. Chinese Fan Palm**

The most popular of all fan-leaved Palms. Very desirable for all decorative purposes. EACH 10 100

24 to 30 in., 5 to 6 characterized leaves, 8-in. pots. \$1 50
 20 to 24 in., 5 to 6 characterized leaves, 5-in. pots. 1 00
 18 to 20 in., 4 to 5 characterized leaves, 5-in. pots. 75 \$6 00 \$50 00
 15 to 18 in., 4 to 5 characterized leaves, 4-in. pots. 50 4 00 30 00
 12 to 15 in., 2 to 3 characterized leaves, 4-in. pots. 35 3 00 25 00

Pandanus. Screw Pine

Among the foliage plants for home decoration and especially for use for fern-pans and table ornaments, none are more desirable than Pandanus. They are easily managed and thrive best in a soil composed partly of good loam and old cow manure. Water freely during summer, but keep plants moderately moist only during winter, as too much water at that season, and when plants are dormant, will cause them to decay. They should be kept under high temperature during winter. **Pandanus utilis.** With spiny, recurved green leaves, which assume a screw-like character. This is the most valuable for general purposes, either for vases or specimen plants.

Latania borbonica

Prices of Pandanus:

EACH 10
 24 to 30 in., very stocky, from 7- and 8-in. pots. \$2 00
 18 to 24 in., very stocky, 7-in. pots. 1 50 \$10 00
 15 to 18 in., very stocky, 5-in. pots. 1 00 7 50
 12 to 15 in., stocky, 4-in. pots. 75 6 00

Phoenix. The Date Palm

These make handsome plants for decorative purposes, being the stateliest of all the Palms, of robust and rapid growth. An exceedingly distinct and popular genus.

***Phoenix reclinata.** A valuable variety of robust and compact growth. Of great decorative merit. Glossy, dark green foliage. The most valuable of all the Phoenix. EACH 10

24 to 30 in., several characterized leaves, 6-in. pots. \$1 00
 20 to 24 in., several characterized leaves, 5-in. pots. 75 \$6 00
 15 to 18 in., 3 to 4 characterized leaves, 4-in. pots. 50 4 00

P. rupicola. This is the most graceful of all the Phoenix. It has the wide-spreading, arching, pinnate leaves, broadly lance-shaped in outline, with long, narrow pinnae. Dwarf habit. 12 to 15 in., showing character, from 4-in. pots, 50 cts. each, \$4 for 10.

***Washingtonia filifera. Weeping Palm**

Leaves fan-shaped, with numerous divisions and whitish filaments. An exceptionally handsome Palm 15 to 18 in., from 3½-in. pots. 25 cts. each, \$2 for 10.

OUR POPULAR SPECIAL COLLECTION OF PALMS

These special collections are of good value and have never yet failed to please the purchaser. We will supply the following collections of Palms, selection to be left with us:

10 varieties, 2 yr. old, 12 to 18 in. high. \$3 00
 10 plants in 5 varieties, 3 yr. old, 18 to 24 in. high. 6 00
 10 plants in 5 varieties, 4 to 5 yr. old, 24 to 30 in. high. 8 00

Those unfamiliar with Palms will do well to allow us to select for them, as our experience enables us to send out plants which will be most hardy and effective, and show the greatest distinction in any location.

Roses

FOR OPEN GROUND CULTIVATION

For years we have made the growing of field-grown Roses one of our specialties. We test the majority of the new sorts, and in two years' test they do not measure up to our standard they are discarded. Therefore, those which we offer are worthy of a place in the garden. Our soil is especially adapted to the best developments of the Rose, and our one-year, field-grown plants equal the two-year plants of Northern and Western growers.

DIRECTIONS FOR PLANTING, PRUNING AND FERTILIZING

Any good garden soil is suitable, but should be well fertilized with decomposed stable manure. Keep the soil free from weeds and stir frequently during the summer. Mulching in fall with stable manure is beneficial. A small amount of bone meal or good fertilizer applied in summer is advisable.

When Planting, cut off all but two or three of the strongest branches; cut these back to 3 inches. Plants thus cut back will transplant better and produce finer flowers.

Pruning.—After the first killing frost, most of the varieties should have two-thirds of the past year's growth cut off. As a general rule, the more vigorous the variety, the less it should be pruned. Remove all decayed wood. Climbing Roses should have only their side branches shortened in; do not disturb the main stem.

We frequently receive complaints from our patrons who order late in the spring; they state the flowers produced on their Roses are very inferior and do not come up to description. We would state that perfect flowers cannot be expected from plants set out late in February or March, and which produce blooms before they are well established. But if these plants are allowed to grow until the following fall, and if they receive the proper treatment, there will be no cause for complaint.

Effective planting of Roses in the South

ROSES, continued

Insects.—For aphids, thrips, and other insects infesting Roses, spray plants with a solution of sulpho-tobacco soap.

For Rose-Slug, spray with hellebore or insect powder. For rose-leaf hopper, spray with insect powder, tobacco decoction or kerosene emulsion.

Mildew.—This is caused by extremes of heat and cold, or by a continuance of damp, cold weather. Sprinkle the plants with water and dust them with sulphur or soot, or spray with Bordeaux mixture.

Note.—The letters following each Rose denote the class to which it belongs, viz.: (T.) Tea, (H.T.) Hybrid Tea, (C.) China, (H.P.) Hybrid Perpetual, (N.) Noisette, (P.) Polyantha, (R.) Rugosa, (W.) Wichuraiana.

NEW ROSES

We offer the following new Roses on own roots. Strong, 1-year field-grown plants at 50 cts. each, \$4 for 10

Alice Roosevelt. (H. T.) A very vigorous grower and free bloomer. Deep rose color. A sport of Mme. Abel Chatenay. A fine Rose.

Blummenschmidt. (H. T.) Pure citron-yellow, outer petals edged tender rose. A sport from Francisca Kruger, which it resembles in form.

Catherine Zeimet. (P.) Double White Baby Rambler. This is a pure double white form of Baby Rambler, which grows to a height of about 20 inches; of very compact growth. Perpetual bloomer.

Celia. (H. T.) Flowers large and full, petals reflexed; vigorous grower; color pure carnation-pink.

Chateau des Clos Vougeot. (T.) A most beautiful velvety crimson, blooming continuously in crops closely following each other.

Col. R. S. Williamson. (T.) Satin-white with deep blush center; blooms very large, full, of perfect form, with high, pointed center. A fine Rose.

Dean Hole. (H. T.) Deep salmon-pink, with buds of great length. A vigorous and free-blooming variety.

Dr. Campbell Hall. (T.) Coral-rose, suffused white, base of petals yellow. Flowers large, full and well formed.

Entente Cordiale. (T.) A charmingly beautiful Rose, of magnificent size and form. Buds long and pointed, on long, stiff stems; flowers large and full, creamy white, with sulphur-yellow center.

Freiherr Von Marschall. (T.) A double form of Papa Gontier. Flowers large and full; color dark carmine-red; bud long. A very free and vigorous grower.

Grace Molyneux. (T.) Creamy apricot, flesh in center; a strong, free grower and very free in bloom. A fine garden Rose.

Laurent Carle (T.) A vigorous grower, of erect, branching habit. Bears on long stems, long, well-formed buds, which open into large, full flowers of brilliant velvety carmine.

Mlle. Simone Baumez. (H. T.) A vigorous grower; flowers very large, of fine form; delicate flesh, outer petals reflexed. A fine variety.

Mme. Maurice de Luze. (T.) Deep rose, with warm cochineal center, reverse of petals lighter. A vigorous grower.

Mme. Segond Weber. (T.) Rosy salmon; bud long and pointed, opening into an enormous bloom which deepens in color as it expands. A fine, strong grower.

Mrs. A. R. Waddell. (T.) A strong, rampant grower with foliage that is ornamental in itself; buds long and pointed, rosy scarlet, opening coppery salmon; large and semi-double, a wonderful keeper. One of the showiest Roses extant.

Mrs. G. W. Kershaw. (H. T.) Buds long and pointed, of the most brilliant and intense pink. A very free bloomer.

Mrs. Conway Jones. (H. T.) Creamy white, flushed salmon-pink; flowers very large and full, of great size and substance.

Molly Sharman-Crawford. A fine pure white Rose. Foliage dark and heavy, with good, stiff, wiry stems, and blooms of fine size, fullness and build. A free and continuous bloomer.

My Maryland. (H. T.) Large, full, double flowers, salmon-pink; distinct and beautiful. A very popular new variety.

Paula. (T.) A vigorous, free Tea Rose, most deliciously fragrant; habit erect; buds well shaped; sulphur-yellow with other center.

Peerless. A beautiful Rose; color warm flesh, each petal edged deeper.

Princess Alexandra. (H. T.) Very large and full, perfect cupped form, opens well; very free; creamy white. Kaiserin type.

Reine Karola de Saxe. (T.) Flowers large; blush-white, with shadings of delicate pink. A very free bloomer.

Rhea Reid. (H. T.) One of the finest new Roses. A cross of American Beauty with a red seedling. A vigorous and rapid grower. As large as American Beauty; very double and fragrant; continuous bloomer. Beautiful shade of red. An excellent Rose in every way.

Wm. R. Smith. (H. T.) A seedling of Kaiserin Augusta Victoria and Maman Cochet. Very vigorous; color creamy white, with shadings of pink. A very free bloomer.

New Climbing Rose

Climbing Mme. Caroline Testout. (H. T.) A magnificent, free-blooming, Hybrid Tea of the very loveliest shade of pink; flowers large and full.

ORNAMENTAL DEPARTMENT

Bourbon, China, Hybrid Perpetual, Hybrid Noisette, Hybrid Tea, Polyantha, Rugosa and Tea Roses

- Alfred Colomb.** (H. P.) Bright red; large; globular.
- Bride.** (T.) Pure white.
- Bridesmaid.** (T.) The most popular Pink Tea Rose grown. A beautiful shade of bright pink. An improvement on Catherine Mermet, of which it is a sport.
- Christine de Noue.** (T.) Very free bloomer, large, handsome flowers and bright shining buds. Color a deep glowing red. Very sweet.
- Clothilde Soupert.** (P.) Flowers 1½ inches in diameter, beautifully formed; white, with rose or light carmine center; a constant bloomer; a desirable variety for cemeteries.
- Duchesse de Brabant** (Comtesse de Labarthe). (T.) Pink, shaded with carmine-rose. An old favorite.
- Etoile de France.** (T.) A very vigorous grower. Flowers very large, full, cupped; dark velvety crimson, center vivid cerise. A fine variety of recent introduction.
- Etoile de Lyon.** (T.) Golden yellow; vigorous; free bloomer.
- Gloire Lyonnaise.** (H. P.) Full; white; base of petals very light canary-yellow; very large.
- Gruss an Teplitz.** (H. T.) Bright crimson; very full; free bloomer. Very good.
- Helen Gould** (Balduin). (H. T.) Rosy pink; long, pointed buds. Fine.
- Kaiserin Augusta Victoria.** (H. T.) Creamy white; very double; buds large and pointed. Best white Tea grown.
- La France.** (H. T.) Silvery peach. One of the most popular Roses grown.
- Louis Van Houtte.** (H. P.) Vivid, velvety crimson; large full and of fine form; one of the best.
- Maman Cochet.** (T.) Deep rose-pink, inner side of petals silvery rose. Very double, extra-strong grower; fine bloomer. The finest Rose by far that has been introduced for a long time. We can confidently recommend it.
- Marie Pavie.** (P.) Pale rose, changing to white. This variety is unsurpassed for a low hedge, and nothing could be more desirable for cemeteries. It is the most profuse bloomer of all the Polyanthas, and is continually in bloom from early spring until frost. It is hardy in the northern states. Extra-strong plants, 12 to 15 in., \$15 per 100.
- Marie Van Houtte.** (T.) Pale yellow, edged rose. Very fine.
- Marshall P. Wilder.** (H. P.) Extra large, full flowers, dark deep red; free bloomer; very handsome.
- Mme. Camille.** (T.) Rosy salmon; very large; free bloomer.
- Mme. Caroline Testout.** A magnificent Hybrid Tea, of the very loveliest shade of pink.
- Mme. Francisca Kruger.** (T.) A fine bedding Rose, color coppery yellow, shaded with peach; large and full.
- Mme. Jules Grolez.** (H. T.) Satiny rose color; flowers large and very double; free bloomer.
- Madame Margottin.** (T.) This large and perfectly double Rose is considered a great favorite. The color of the flowers, which are very fragrant, is dark citron-yellow, with apricot shadings and red center; a strong grower and profuse bloomer.
- Mme. Plantier.** (H. N.) Bears thousands of pure white medium-sized flowers. Profuse bloomer in early spring only. Desirable for massing and as hardy as an oak.
- Meteor.** (T.) Splendid red, full and fragrant.
- Paul Neyron.** (H. P.) The flowers are immense, probably the largest and finest Rose; bright shining pink; clear and beautiful; very double and full; finely scented; blooms the first season and all summer; no collection is complete without this magnificent variety.
- Phyllis.** (P.) Grows to a height of about 2 feet, very bushy. Produces long, feathery panicles of very small, bright carmine-pink flowers, shading to white in center. Continuous bloomer. A fine Rose for bedding or massing.
- Prince Camille de Rohan** (H. P.) Deep, rich velvety crimson, passing to intense maroon, shaded black; at a short distance the flowers appear really black. One of the handsomest Roses, which is worthy of a place in every garden.
- Richmond.** (T.) One of the best Roses. Color crimson-scarlet; very free in growth and bloom. Extremely fragrant.
- Rugosa alba.** (R.) A white form of the well-known Rugosa Rose; flowers large, single white, which are followed by handsome glossy red berries.
- Rugosa rubra.** (R.) Same as *Rugosa alba* except that flowers are single crimson.
- Triumph de Pernet Pere.** (T.) Flowers large with broad, thick petals, and long pointed buds. Delicious tea fragrance. Clear magenta-red, passing to bright crimson.
- Ulrich Brunner.** (H. P.) Cherry-red; very large, fine form; extra good.
- Vicomtesse de Wautier.** (T.) Bright rose, tinted darker, dark rose center; free bloomer.
- White Maman Cochet.** (T.) Pure white, sometimes tinged blush. A superb Rose.
- Yellow Cochet.** (T.) A form of Maman Cochet, with light yellow flowers. An extra-fine sort.

Maman Cochet

Climbing Roses

- Cherokee.** The well-known single, white, spring-blooming variety of the South. Foliage bright glossy green.
- Clothilde Soupert, Climbing.** (P.) This variety originated in our nurseries. We have cultivated it for ten years and can recommend it with utmost confidence. In color and form it is similar to its parent, the well-known Clothilde Soupert, but flowers are larger. A constant bloomer after the first year, as it flowers best on old wood. Vigorous grower, and has resisted a cold of 20 degrees below zero. This is a great addition to our list of Climbing Roses, and is becoming one of the favorites.
- Crimson Rambler.** A vigorous-growing climbing Rose, producing a profusion of small, crimson flowers in trusses. It is a most showy plant while in bloom, during April and May.
- Dorothy Perkins.** This is said to be a hybrid of Wichuraiana and Madame Gabriel Luizet. It is a vigorous and rampant climber. The foliage is of a deep green leathery texture, and remains on the plant nearly all winter. The flowers are from 1 to 1½ inches in diameter. Borne in clusters of from 10 to 30, and very double, of a beautiful shell-pink color. Remains in bloom for several weeks. A most desirable new climbing Rose. Most effective for planting on terraces and slopes. Strong, field-grown plants, 25 cts. each, \$2 for 10, \$15 per 100.
- Lady Gray.** A new and most valuable variety of remarkable vigor. Flowers of a delicate cerise-pink, fading to soft tinted white. When the plant is in full bloom, it is most pleasing. Very desirable for covering banks and terraces, and can also be trained as a climber.
- Macartney** (*Rosa bracteata*). Flowers large, single, white, produced from June until fall. Handsome almost evergreen climbing sort. Frequently used for hedges.
- Philadelphia** (Rambler.) This variety is a cross between Crimson Rambler and the hybrid perpetual, Victor Hugo. Its color is deeper and brighter crimson, flowers larger and growth more erect than Crimson Rambler.
- Wichuraiana** (The Memorial Rose). Almost evergreen; flowers small, single, white; of trailing habit. Beautiful for planting on slopes and terraces, which it soon covers with a mass of bright green foliage.

ORNAMENTAL DEPARTMENT

ROSES BUDDED UPON MANETTI STOCK

1-year plants, budded low, 35 cts. each, \$3 for 10; when selection is left to us, \$12.50 for 50, \$25 per 100. We can supply strong, extra-heavy, 2-year plants, of most of the following varieties, at 50 cts. each, \$4 for 10

It is almost impossible to propagate some varieties of Roses upon their own roots, and unless these are grown upon Manetti their cultivation would have to be discontinued. Others produce finer flowers when budded or grafted upon the Manetti stock. They are especially desirable for Florida and warm climates, as their roots penetrate the soil to a great depth.

Budded Roses should be planted sufficiently deep so that the junction of the bud with the stock is from 2 to 3 inches below the surface of the earth. Do not overlook this.

The budded Roses should be carefully watched, and all suckers or shoots which grow out from below the place where the bud is inserted must be removed. If this is neglected, the stock will outgrow the bud and failure will surely follow.

The foliage of the Manetti is composed of from seven to nine leaflets, whereas Tea, Hybrid and Bourbon Roses usually have but five.

Bourbon, Hybrid Perpetual, Hybrid Tea and Tea Roses

- American Beauty.** (H. P.) Deep rose; large, cupped; fragrant; dwarf grower.
- Angelique Veysset.** (H. T.) (Striped La France). Similar to La France, but with flowers striped pink and white.
- Anna de Diesbach.** (H. P.) Clear, bright carmine-pink, very large, full and finely shaped; fragrant and a free bloomer.
- Bessie Brown.** (H. T.) A vigorous upright grower; flowers of good form, large size, creamy white, very fragrant. A free bloomer. A new variety of great merit.
- Captain Christy.** (H. T.) Blush, rosy center; large and full; very free bloomer.
- Devoniensis.** (T.) White, flesh center; an excellent and favorite old Rose.
- Doctor Henon.** (H. P.) Pure white; thornless; dwarf grower.
- Dr. Sewell.** (H. P.) Bright crimson, tinged with purple, large, full.
- Etoile de France.** (T.) A very vigorous grower. Flowers very large; full, cupped; dark velvety crimson, center vivid cerise. A fine variety of recent introduction.
- Etoile de Lyon.** (T.) Rich golden yellow; vigorous; free bloomer.
- Eugene Furst.** (H. P.) Strong, vigorous grower, with thick, healthy foliage. Flowers beautiful velvety crimson, shading to maroon. Highly scented.
- Fisher Holmes.** (H. P.) A very beautiful and valuable Rose; deep crimson, resembling General Jacqueminot, but a more constant bloomer. Form full and perfect, very sweet.
- Frau Karl Druschki.** (H. P.) Flowers very large, snow-white strong grower and free bloomer. A new German Rose that has made quite a sensation, and has also been called the White American Beauty. A magnificent Rose.
- Gloire de Dijon.** (T.) Yellow, shaded with salmon; large and full. A good old variety.
- Gloire de Brussels.** (H. P.) (Gloire de l'Exposition de Bruxelles). Very large, fine form; deep amaranth-purple; free bloomer and vigorous; one of the best new dark Roses and one that should be in every garden.
- Grand Mogul.** (H. P.) Purplish crimson; large and well-formed. A magnificent variety.
- Gross an Teplitz.** (H. T.) Bright crimson; very full; free bloomer; excellent.
- Helen Gould.** (H. T.) Rosy pink; long, pointed bud; very fine.
- Killarney.** (H. T.) A new Irish Rose, of a brilliant silvery pink. Flowers large; pointed buds; free bloomer and strong grower. Although quite new, it has taken a prominent place amongst our popular sorts.
- Kaiserin Augusta Victoria.** (H. T.) Creamy white; very double; buds large and pointed. Decidedly the best white Tea grown.
- Le Detroit.** (H. T.) Flowers of large size and form; beautiful rose-color beautifully shaded pink. A free bloomer.
- La France.** (H. T.) One of the best-known Roses. Silvery peach; excellent; weak grower.

- Margaret Dickson.** (H. P.) A fine Rose. Vigorous grower; flower white, tinted flesh near the center.
- Meteor.** (T.) Dark, velvety crimson. Vigorous grower and profuse bloomer.
- Mlle. Helene Gambier.** (T.) Rosy salmon, shading deeper; a reliable variety.
- Mme. Caroline Testout.** (H. T.) One of the best of the newer Roses. Of La France type, but clear pink; large; free bloomer. A great favorite where known.
- Mme. Jules Grolez.** (H. T.) Satiny rose; flowers large and very double; free bloomer.
- Marshall P. Wilder.** (H. P.) Cherry-carmine; free bloomer. Fine.
- Papa Gontier.** (T.) Brilliant carmine, tinted rose; finely formed buds.
- Perle des Jardins.** (T.) Bright yellow; very full and double. Best of its color.
- Pride of Reigate.** (H. P.) Crimson, handsomely striped white and sometimes half crimson and half white.
- Princess Imperial Victoria** (White Malmaison). (B.) Similar to Malmaison; flowers white tinted yellow; a vigorous and free-blooming sort.
- Ulrich Brunner.** (H. P.) Cherry-red; very large; fine form; extra good.
- Wassily Chludoff.** (T.) Carmine, changing to rose; a very strong grower and free bloomer.

Climbing Noisette and Climbing Tea Roscs

1-year-old plants, budded low, 35 cts. each, \$3 for 10; when selection is left to us, \$12.50 for 50, \$25 per 100. 2-year-old plants, strong, extra-heavy, of most of the following varieties, at 50 cts. each, \$4 for 10.

Can also supply a limited quantity of extra-strong plants of nearly all the following Climbing Roses, 6 to 8 feet, at 75 cts. each, \$6 for 10.

- Captain Christy.** (H. T.) Blush, rosy center large and full; very free bloomer.
- Chromatella.** (N.) Deep yellow. An old and favorite variety.
- Devoniensis, Climbing.** (T.) White, flesh center. Excellent.
- Elie de Beauvilain.** (T.) Soft rose, salmon center; vigorous grower; very good.
- Kaiserin Augusta Victoria, Climbing.** (T.) (Mrs. Robert Peary.) Similar to the bush form. Vigorous.
- Marie Guillot.** (T.) White, slightly tinted lemon; large; well-shaped. A fine climber.
- Marchal Niel.** (T.) Deep chrome-yellow. Always deeper in color and a better grower when budded. This is the most desirable of all the yellow Roses.
- Meteor, Climbing.** (H. T.) Dark, velvety crimson. Vigorous grower and profuse bloomer.
- Perle des Jardins.** (T.) Bright yellow, very full and double. Best of its color.
- Pillar of Gold.** (T.) Rosy pink, base of petals yellow. Variable in color. Sometimes almost solid pink. Free bloomer, rapid grower.
- Reine Marie Henriette.** (T.) Bright cherry-red. Of good form and vigorous habit. The best red climber.
- Reve d'Or.** (Climbing Safrano). (T.) Chamis-yellow; large; full; fragrant; free bloomer. An extra-fine climbing Rose.
- Solfaterre.** (N.) Light yellow; free bloomer.
- Souv. de la Malmaison.** (B. C.) A beautiful creamy form of this well-known Rose. Large and very full.
- Striped Reine Marie Henriette.** (T.) A sport of Reine Marie Henriette. Flowers bright cherry-red, striped white. A vigorous grower.
- Waltham No. 3.** (H. P.) Very fine spring- and autumn-blooming climber; dark crimson.
- Wm. Allen Richardson.** (T.) Orange-yellow, center coppery yellow.
- Wootton.** (H. P.) Bright magenta-red, richly shaded crimson, very double and fine climber.

Tree Roses

We have a very fine lot of strong imported Tree Roses, and offer ten or twelve of the best varieties of Teas, Hybrid Teas and Hybrid Perpetuals. Trees, grafted on stems, 2½ to 3 feet high, \$1 each.
